Our Analytics-Arch-201 training materials are famous for high-quality, and we have a professional team to collect the first hand information for the exam. Analytics-Arch-201 learning materials of us also have high accurate, since we have the professionals check the exam dumps at times. We are strict with the answers and quality, we can ensure you that the Analytics-Arch-201 Learning Materials you get are the latest one we have. Moreover, we offer you free update for one year and the update version for the Analytics-Arch-201 exam dumps will be sent to your email automatically.

Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.

Topic 2	<ul style="list-style-type: none"> • Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.
Topic 3	<ul style="list-style-type: none"> • Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.

Analytics-Arch-201 Exam Engine - Analytics-Arch-201 Latest Dumps Files

Therefore, it is indispensable to choose a trusted website for real Analytics-Arch-201 dumps. Pass4sures is one of the most reliable platforms to get actual Analytics-Arch-201 dumps. It offers the latest and valid real Salesforce Certified Tableau Architect (Analytics-Arch-201) exam dumps. The product of Pass4sures is available in Salesforce Analytics-Arch-201 PDF, desktop Analytics-Arch-201 practice exam software, and web-based Salesforce Certified Tableau Architect practice test.

Salesforce Certified Tableau Architect Sample Questions (Q97-Q102):

NEW QUESTION # 97

A large organization plans to consolidate several Tableau Server instances into a single server. What is the most important consideration to ensure a successful consolidation?

- **A. Thoroughly planning the integration of data sources, user permissions, and content from each server**
- B. Focusing solely on the technical aspects and not on the user impact of consolidation
- C. Immediately decommissioning all other servers before starting the consolidation process
- D. Consolidating all servers simultaneously to minimize the transition period

Answer: A

Explanation:

Thoroughly planning the integration of data sources, user permissions, and content from each server Careful planning of how to integrate data sources, user permissions, and content is crucial to ensure that all elements function cohesively in the new consolidated server, minimizing disruptions to users and business operations. Option A is incorrect because consolidating all servers simultaneously can be overwhelming and may lead to significant issues. Option C is incorrect as neglecting the impact on users can result in access issues and dissatisfaction. Option D is in-correct because decommissioning other servers before consolidation can disrupt ongoing operations and access to data.

NEW QUESTION # 98

When configuring Mutual SSL (Secure Sockets Layer) for Tableau Server, what is an essential requirement to establish a secure connection?

- A. Configuring the Tableau Server to use a specific set of cipher suites
- B. Requiring all users to have administrative privileges on their devices
- C. Enabling port forwarding on the Tableau Server for all SSL traffic
- **D. Installing a trusted certificate on both the client's and server's sides**

Answer: D

Explanation:

Installing a trusted certificate on both the client's and server's sides For Mutual SSL to function correctly, it is essential to install a trusted certificate on both the client and server sides. This ensures that both parties can authenticate each other, establishing a secure and verified connection. Mutual SSL relies on this two-way authentication process for enhanced security. Option A is incorrect because port forwarding is not a standard requirement for Mutual SSL configuration. Option B is incorrect as requiring administrative privileges on user devices is unrelated to Mutual SSL setup. Option D is incorrect because while configuring cipher suites is part of SSL configuration, it is not the primary requirement for Mutual SSL.

NEW QUESTION # 99

How does the Tableau Server Resource Monitoring Tool contribute to the observability of a Tableau Server environment in terms of system resource usage?

- **A. It offers insights into server resource utilization, such as CPU, memory, and disk usage**
- B. It monitors network bandwidth usage between the Tableau Server and client applications
- C. It provides real-time alerts for any changes in user permissions and security settings
- D. It tracks changes in workbook and dashboard designs to assess their impact on performance

Answer: A

Explanation:

It offers insights into server resource utilization, such as CPU, memory, and disk usage The Tableau Server Resource Monitoring Tool is instrumental in providing observability into system resource usage. It offers detailed insights into how the server utilizes resources like CPU, memory, and disk space, allowing administrators to identify potential bottlenecks and optimize server performance accordingly. Option A is incorrect because the Resource Monitoring Tool focuses on system resources, not on monitoring changes in permissions and security settings. Option C is incorrect as the tool is designed to monitor server resource usage, not to track design changes in workbooks and dashboards. Option D is incorrect because it primarily monitors server resource utilization, not network bandwidth usage between the server and clients.

NEW QUESTION # 100

To ensure optimal performance of Tableau Server, what automated maintenance task is essential for managing disk space and server efficiency?

- **A. Setting up a script to regularly clean up old logs and temporary files from the server**
- B. Automating the defragmentation of the server's hard drives on a weekly basis
- C. Configuring automatic updates for Tableau Server software and associated data drivers
- D. Scheduling a complete server reboot to occur outside of business hours every day

Answer: A

Explanation:

Setting up a script to regularly clean up old logs and temporary files from the server Automating the cleanup of old logs and temporary files is crucial for managing disk space and maintaining server efficiency in Tableau Server. Regularly removing these files helps prevent unnecessary disk space usage and can improve server performance. Setting up a script to perform this task ensures that the cleanup occurs consistently and without manual intervention. Option A is incorrect because while defragmentation can be important, it is not as crucial as regular cleanup of logs and temporary files for server performance. Option C is incorrect as automatic updates for software and drivers are important, but they do not directly address the management of disk space and temporary files. Option D is incorrect because a complete server reboot is a drastic measure and may not be necessary for regular maintenance

NEW QUESTION # 101

For a multinational corporation implementing Tableau, what is the most important consideration for licensing and ATR compliance?

- A. Selecting a licensing model based solely on the preferences of the IT department
- B. Ignoring ATR compliance as it is not crucial for multinational operations
- C. Opting for the cheapest available licensing option to minimize costs
- **D. Choosing a licensing model that aligns with the global distribution of users and adheres to ATR requirements**

Answer: D

Explanation:

Choosing a licensing model that aligns with the global distribution of users and adheres to ATR requirements. This choice ensures that the licensing model is suitable for the geo-graphical spread of the users, complying with ATR regulations across different regions, which is crucial for a multinational deployment. Option A is incorrect because the cheapest option may not meet the specific needs and compliance requirements of a multinational corporation. Option B is incorrect as ATR compliance is essential for legal and operational reasons, especially in a multinational context. Option D is incorrect because the licensing model should be based on broader organizational needs and compliance, not just the preferences of the IT department.

NEW QUESTION # 102

.....

Being anxious for the Analytics-Arch-201 exam ahead of you? Have a look of our Analytics-Arch-201 training engine please. Presiding over the line of our practice materials over ten years, our experts are proficient as elites who made our Analytics-Arch-201 learning questions, and it is their job to officiate the routines of offering help for you. All points are predominantly related with the exam ahead of you. You will find the exam is a piece of cake with the help of our Analytics-Arch-201 Study Materials.
