## PDII Dumps PDF & Flexible PDII Learning Mode

If you fail in PDII exam test with Actual4Labs PDII exam dumps, we promise to give you full refund! You only need to scan your PDII test score report to us together with your receipt ID. After our confirmation, we will give you full refund in time. Or you can choose to charge another exam Q&AS instead of PDII Exam Dumps. Useful Salesforce certifications exam dumps are assured with us. If our PDII exam dumps can't help you pass PDII exam, details will be sent before we send the exam to you. We don't waste our customers' time and money! Trusting Actual4Labs is your best choice!

Salesforce PDII Exam is a challenging yet rewarding certification that validates advanced knowledge and skills in Salesforce development. It is a key credential for developers who want to advance their careers in Salesforce and work on complex projects that require advanced skills and knowledge. With the right preparation and dedication, candidates can pass the exam and join the ranks of certified Salesforce experts.

### Salesforce Platform Developer II Sample Questions (Q93-Q98):

#### NEW QUESTION # 93

A developer created a Lightning web component for the Account record page that displays the five most recently contacted Contacts for an Account. The Apex method, `Contacts`, returns a list of Contacts and will be wired to a property in the component.

```
01:
02: public class ContactFetcher {
03:
04:     static List<Contact> getRecentContacts(Id accountId) {
05:         List<Contact> contacts = getFiveMostRecent(accountId);
06:         return contacts;
07:     }
08:
09:     private static List<Contact> getFiveMostRecent(Id accountId) {
10:         //...implementation...
11:     }
12: }
```

Which two lines must change in the above code to make the Apex method able to be wired?

Choose 2 answers

- A. Add `public` to line 04.
- B. Add `@AuraEnabled(cacheable=true)` to line 08.
- C. Remove `private` from line 09.
- D. Add `@AuraEnabled(cacheable=true)` to line 03.

**Answer: B,C**

Explanation:

To make an Apex method callable from a Lightning Web Component, you need to annotate the method with `@AuraEnabled` and mark it as cacheable if it's only retrieving data without modifying it. Additionally, the method must be public to be accessible from the component.

\* Line 04: Needs `@AuraEnabled(cacheable=true)` to allow the method to be called from the Lightning Web Component and indicate that the method doesn't modify any data, making it suitable for caching.

\* Line 09: The method `getFiveMostRecent` should not be private because private methods cannot be called from a Lightning Web Component. Changing it to public (or default, which is equivalent to public within the same namespace) is required.

#### NEW QUESTION # 94

Which of the following annotations is the right way to invoke a single apex method

- A. @InvocableApex()
- **B. @InvocableMethod()**
- C. @InvocableAction()

**Answer: B**

#### NEW QUESTION # 95

What is the transaction limit for the number of DML statements allowed?

- A. 0
- B. 2,000
- C. 200 (synchronous), 100 (async)
- D. 100 (synchronous), 200 (async)
- **E. 1**

**Answer: E**

Explanation:

Includes Approval functions, rollbacks/savepoints, and System.runAs

#### NEW QUESTION # 96

Which method should be used to convert a Date to a String in the current user's locale?

- A. String.format
- B. Date.parse
- **C. Date.format**
- D. String.valueOf

**Answer: C**

Explanation:

Handling date and time formatting across different countries is a common requirement in global Salesforce orgs. For example, a user in the US expects MM/DD/YYYY, while a user in the UK expects DD/MM/YYYY.

The Date.format() method (Option D) is specifically designed to handle this localization automatically.

When called on a Date instance, it converts the value into a String based on the locale settings of the logged-in user. This is the most efficient and localized approach as it requires no manual mapping of date patterns.

Option A (Date.parse) is the inverse; it converts a localized String into a Date object. Option C (String.valueOf) returns a standard, non-localized format (YYYY-MM-DD), which is used for system logging or API payloads but is often confusing for end-users. Option B (String.format) is used for variable substitution within a string (e.g., "Hello PDII") and does not inherently handle date localization. By using the native .format() method, developers ensure a consistent and familiar user experience for employees worldwide.

#### NEW QUESTION # 97

After a Platform Event is defined in a Salesforce org, events can be published via which two mechanisms?

Choose 2 answers

- **A. External Apps can use the standard Streaming API.**
- B. internal Apps can use Outbound Messages
- **C. Internal Apps can use Process Builder.**
- D. External Apps require a custom Apex web service.

**Answer: A,C**

Explanation:

Explanation

internal apps can use processes, flows, or Apex to publish platform event messages from a Salesforce app.

Process Builder is a tool that lets you automate business processes by creating processes. You can use Process Builder to publish platform event messages when a record changes or when a platform event occurs.

external apps can use Salesforce APIs to publish platform event messages. You can use any Salesforce API to create platform events, such as SOAP API, REST API, or Bulk API. The Streaming API is a Salesforce API that lets you push a stream of notifications from Salesforce to external apps. You can use the Streaming API to publish platform event messages by creating records of your event type.

Therefore, using Process Builder and Streaming API are two mechanisms to publish platform event messages after a platform event is defined in a Salesforce org.
