NSE8_812 Valid Exam Bootcamp - Reliable Study NSE8_812 Questions

Our NSE8_812 study questions will update frequently to guarantee that you can get enough test banks and follow the trend in the theory and the practice. That is to say, our NSE8_812 training materials boost many advantages and to gain a better understanding of our NSE8_812 Guide Torrent. It is very worthy for you to buy our NSE8_812 practice guide and please trust us. If you still can't fully believe us, please read the introduction of the features and the functions of our NSE8_812 learning questions.

Fortinet NSE 8 - Written Exam (NSE8_812) Sample Questions (Q58-Q63):

NEW QUESTION # 58

Which two methods are supported for importing user defined Lookup Table Data into the FortiSIEM? (Choose two.)

- A. API
- B. FTP
- C. SCP
- D. Report

Answer: A,B

Explanation:

User defined Lookup Table Data (LTD) is a feature that allows users to import custom data into FortiSIEM for correlation, reporting, and analysis purposes. Users can create LTD files in CSV format and import them into FortiSIEM using two methods: FTP or API. FTP is a file transfer protocol that allows users to upload LTD files to a designated folder on the FortiSIEM server. API is an application programming interface that allows users to send HTTP requests to upload LTD files to FortiSIEM using

RESTful web services. Reference: <https://docs.fortinet.com/document/fortisiem/6.4.0/administration-guide/19662/user-defined-lookup-table-data>

NEW QUESTION # 59

Which two statements are correct on a FortiGate using the FortiGuard Outbreak Protection Service (VOS)? (Choose two.)

- A. The antivirus database queries FortiGuard with the hash of a scanned file
- B. The AV engine scan must be enabled to use the FortiGuard VOS feature
- C. The FortiGuard VOS can be used only with proxy-base policy inspections.
- D. The hash signatures are obtained from the FortiGuard Global Threat Intelligence database.
- E. If third-party AV database returns a match the scanned file is deemed to be malicious.

Answer: A,D

Explanation:

The FortiGuard Outbreak Prevention Service (VOS) is a feature that enhances the antivirus scanning capabilities of FortiGate by querying FortiGuard with the hash of a scanned file that is not found in the local antivirus database. If the hash matches a signature in the FortiGuard Global Threat Intelligence database, which contains information about known malware and zero-day threats, the file is deemed to be malicious and blocked by FortiGate. The VOS feature can be used with both proxy-based and flow-based policy inspections, and does not require the AV engine scan to be enabled. Reference:

<https://docs.fortinet.com/document/fortigate/6.2.14/cookbook/968606/outbreak-prevention-service>

NEW QUESTION # 60

Refer to the exhibits.

Exhibit A

Exhibit B

Exhibit C

A customer is trying to set up a VPN with a FortiGate, but they do not have a backup of the configuration. Output during a troubleshooting session is shown in the exhibits A and B and a baseline VPN configuration is shown in Exhibit C Referring to the exhibits, which configuration will restore VPN connectivity?

- A. ☐
- B. ☒
- C. ☐
- D. ☐

Answer: B

Explanation:

The output in Exhibit A shows that the VPN tunnel is not established because the peer IP address is incorrect. The output in Exhibit B shows that the peer IP address is 192.168.1.100, but the baseline VPN configuration in Exhibit C shows that the peer IP address should be 192.168.1.101.

To restore VPN connectivity, you need to change the peer IP address in the VPN tunnel configuration to 192.168.1.101. The correct configuration is shown below:

```
config vpn ipsec phase1-interface
```

```
edit "wan"
```

```
set peer-ip 192.168.1.101
```

```
set peer-id 192.168.1.101
```

```
set dhgrp 1
```

```
set auth-mode psk
```

```
set psk SECRET_PSK
```

```
next
```

```
end
```

Option A is incorrect because it does not change the peer IP address. Option B is incorrect because it changes the peer IP address to 192.168.1.100, which is the incorrect IP address. Option D is incorrect because it does not include the necessary configuration for the VPN tunnel.

NEW QUESTION # 61

A retail customer with a FortiADC HA cluster load balancing five web servers in L7 Full NAT mode is receiving reports of users not able to access their website during a sale event. But for clients that were able to connect, the website works fine. CPU usage on the FortiADC and the web servers is low, application and database servers are still able to handle more traffic, and the bandwidth utilization is under 30%.

Which two options can resolve this situation? (Choose two.)

- A. Add a connection-pool to the FortiADC virtual server
- B. Disable SSL between the FortiADC and the web servers
- C. Add more web servers to the real server pool
- D. Change the persistence rule to LB_PERSISTENCE_SSL_SESSION.

Answer: A,D

NEW QUESTION # 62

Refer to the exhibit.

A customer needs to create a multi-tier MLAG set up with the topology as shown in the exhibit.

A1/A2

B1/B2

C1/C2

Which command snippet should be applied to it, to allow active/active links in this topology?

- A. ☐
- B. ☐
- C. ☐
- D. ☐

Answer: D

NEW QUESTION # 63

.....

Our exam prep material is famous among NSE8_812 exam candidates which help to polish the knowledge required to pass the Fortinet NSE8_812 exam. The certification is organized by NSE8_812 internationally. Our Fortinet NSE8_812 exam questions are the most cost-effective as we understand that you need low-cost material but are authentic and updated.
