

Free PDF Quiz 2026 SAP - C-S4EWM-2023 Reliable Test Voucher

P.S. Free & New C-S4EWM-2023 dumps are available on Google Drive shared by TestkingPass: <https://drive.google.com/open?id=16Z6hgQCnlhwmhDrrYEmYmh47xIy54cakK>

We can proudly claim that you can successfully pass the exam just on the condition that you study with our C-S4EWM-2023 preparation materials for 20 to 30 hours. And not only you will get the most rewards but also you will get an amazing study experience by our C-S4EWM-2023 Exam Questions. For we have three different versions of our C-S4EWM-2023 study guide, and you will have different feelings if you have a try on them.

SAP C-S4EWM-2023 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Warehouse Management (Monitor - Cockpit): This topic involves monitoring warehouse activities using the Warehouse Management Monitor, Warehouse Cockpit, and analytical apps.
Topic 2	<ul style="list-style-type: none">System Integration, Master Data and Delivery Document Customizing: This focuses on setting up system integration, distributing master data, and customizing delivery documents.
Topic 3	<ul style="list-style-type: none">Cross Topics (Labor Management, Exception Handling, Batches, Serial Numbers): This topic includes setting up labor management and exception handling, and working with additional product information.
Topic 4	<ul style="list-style-type: none">Internal processing (Physical Inventory, Replenishment): This topic involves defining physical inventory processes and setting up and executing replenishment.
Topic 5	<ul style="list-style-type: none">Managing Clean Core: It covers evaluating and applying clean core principles to ERP to maximize business process agility, reduce adaptation efforts, and accelerate innovation.
Topic 6	<ul style="list-style-type: none">Process and Layout Oriented Storage Control: It covers creating customizing settings and using Process and Layout-Oriented Storage Control.

Updated C-S4EWM-2023 Testkings & C-S4EWM-2023 Exam Guide Materials

TestkingPass also offers a free C-S4EWM-2023 sample questions on all exams. If you are still confused whether to use our C-S4EWM-2023 exam preparation material, then you can check out and download free demo for C-S4EWM-2023 exam products. Once you have gone through our demo products, you can then decide on purchasing the premium C-S4EWM-2023 testing engine and PDF question answers. You can check out the free demo for C-S4EWM-2023 exam products.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management Sample Questions (Q73-Q78):

NEW QUESTION # 73

What can you do with evaluation points?

- A. Influence which warehouse order is assigned to a resource.
- **B. Influence the search sequence of storage types, storage sections, and bin types.**
- C. Influence which items shall be picked first.
- D. Use them to measure the efficiency of your warehouse.

Answer: B

NEW QUESTION # 74

You want to use Labor Management. For which combination must you activate Labor Management?

- **A. Warehouse number and warehouse process type**
- B. Warehouse number and internal process step
- C. Warehouse number and labor activity
- D. Warehouse number and processor

Answer: A

Explanation:

Labor Management (LM) in SAP S/4HANA Cloud Private Edition, Extended Warehouse Management (EWM) is a functionality designed to plan, manage, and monitor workforce activities within a warehouse. It helps optimize labor resources by tracking activities, calculating planned durations, and measuring performance. To activate and utilize Labor Management effectively, specific configuration settings must be defined in the system. The correct combination for activation involves the warehouse number and the warehouse process type, as these two elements together determine the scope and nature of warehouse processes where labor activities are tracked.

Step-by-Step Explanation:

Understanding Labor Management in SAP EWM

Labor Management is an advanced feature in SAP EWM that enables warehouse managers to plan labor requirements, monitor execution, and evaluate performance. It integrates with warehouse processes to provide insights into resource utilization.

In SAP S/4HANA Cloud Private Edition, EWM Labor Management is embedded and leverages warehouse-specific configurations to function correctly.

Key Configuration Elements for Labor Management

Warehouse Number: This is the highest organizational unit in SAP EWM, representing a physical or logical warehouse. All processes and activities within EWM are tied to a specific warehouse number.

Warehouse Process Type: This defines the type of process executed in the warehouse (e.g., goods receipt, picking, putaway, packing). It categorizes the tasks performed and links them to specific activities that Labor Management can track.

Labor Management requires these two elements to be combined because they collectively identify the scope of operations and the specific processes where labor activities need to be planned and monitored.

Activation of Labor Management

To activate Labor Management, you must enable it at the warehouse level and specify which processes within that warehouse will utilize LM. This is done in the SAP EWM configuration under Labor Management settings.

In the SAP Easy Access menu, navigate to Extended Warehouse Management > Settings > Labor Management > Activate Labor Management. Here, you specify the warehouse number and link it to relevant warehouse process types.

The activation is not tied to labor activity, internal process step, or processor alone, as these are subsequent elements used in execution rather than activation.

Why "Warehouse Number and Warehouse Process Type" is Correct

Warehouse Number: Determines the warehouse where Labor Management will be applied. Without specifying the warehouse, the system cannot scope the labor activities.

Warehouse Process Type: Defines the specific processes (e.g., picking, putaway) within the warehouse that require labor tracking. This ensures that Labor Management is activated only for relevant processes, making it granular and process-specific.

Together, they form the foundational combination for enabling Labor Management, as documented in SAP EWM configuration guides and help documentation.

Evaluation of Other Options

A . Warehouse number and labor activity: Labor activity (e.g., picking, walking) is defined later in the Labor Management process to calculate durations and performance. It is not part of the initial activation combination.

B . Warehouse number and internal process step: Internal process steps (e.g., verification, transport) are detailed sub-steps within a process type and are not directly used to activate Labor Management at a high level.

D . Warehouse number and processor: A processor (worker or resource) is an operational entity executing tasks, not a configuration element for activating Labor Management. Processors are assigned after LM is activated.

SAP S/4HANA Cloud Private Edition, EWM References

SAP Help Portal: The official documentation under "SAP Extended Warehouse Management > Labor Management > Configuration" specifies that Labor Management activation requires settings at the warehouse level and association with process types. Refer to the section on "Activating Labor Management" for detailed steps.

What's New in SAP S/4HANA 2023 FPS03: The introduction of Predictive Labor Demand Planning (LDP) reinforces the linkage between warehouse processes and labor tracking, emphasizing process types as a key element (SAP Community Blog, Feb 27, 2025).

SAP Learning: Courses like "SAP S/4HANA Cloud Private Edition, Extended Warehouse Management" (C_S4EWM_2023) highlight configuration dependencies on warehouse number and process type for LM activation.

Conclusion

The combination of warehouse number and warehouse process type is the verified answer because it aligns with SAP EWM's configuration logic for enabling Labor Management. This combination ensures that labor tracking is scoped to a specific warehouse and its relevant processes, providing a structured foundation for subsequent LM functionalities like task assignment and performance evaluation.

NEW QUESTION # 75

What do you influence with a resource group definition?

- A. The queues a resource should process
- B. The horizontal and vertical speed of a resource
- C. The bin access type limitations of the resource
- D. The operating environment of the resource

Answer: A

Explanation:

Comprehensive and Detailed In-Depth Explanation:

A resource group in SAP EWM links resources to specific tasks. Option B ("The queues a resource should process") is correct because it determines which queues (task lists) the resource handles, configured in SPRO:

SCM Extended Warehouse Management > Resource Management > Define Resource Group. Options A (bin access), C (environment), and D (speed) are controlled by other settings like bin type restrictions or resource type parameters, not the group.

NEW QUESTION # 76

Which of the following are features of the clean core dashboard? Note: There are 2 correct answers to this question.

- A. It can be accessed by using SAP For Me
- B. Customers can use the dashboard in the dev, test, and production tenants
- C. It can be used in all SAP S/4HANA Cloud editions
- D. Customers can grant access to the dashboard to partners

Answer: A,B

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The clean core dashboard in SAP S/4HANA Cloud monitors system health. Option A ("It can be accessed by using SAP For Me") is correct as it's available via the SAP For Me portal, and option B ("Customers can use the dashboard in the dev, test, and production tenants") is correct for multi-environment access. Option C is incorrect as it's specific to certain editions, and option D (partner access) is not a standard feature.

NEW QUESTION # 77

How are warehouse orders sorted for automatic assignment to a resource? Note: There are 2 correct answers to this question.

- A. By mode
- B. By resource utilization
- C. By latest starting date
- D. By execution priority

Answer: C,D

Explanation:

Automatic Assignment of Warehouse Orders to Resources

* Warehouse orders are automatically sorted to optimize resource assignment:

* Latest Starting Date (A): Orders with the latest starting dates are prioritized to ensure timely execution.

* Execution Priority (D): Orders are prioritized based on their assigned priority levels to manage critical tasks effectively.

Excluded Options

* By Resource Utilization (B): Resource utilization is managed through capacity planning, not order sorting.

* By Mode (C): Sorting by mode is not relevant for warehouse order assignment.

SAP S/4HANA Cloud Private Edition Reference

* Refer to Resource Assignment and Sorting in EWM for detailed configurations.

NEW QUESTION # 78

.....

The study material provided to the customers is available in three different formats. The first one is PDF (Portable Document Format). It is commonly used for quick preparation. Customers can access the SAP C-S4EWM-2023 PdfDumps anywhere anytime on their smartphones, tablets, and laptops to prepare for SAP C-S4EWM-2023 certification exam in a short time.
