

CTFL-AcT Valid Test Papers | Practice CTFL-AcT Test

P.S. Free 2026 ISQI CTFL-AcT dumps are available on Google Drive shared by Lead1Pass: https://drive.google.com/open?id=1hr5BhgebOGYn_KcOx-drKQ0jZNTNsi-1

The countless candidates have already passed their CTFL-AcT certification exam and they all used the real, valid, and updated Lead1Pass CTFL-AcT exam questions. So, why not, take a decision right now and ace your CTFL-AcT Exam Preparation with top-notch CTFL-AcT exam questions?

ISQI CTFL-AcT (ISTQB Foundation Level - Acceptance Testing) exam is an excellent opportunity for individuals to enhance their knowledge and skills in acceptance testing and earn a valuable certification that can help them advance their careers in the software testing industry.

The CTFL-AcT exam is ideal for individuals who are working or are looking to work in software development, quality assurance, or testing. ISTQB Foundation Level - Acceptance Testing certification is recognized globally and validates one's knowledge and skills in the area of acceptance testing. Those who take the CTFL-AcT Exam can expect to gain a better understanding of the benefits of acceptance testing and how to create test cases that focus on a customer's requirements. Additionally, the certification demonstrates an individual's willingness to continue learning about new testing techniques and how to incorporate them into their job functions.

Correct CTFL-AcT Valid Test Papers & Leader in Qualification Exams & Trustable CTFL-AcT: ISTQB Foundation Level - Acceptance Testing

The pass rate is 98% for CTFL-AcT exam bootcamp, if you choose us, we can ensure you that you can pass the exam just one time. In addition, we offer you free demo to have a try before buying, so that you can know what the complete version is like. In order to strengthen your confidence for CTFL-AcT training materials, we are pass guarantee and money back guarantee, and we will refund your money if you fail to pass the exam. We have a professional service team and they have the professional knowledge for CTFL-AcT Exam Bootcamp, if you have any questions, you can contact with them.

ISQI CTFL-AcT Exam is designed for professionals who are involved in software testing, such as testers, developers, quality assurance specialists, and project managers. It is also beneficial for anyone who wants to enhance their knowledge and skills in acceptance testing. By gaining this certification, candidates can demonstrate their expertise in acceptance testing, which can lead to career advancement opportunities and increased credibility in the industry.

ISQI ISTQB Foundation Level - Acceptance Testing Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which of the following statements regarding defects is MOST correct?

- A. If the defect turns out to be a bug, the tester writes a defect report and sends it to the business analyst for further investigation.

- B. Regular meetings between business analysts and testers are necessary to report discrepancies between actual and expected outcome.
- C. The tester should analyze the potential impact of a defect on system usage, before communicating it to the business analyst.
- D. Testers should provide accurate information regarding the difference between the expected test result and the actual result.

Answer: D

NEW QUESTION # 48

Which one of the following scenarios characterizes UX task analysis BEST?

- A. External conditions are considered as input for subsequent design steps.
- B. Use cases are analyzed and represented through business process models.
- C. Users are qualified depending on their physical and intellectual characteristics.
- D. Inspirations from similar sectors are sought to identify successful solutions.

Answer: A

Explanation:

UX task analysis focuses on understanding how users perform their tasks in real-world contexts. It captures not only the sequence of actions but also the surrounding environment - including physical conditions (light, noise), devices used, interruptions, and constraints. These external or environmental conditions become vital inputs to UX design decisions, helping teams adapt interfaces and workflows to user realities.

Option C is correct because it emphasizes this key aspect of UX task analysis: capturing external conditions that influence usability and system interaction.

Other options:

A focuses on user profiling, not task analysis.

B refers to business process modeling, which is more strategic and less user-context specific.

D refers to benchmarking or inspiration analysis - useful for design ideation but not task analysis.

C). External conditions are considered as input for subsequent design steps.

NEW QUESTION # 49

For a project to migrate an employee qualification management system to web technologies, the following requirement has been defined REQ 3-12 The system must be able to manage 3 types of users: HR team member with full rights, department manager with consultation and update rights only for members of his/her department, and employee with read-only access to his/her data Which of the following sentences BEST reflects an acceptable acceptance criterion?

- A. The list of employees who are members of a department can only be updated by a person logged as HR
- B. The database must use MongoDB
- C. Security test must be performed to demonstrate that the authentication and rights management system is working properly
- D. Since I am logged in as a department manager, when I try to access the file of an employee who is not in my department then a message telling me that I do not have access rights is displayed

Answer: D

Explanation:

Acceptance criteria should define how the system behaves for a given user story or requirement. They must be precise, testable, and directly traceable to the requirement being verified.

REQ 3-12 describes access control for three user types. Option B is a concrete, scenario-based acceptance criterion that tests the enforcement of access rights - making it an ideal match.

Other options:

A is irrelevant - database technology (MongoDB) is an implementation detail, not a functional criterion.

C is too vague - stating that security tests must be performed doesn't specify expected behavior or outcome.

D is plausible, but option B more directly demonstrates how an actual system behavior validates the requirement.

B). Since I am logged in as a department manager, when I try to access the file of an employee who is not in my department then a message telling me that I do not have access rights is displayed

NEW QUESTION # 50

Which one of the following statements describes correctly how acceptance testing may be augmented with other test techniques or approaches?

- A. In a model-based testing approach, acceptance tests are generated from graphical or textual models.
- B. In a black-box testing approach, acceptance test scenarios follow the implemented sequence of function calls in the code.
- C. In a risk-based testing approach, acceptance criteria are derived from the tester's experience and intuition.
- D. In a priority-based testing approach, prioritization of acceptance tests depends on identified product risks.

Answer: A

Explanation:

Model-Based Testing (MBT) is a test design technique in which test cases are derived from a model that describes some aspects of the system's behavior. In the context of acceptance testing, MBT can be used to generate high-level acceptance test cases automatically from business process models, use case diagrams, state models, or decision tables.

Option A is correct because MBT supports the systematic generation of acceptance test cases from these models, enabling better coverage of business rules and workflows while maintaining traceability to the requirements.

Other options:

B is close but slightly off: prioritization of acceptance tests in a priority-based approach depends on business value or stakeholder-defined priorities, not strictly on product risks.

C is incorrect. Risk-based testing relies on structured risk assessment, not just intuition or experience.

D is false. Black-box testing focuses on inputs and outputs without referencing the internal structure (such as function calls), which is characteristic of white-box testing.

Exact Reference - ISTQB CTFL Acceptance Testing Syllabus (Section 2.3):

"Model-based testing can be used to generate acceptance test cases systematically based on models representing business processes or system behavior."

NEW QUESTION # 51

Which one of the following statements regarding acceptance criteria is true?

- A. Testers should not be involved in writing acceptance criteria to make sure that the test is independent.
- B. Acceptance criteria are specific to agile frameworks where they correspond to functional requirements.
- C. Acceptance criteria specify what shall be tested to verify that a requirement or user story has been implemented correctly.
- D. In acceptance test-driven development (ATDD), acceptance criteria replace acceptance tests.

Answer: C
