The only aim of our company is to help each customer pass their exam as well as getting the important certification in a short time. If you want to pass your exam and get the CCAAK certification which is crucial for you successfully, I highly recommend that you should choose the CCAAK certification preparation materials from our company so that you can get a good understanding of the exam that you are going to prepare for. We believe that if you decide to buy the CCAAK Exam Materials from our company, you will pass your exam and get the certification in a more relaxed way than other people.

Every year, countless Confluent aspirants face challenges to prove their skills and knowledge by attempting the Confluent CCAAK certification exam. Once they pass this examination, lucrative job opportunities in the tech industry await them. But fear not! Prep4sureGuide has got you covered with their collection of real and updated CCAAK Exam Questions. These affordable CCAAK questions are available in three user-friendly formats, ensuring a smooth and efficient preparation experience for the CCAAK exam.

CCAAK Latest Braindumps Files | New CCAAK Dumps

Although at this moment, the pass rate of our Confluent CCAAK exam braindumps can be said to be the best compared with that of other exam tests, our experts all are never satisfied with the current results because they know the truth that only through steady progress can our Confluent Certified Administrator for Apache Kafka CCAAK Preparation materials win a place in the field of exam question making forever.

Confluent CCAAK Exam Syllabus Topics:

Topic	Details

Topic 1	• Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.
Topic 2	• Deployment Architecture: This section of the exam measures skills of a Kafka Administrator and covers different Kafka deployment topologies. It evaluates understanding of high availability, disaster recovery, multi-data center replication, and the roles of Zookeeper or KRaft in the cluster architecture.
Topic 3	• Apache Kafka® Cluster Configuration: This section of the exam measures skills of a Kafka Administrator and includes configuring broker properties, tuning for performance, managing topic-level settings, and applying best practices for production-grade environments.
Topic 4	• Troubleshooting: This section of the exam measures skills of a Kafka Administrator and includes diagnosing common issues in Kafka clusters. It covers problem areas such as performance bottlenecks, message delivery failures, replication issues, and consumer lag, along with techniques to resolve them effectively.
Topic 5	• Observability: This section of the exam measures skills of a Site Reliability Engineer and focuses on monitoring Kafka clusters. It assesses knowledge of metrics, logging, and alerting tools, including how to use them to maintain cluster health and performance visibility.
Topic 6	• Apache Kafka® Fundamentals: This section of the exam measures skills of a Kafka Administrator and covers core concepts such as Kafka architecture, components, and data flow. It assesses the candidate's understanding of topics like topics and partitions, brokers, producers, consumers, and message retention.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q42-Q47):

NEW QUESTION # 42
A company has an existing Kafka cluster running without SSL/TLS enabled. The customer wants to enable SSL on brokers to secure data in transit, but they would like to give applications connecting to this cluster some time to migrate to using SSL connection instead of putting a hard stop.
Which solution will meet the customer's requirements?

- A. Create a new listener with SSL enabled.
- B. Enable SSL on the current listener, and do not implement SSL on application side.
- C. Enable SSL on the current Listener, and do not enable mTLS.
- D. Modify the advertised listeners setting on brokers to use SSL.

Answer: A

Explanation:
Kafka supports multiple listeners, allowing you to run PLAINTEXT and SSL simultaneously. By creating a new SSL-enabled listener (e.g., on a different port), existing applications can continue using PLAINTEXT while gradually migrating to the SSL listener. This approach avoids downtime and gives clients time to adapt without enforcing a hard cutover.

NEW QUESTION # 43
Which model does Kafka use for consumers?

- A. Pull
- B. Publish
- C. Push
- D. Enrollment

Answer: A

Explanation:
Kafka uses a pull model for consumers, where consumers poll the broker to retrieve messages at their own pace. This model gives

consumers more control over flow and backpressure, improving scalability and reliability.

NEW QUESTION # 44
Which property in broker configuration specifies that a broker belongs to a particular rack?

- A. kafka.rack
- B. client.rack
- C. zookeeper.rack
- D. broker.rack

Answer: D

Explanation:
The broker.rack property is used in a Kafka broker's configuration to specify the rack or availability zone the broker belongs to. This is important for rack-aware replica placement, allowing Kafka to distribute replicas across different racks for fault tolerance.

NEW QUESTION # 45
A developer is working for a company with internal best practices that dictate that there is no single point of failure for all data stored.
What is the best approach to make sure the developer is complying with this best practice when creating Kafka topics?

- A. Set 'min.insync.replicas' to 1.
- B. Use the parameter --partitions=3 when creating the topic.
- C. Set the topic replication factor to 3.
- D. Make sure the topics are created with linger.ms=0 so data is written immediately and not held in batch.

Answer: C

Explanation:
Replication factor determines how many copies of each partition exist across different brokers. A replication factor of 3 ensures that even if one or two brokers fail, the data is still available, thus eliminating a single point of failure.

NEW QUESTION # 46
What are important factors in sizing a ksqlDB cluster? (Choose three.)

- A. Number of Partitions
- B. Data Encryption
- C. Number of Queries
- D. Data Schema
- E. Topic Data Retention

Answer: A,C,D

Explanation:
The complexity of the schema (number of fields, data types, etc.) affects processing and memory usage.
Each ksqlDB persistent query consumes resources (CPU, memory), so more queries require more capacity.
More partitions increase parallelism, but also resource usage, especially in scaling and state management.

NEW QUESTION # 47
......

The Prep4sureGuide is a trusted and reliable platform that has been helping the Confluent Certified Administrator for Apache Kafka (CCAAK) certification exam candidates for many years. Over this long time period, the Prep4sureGuide CCAAK exam practice questions have helped the CCAAK exam candidates in their preparation and enabled them to pass the challenging exam on the first attempt. You can also trust Prep4sureGuide CCAAK Exam Practice questions and start preparation with complete peace of mind

and satisfaction.
