Die Zertifizierungsantworten zur Saviynt SAVIGA-C01 Zertifizierungsprüfung von ZertPruefung werden von IT-Eliten seit mehr als 10 Jahre durch ihre Forschung und Praxis gesammelt. ZertPruefung hat viele neueste und genaueste Prüfungsunterlagen. ZertPruefung ist für Ihren Erfolg vorhanden. Es bedeutet, dass Sie Erfolg wählen, wenn Sie ZertPruefung wählen. Wenn Sie Saviynt SAVIGA-C01 Zertifizierungsprüfungen leicht bestehen wollen, ist ZertPruefung die einzige Wahl für Sie.

Saviynt SAVIGA-C01 Prüfungsplan:

Thema	Einzelheiten
Thema 1	Saviynt IGA Implementation: This section focuses on the implementation aspects of Saviynt IGA solutions. It covers deployment strategies, integration with existing systems, and customization techniques.

Thema 2	Rules & Policies: This section measures the skills of Saviynt Administrators in creating and managing rules and policies within the Saviynt IGA platform. It covers access policies, provisioning rules, and compliance policies.
Thema 3	Analytics: Saviynt IGA Administrators are expected to demonstrate knowledge of analytics capabilities in the Saviynt IGA platform. This section covers reporting, dashboards, and data analysis techniques.
Thema 4	Identity Warehouse: Saviynt IGA Professionals are expected to showcase their understanding of the Identity Warehouse concept in this section. It covers data modeling, identity reconciliation, and data synchronization.
Thema 5	Access Reviews: This section focuses on the access review and certification processes in Saviynt IGA. It covers campaign management, reviewer workflows, and remediation procedures. Saviynt IGA Administrators should be able to set up and manage effective access review campaigns.
Thema 6	ARS: This section of the exam measures the skills of Saviynt IGA Administrators and covers the Access Request System (ARS) in Saviynt. It includes understanding the ARS workflow, configuring access requests, and managing approvals. Candidates should be able to set up and customize the ARS for different organizational needs. The exam assesses the ability to implement effective access request processes.
Thema 7	Implement IGA Solutions: This section focuses on the practical implementation of IGA solutions using Saviynt. It covers project planning, requirements gathering, and solution design. Saviynt IGA Administrators should be able to translate business needs into technical solutions.
Thema 8	Architecture: Saviynt IGA Administrators are expected to understand the overall architecture of the Saviynt IGA platform in this section. It covers system components, integration points, and deployment models.
Thema 9	Deploy & Manage: This section measures the skills of exam-takers in deploying and managing Saviynt IGA solutions. It covers installation procedures, upgrades, and ongoing maintenance tasks.

SAVIGA-C01 Prüfungs & SAVIGA-C01 Musterprüfungsfragen

Die Schulungsunterlagen zur Saviynt SAVIGA-C01 Zertifizierungsprüfung von ZertPruefung werden die größte Erfolgsquote erzielen. Neben den Büchern sind heutzutage das Internet als ein Wissensschatz angesehen. In ZertPruefung können Sie Ihren Wissensschatz finden. Das ist eine Website, die Ihnen sehr helfen können. Sie werden sicher komplizierte Übungen treffen, Unser ZertPruefung wird Ihnen helfen, die Prüfung ganz einfach zu bestehen, weil es alle erforderlichen Kenntnisse zur Saviynt SAVIGA-C01 Zertifizierungsprüfung enthält.

Saviynt IGA Certified Professional Exam (L100) SAVIGA-C01 Prüfungsfragen mit Lösungen (Q27-Q32):

27. Frage

There is a requirement to have multiple users as Campaign Owners for a User Manager Campaign. Which of the following configurations would be appropriate to achieve this?

- A. Create an Organization Query and add users
- **B. Create a user group and choose the user group as the Campaign Owner**
- C. Create a Roles Query and add Roles of various users
- D. Create a user Query and add users

Antwort: B

Begründung:

To have multiple users as Campaign Owners for a User Manager Campaign in Saviynt, the appropriate configuration is to B. Create

a user group and choose the user group as the Campaign Owner. Here's the explanation:

* Saviynt's User Groups: User groups are collections of users that can be used for various purposes, including assigning roles, permissions, and ownership.

* Campaign Owner as a User Group: Saviynt allows you to specify a user group as the owner of a campaign. This means that all members of the group will have the same campaign ownership permissions.

* Benefits of Using a User Group:

* Simplified Management: It's easier to manage a group of users than to assign individual users as campaign owners.

* Flexibility: You can easily add or remove users from the group to adjust campaign ownership as needed.

* Shared Responsibility: All members of the group share responsibility for managing the campaign.

* Why Other Options Are Less Suitable:

* A. Create a user Query and add users: While you can use queries to select users, directly using a user group is a more standard and manageable approach for assigning multiple campaign owners.

* C. Create a Roles Query and add Roles of various users: Roles are typically used for granting access rights, not for defining campaign ownership.

* D. Create an Organization Query and add users: Organization queries are related to the organizational structure and are not the best way to define a group of campaign owners.

In conclusion: Using a user group as the Campaign Owner in Saviynt provides a flexible and manageable way to assign multiple users as owners, simplifying administration and promoting shared responsibility for campaign management.

28. Frage

What is the maximum file attachment limit for a request?

- A. 0
- B. 1
- C. 2
- D. 3

Antwort: A

Begründung:

The maximum file attachment limit for a request in Saviynt is typically 10. Here's an explanation:

Saviynt's Access Request System (ARS): The ARS allows users to attach files to access requests to provide supporting documentation or justification.

Attachment Limits: To prevent excessive storage usage and potential performance issues, Saviynt imposes limits on the number and size of attachments allowed per request.

Default Limit: The default maximum number of attachments allowed per request in Saviynt is generally 10.

Configuration: While 10 is the common default, it's worth noting that this limit might be configurable within the ARS settings in some Saviynt deployments. However, significantly increasing this limit could impact performance.

File Size Limit: In addition to the number of attachments, there's also usually a limit on the individual file size and the total size of all attachments combined. This is also generally configurable. These file size limits are important for maintain system stability and performance.

Error Handling: If a user attempts to exceed the attachment limit, Saviynt will typically display an error message, preventing them from submitting the request until the number of attachments is reduced.

29. Frage

How can a single report be configured to display the account attributes of all the accounts to Application Owners?

- A. Use Elasticsearch Query
- B. V2 Analytics using SQL Query with External Connection
- C. V2 Analytics using SQL Query with Allowed Action
- D. V2 Analytics using SQL Query with User Context

Antwort: D

Begründung:

To configure a single report that displays the account attributes of all the accounts to their respective Application Owners in Saviynt, the best approach is D. V2 Analytics using SQL Query with User Context.

Here's a breakdown:

* Saviynt's Analytics V2: This is Saviynt's newer analytics platform, offering more advanced features and flexibility compared to the

older version.

* SQL Query with User Context: This is the key to achieving the desired outcome. "User Context" means that the query will be executed in the context of the currently logged-in user (in this case, the Application Owner).

* How it Works:

* Dynamic Filtering: When an Application Owner runs the report, the "User Context" will automatically filter the data to show only the accounts that they own.

* Security and Data Privacy: This ensures that each Application Owner only sees the data that they are authorized to access.

* SQL Query Structure: The SQL query would likely involve a JOIN between the accounts table and a table that defines application ownership (e.g., applications), using a WHERE clause that filters based on the current user's ID or username. Something like this (syntax might need adjustment for Saviynt's specific SQL dialect):

```
SELECT a.*
```

```
FROM accounts a
```

```
JOIN applications app ON a.application_id = app.application_id
```

```
WHERE app.owner_id = ${CURRENT_USER_ID} -- This is the user context part
```

* Why Other Options Are Less Suitable:

* A. Use Elasticsearch Query: While Elasticsearch can be used for analytics, it might not be the best tool for this specific requirement, as it doesn't inherently support the concept of "User Context" in the same way as SQL queries in Analytics V2.

* B. V2 Analytics using SQL Query with External Connection: External connections are used to query data from external databases, which is not necessary in this scenario.

* C. V2 Analytics using SQL Query with Allowed Action: Allowed Actions are used to define actions that can be performed on analytics results, not for filtering data based on user context.

30. Frage

Which of the following options can a Campaign Owner use to view the Entitlements Query that was used in a previously launched Campaign?

- A. Campaign Export
- B. Reconfigure option
- C. Export option at the top right corner of the page, next to the Refresh Progress option
- **D. Campaign Summary**

Antwort: D

Begründung:

To view the Entitlements Query used in a previously launched Campaign in Saviynt, a Campaign Owner can use the C. Campaign Summary. Here's why:

* Saviynt's Campaign Summary: The Campaign Summary provides a detailed overview of a campaign's configuration, including:

* Campaign Scope: The users, applications, or entitlements included in the campaign.

* Filters and Queries: Any filters or queries used to define the campaign scope, including the Entitlements Query.

* Certifier Information: Details about the assigned certifiers.

* Schedule: The campaign's start and end dates.

* Status: The current status of the campaign (e.g., Active, Completed, Expired).

* Accessing the Entitlements Query: The Campaign Summary typically includes a section that displays the exact query used to select the entitlements included in the campaign.

* Why Other Options Are Less Suitable:

* A. Reconfigure option: While you might be able to see the query by going into the reconfiguration, it's not the most direct way. The Campaign Summary is designed to provide this information readily.

* B. Campaign Export: Exporting the campaign data might include the list of entitlements but not necessarily the original query used to select them.

* D. Export option at the top right corner of the page, next to the Refresh Progress option:

This option typically exports the current view of the campaign data, not the underlying configuration details like the Entitlements Query.

In conclusion: The Campaign Summary in Saviynt is the most direct and convenient place for a Campaign Owner to review the detailed configuration of a campaign, including the Entitlements Query used to define the campaign's scope.

31. Frage

Which of the following objects is available in the User Update Rule to configure Rule conditions?

- A. Accounts
- B. Roles
- **C. Users**
- D. Entitlements

Antwort: C

Begründung:

The object that is available in the User Update Rule to configure Rule conditions in Saviynt is A. Users.

Here's an explanation:

- * User Update Rule Purpose: As mentioned before, User Update Rules are used to automatically update user attributes based on certain conditions.
 - * Condition Based on User Attributes: The conditions for triggering a User Update Rule are primarily based on attributes of the User object itself.
 - * Examples of User Attributes: These attributes can include:
 - * User Status: (e.g., Active, Inactive, Disabled)
 - * Department:
 - * Location:
 - * Job Title:
 - * Manager:
 - * Custom Attributes: Any custom attributes defined for users in your Saviynt environment.
 - * Triggering the Rule: When a user's attributes change, and those changes match the conditions defined in a User Update Rule, the rule is triggered.
 - * Other Options:
 - * B. Accounts: While account attributes can be updated as an action of a User Update Rule, the conditions for triggering the rule are typically based on user attributes, not account attributes.
 - * C. Roles: Similar to accounts, roles can be assigned or removed as an action of a User Update Rule, but the triggering conditions are usually based on user attributes.
 - * D. Entitlements: Entitlements are also typically managed as an action of a User Update Rule, not as part of the triggering condition.
- In conclusion: The User object and its attributes are the primary focus for defining conditions within a Saviynt User Update Rule. Changes to user attributes trigger the rule, which can then perform actions such as updating other user attributes, accounts, roles, or entitlements.

32. Frage

.....

Das Ziel der Saviynt SAVIGA-C01 Prüfungssoftware ist: Bei Ihrer Vorbereitung der Saviynt SAVIGA-C01 Prüfung Ihnen die effektivste Hilfe zu bieten, um Ihre Geld nicht zu verschwenden und Ihre Zeit zu sparen. Unsere Software hat schon zahllose Prüfungsteilnehmer geholfen, Saviynt SAVIGA-C01 Prüfung zu bestehen. Wenngleich die Bestehensquote sehr hoch ist, versprechen wir, dass wir alle Ihrer Gebühren für die Saviynt SAVIGA-C01 Software erstatten wollen, falls Sie die Prüfung nicht bestehen. Wir tun so, um Sie beim Kauf unbesorgt zu machen.
