## **HOT Reliable ACD201 Test Duration - Latest Appian ACD201 Exam Quizzes: Appian Senior Developer**

Our ACD201 exam questions are compiled by experts and approved by the professionals with years of experiences. They are revised and updated according to the change of the syllabus and the latest development situation in the theory and practice. The

language is easy to be understood which makes any learners have no obstacles and our ACD201 Guide Torrent is suitable for anyone. The content is easy to be mastered and has simplified the important information. Our ACD201 test torrents convey more important information with less questions and answers and thus make the learning relaxing and efficient.

## Appian Senior Developer Sample Questions (Q41-Q46):

### NEW QUESTION # 41

You're in the process of deploying a package to the client's TEST environment at the end of a sprint. This package is only relating to changes to a single application.

Which two statements best describes the practices you should follow for automated testing for expression rules either before or after deploying the package? (Choose two.)

- A. After deploying the package, you should perform regression testing by running the Start Rule Tests (All) smart service to automatically run the test cases. This indicates whether there are any impacts caused by the changes across multiple applications.
- B. During Compare and Deploy, the Inspect Deployment tab automatically runs the test cases in each of the expression rules. Review these findings, and either adjust the expression rule or delete outdated test cases.
- C. After deploying the package, you should perform regression testing by running the Start Rule Tests (Applications) smart service to automatically run the test cases. This indicates whether there are any impacts caused by changes to the application.
- D. Before using Compare and Deploy, individually evaluate the test cases in the expression rules you intend to deploy. For any failed test case, adjust the expression rule so that it passes.

**Answer: C,D**

Explanation:

Individually evaluating and fixing expression rule test cases before deployment ensures the new package does not introduce errors. Running regression tests after deployment using the Start Rule Tests (Applications) smart service validates that the deployed changes did not negatively impact the application.

### NEW QUESTION # 42

You need to update an existing Appian application.

The application needs to be responsive and compatible with a variety of screen widths. For example: phone /tablet browser, Appian mobile app, desktop monitor.

Which two functions/parameters should you consider when updating the interfaces? (Choose two.)

- A. `a!isPageWidth()`
- B. `stackWhen` in Columns Layout and Side By Side Layout
- C. `a!isNativeMobile()`
- D. Width of a page in the site object

**Answer: B,C**

Explanation:

The `stackWhen` parameter in layout components helps interfaces adapt to different screen sizes by controlling when columns or side-by-side layouts stack vertically.

The `a!isNativeMobile()` function detects if the interface is being viewed on a native mobile app, allowing you to tailor the interface for mobile responsiveness.

### NEW QUESTION # 43

You're the administrator of your insurance company's case management system. You need to limit insurance agents to only those clients to which they have been assigned.

Which two statements must be true for one way to configure Record-Level security for the Customer record? (Choose two.)

- A. A new record-level security rule should be created using the Users found in fields option to specify that if a user is found in the "assignedAgent" field (which is a type User), then they can see their cases.
- B. Data sync should be enabled.
- C. Record-level security means agents must have permission to view the record type and permission to edit the records.
- D. A condition should be added to the record-level security rule to specify which cases specifically named agents can access.

**Answer: A,D**

Explanation:

Creating a record-level security rule using the "Users found in fields" option ensures agents only see records assigned to them through the "assignedAgent" field.

Adding a condition to the rule further refines which records (cases) each agent can access, implementing precise record-level security.

#### NEW QUESTION # 44

You need to write an expression to retrieve a list of all account managers who don't currently have an active customer account. Which code snippet should you use?

- A.
- B.
- C.

**Answer: A**

Explanation:

Chosen snippet uses the difference() function to efficiently get all account managers who are not currently managers of any customer account. It directly compares local!accountManagers to local!customers.manager, resulting in a concise and optimal solution for retrieving account managers without an active customer account.

#### NEW QUESTION # 45

You're developing a record view for a case management system that enables users to upload files to a specific location within an external records application.

Your requirements are:

In this record view, there should be a record action that allows the user to upload a file to the interface and configure the metadata (name, author, file size) before submitting.

If the file is larger than 250MB, the user will be notified that the file will be uploaded overnight.

Once the file has been successfully uploaded, the file will appear on the record view and the user can interact with the file.

Which two pieces of user-facing information must be captured from this business process so that you can develop this record view? (Choose two.)

- A. The email of the system administrator so that an email can be sent to them if the integration fails.
- B. The time of file upload if the file is less than 250MB.
- C. The location of where the file will be uploaded to in the external records application.
- D. How the user wishes to interact with these files in the record view - as a grid or a series of card layouts.

**Answer: C,D**

Explanation:

You need to know the target location in the external records application to properly upload the file.

Understanding how users want to interact with files (grid or card layout) is essential for designing the record view interface.

#### NEW QUESTION # 46

.....

High quality practice materials like our Appian ACD201 learning dumps exert influential effects which are obvious and everlasting during your preparation. The high quality product like our Appian Senior Developer ACD201 Real Exam has no need to advertise everywhere, the exam candidates are the best living and breathing ads.
