New Palo Alto Networks XSIAM-Analyst Exam Objectives, XSIAM-Analyst Reliable Cram Materials

We have three versions of our XSIAM-Analyst certification guide, and they are PDF version, software version and online version. With the PDF version, you can print our materials onto paper and learn our XSIAM-Analyst exam study guide in a more handy way as you can take notes whenever you want to, and you can mark out whatever you need to review later. With the software version, you are allowed to install our XSIAM-Analyst Guide Torrent that operate in windows system. With the online version, you can study the XSIAM-Analyst guide torrent wherever you like as it can used on all kinds of eletronic devices.

Palo Alto Networks XSIAM Analyst Sample Questions (Q50-Q55):

NEW QUESTION # 50
Match each prioritization mechanism with its function:
Mechanism
A) Incident Scoring
B) Alert Starring
C) Featured Fields
D) Incident Domains
Function
1. Assigns dynamic priority to incidents
2. Manually flagging alerts for importance
3. Provide context for faster investigation
4. Group alerts by threat or identity dimension
Response:

- A. A-1, B-3, C-2, D-4
- B. A-1, B-2, C-4, D-3
- C. A-4, B-2, C-3, D-1
- D. A-1, B-2, C-3, D-4

Answer: D

NEW QUESTION # 51
During an investigation, an analyst runs the reputation script for an indicator that is listed as Suspicious. The new reputation results display in the War Room as Malicious; however, the indicator verdict does not change.
What is the cause of this behavior?

- A. The indicator exists as an IOC rule.
- B. The indicator is expired.
- C. The indicator has been excluded.
- D. The indicator verdict was manually set to Suspicious.

Answer: D

Explanation:
A manually assigned verdict locks the indicator's status; automated reputation updates (like the script result showing Malicious) do not override a manual verdict, so it remains Suspicious.

NEW QUESTION # 52
An on-demand malware scan of a Windows workstation using the Cortex XDR agent is successful and detects three malicious files. An analyst attempts further investigation of the files by right-clicking on the scan result, selecting "Additional data," then "View related alerts," but no alerts are reported.
What is the reason for this outcome?

- A. The malicious files were true positives and were automatically quarantined from the scan results
- B. The malicious files are currently in an excluded directory in the Malware Profile
- C. The malicious files were false positives and were automatically removed from the scan results
- D. The malware scan action detects malicious files but does not generate alerts for them

Answer: D

Explanation:

The correct answer isB. The malware scan action detects malicious files but does not generate alerts for them.
In Cortex XSIAM and XDR, an on-demand malware scan effectively identifies malicious files on an endpoint. However, such scans typically record their findings directly in the scan results without generating separate alerts. Alerts are generally created through real-time protection mechanisms or detection rules, not through manually triggered scans.
Exact Reference from Official Document:
"The on-demand malware scan capability is designed to detect and identify malicious files but does not automatically generate alerts for those files. Alerts are primarily generated through real-time endpoint protection policies and detection rules." Therefore, the absence of alerts despite successful malware detection is due to the designed behavior of on- demand scans.

NEW QUESTION # 53
Which option allows continuous monitoring and triage of evolving threats?
Response:

- A. Asset status logs
- B. Live terminal execution
- C. Attack Surface Threat Response Center
- D. Threat intelligence API

Answer: C

NEW QUESTION # 54
An incident in Cortex XSIAM contains the following series of alerts:
10:24:17 AM - Informational Severity - XDR Analytics BIOC - Rare process execution in organization
10:24:18 AM - Low Severity - XDR BIOC - Suspicious AMSI DLL load location
10:24:20 AM - Medium Severity - XDR Agent - WildFire Malware
11:57:04 AM - High Severity - Correlation - Suspicious admin account creation
Which alert was responsible for the creation of the incident?

- A. Suspicious admin account creation
- B. Suspicious AMSI DLL load location
- C. Rare process execution in organization
- D. WildFire Malware

Answer: C

Explanation:
An incident is opened by the first alert that triggers it. The earliest alert here is at 10:24:17 AM ("Rare process execution in organization"), so that alert created the incident.

NEW QUESTION # 55
.....

This simply means that, with generics, the ultimate type XSIAM-Analyst is not bound until runtime, Many of the most respected Oracle experts in the field build test cases all the time.

You will always find ValidVCE's dumps questions XSIAM-Analyst Reliable Cram Materials as the best alternative of your money and time, While if you think it is boring to study with papers, we provide the XSIAM-Analyst Vce Files for you, you can simulate the actual test with our VCE test engine.

Free PDF 2026 XSIAM-Analyst: Palo Alto Networks XSIAM Analyst – Professional Test Quiz
