- A. Defines where to load the data
- B. Defines how ETL extracts and transforms data
- C. Defines which process models are connected to the data
- D. Defines which process KPIs are related to which data table

答案: A,B

解題說明:

The data model in the ETL Data Pipeline configuration of SAP Signavio Process Intelligence defines the structure and processing rules for data used in process mining. The SAP Signavio ETL Guide clarifies:

* Option C (Defines how ETL extracts and transforms data): The data model specifies the schema for the event log and case attributes, guiding the extraction and transformation processes to ensure data is formatted correctly for analysis.

* Option D (Defines where to load the data): The data model determines the target tables or structures in Process Intelligence where transformed data is loaded, ensuring it is accessible for analysis.

* Option A (Defines which process KPIs are related to which data table) is incorrect because KPIs are defined in metrics or widgets, not directly in the data model, though the model supports the data used for KPIs.

- B. Add relevant attributes directly through the comment function.
- C. Edit and publish processes immediately.
- D. Include all employees in process performances and reviews.

答案: A,D

解題說明:

The comment function within the SAP Signavio Process Collaboration Hub offers several benefits, primarily aimed at enhancing collaboration and optimization. Firstly, it allows for the inclusion of all employees in process performance reviews and discussions, thereby fostering a culture of continuous improvement and engagement across the organization. Secondly, optimization processes can be significantly accelerated as feedback and suggestions are gathered and acted upon swiftly. This function does not, however, directly enable users to edit and publish processes (which is more aligned with the administrative rights within the tool) or to add relevant attributes directly through the comment function, as attributes are typically managed within the process modeling environment.
