Exam-Killer has a strong IT elite team. They use their professional eyes searching the latest AWS-Solutions-Architect-Associate braindumps and AWS-Solutions-Architect-Associate certification training materials. With them, you can save more time to study and pass the AWS-Solutions-Architect-Associate Exam. After you purchase our AWS-Solutions-Architect-Associate exam dumps, we will offer free update service in one year.

How to book the AWS Solutions Associate

To apply for the AWS Solutions Associate, You have to follow these steps:

- Step 1: Go to the AWS-Solutions-associate-Professional Official Site
- Step 2: Read the instruction Carefully
- Step 3: Follow the given steps
- Step 4: Apply for the AWS-Solutions-associate-Professional Exam

AWS Solutions Associate Certified Professional salary

The estimated average salary of AWS Solutions Associate is listed below:

- Europe: 122,755 EURO
- United States: 149,446 USD
- India: 10,893,118 INR
- England: 105,649 POUND

Reliable AWS-Solutions-Architect-Associate Exam Price, AWS-Solutions-Architect-Associate Free Vce Dumps

One advantage is that if you use our AWS-Solutions-Architect-Associate practice questions for the first time in a network environment, then the next time you use our study materials, there will be no network requirements. You can open the AWS-Solutions-Architect-Associate real exam anytime and anywhere. It means that it can support offline practicing. And our AWS-Solutions-Architect-Associate learning braindumps are easy to understand for the questions and answers are carefully compiled by the professionals.

Who should take the AWS Solutions Associate

The candidate most suitable for AWS Certified Solutions associate - Associate Professional Exam would be the one with at least 1 year of practical experience designing secure, high-performing, cost-effective, highly usable, and scalable systems by using Amazon Web Services. The candidate would also have some knowledge about the following:

- The capacity to recognise and interpret technical specifications for a solution that includes AWS technology
- Knowledge of best practices for developing well-associated solutions on Amazon Web Services
- The sense to identify which AWS services are most suitable for a given technical need
- Have an understanding of AWS security services and characteristics in relation to traditional services

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q454-Q459):

NEW QUESTION # 454

Your company previously configured a heavily used, dynamically routed VPN connection between your on-premises data center and AWS. You recently provisioned a DirectConnect connection and would like to start using the new connection. After configuring DirectConnect settings in the AWS Console, which of the following options will provide the most seamless transition for your users?

- **A. Configure your DirectConnect router, update your VPC route tables to point to the DirectConnect connection, configure your VPN connection with a higher BGP priority. And verify network traffic is leveraging the DirectConnect connection.**
- B. Delete your existing VPN connection to avoid routing loops configure your DirectConnect router with the appropriate settings and verify network traffic is leveraging DirectConnect.
- C. Configure your DirectConnect router with a higher BGP priority than your VPN router, verify network traffic is leveraging DirectConnect and then delete your existing VPN connection.
- D. Update your VPC route tables to point to the DirectConnect connection configure your DirectConnect router with the appropriate settings verify network traffic is leveraging DirectConnect and then delete the VPN connection.

Answer: A

NEW QUESTION # 455

A team has an application that detects new objects being uploaded into an Amazon S3 bucket. The uploads trigger AWS Lambda function to write object metadata into an Amazon DynamoDB table and an Amazon RDS for PostgreSQL database. Which action should the team take to ensure high availability?

- A. Enable Cross-Region Replication in the S3 bucket.
- B. Create a Lambda function for each Availability Zone the application is deployed in.
- C. Create a DynamoDB stream for the DynamoDB table.
- **D. Enable Multi-AZ on the RDS for PostgreSQL database.**

Answer: D

NEW QUESTION # 456

A three-tier application is being created to host small news articles. The application is expected to serve millions of users. When breaking news occurs, the site must handle very large spikes in traffic without significantly impacting database performance. Which design meets these requirements while minimizing costs?

- A. Use Auto Scaling groups to increase the size of the Amazon RDS instances delivering the database
- B. Use Auto Scaling groups to increase the number of Amazon EC2 instances delivering the web application
- C. Use Amazon DynamoDB strongly consistent reads to adjust for the increase in traffic
- **D. Use Amazon DynamoDB Accelerator (DAX) to cache read operations to the database**

Answer: D

NEW QUESTION # 457

A security team wants to limit access to specific services or actions in all of the team's AWS accounts. All accounts belong to a large organization in AWS Organizations. The solution must be scalable and there must be a single point where permissions can be maintained.

What should a solutions architect do to accomplish this?

- A. Create cross-account roles in each account to deny access to the services or actions.
- B. Create an ACL to provide access to the services or actions.
- C. Create a service control policy in the root organizational unit to deny access to the services or actions
- D. Create a security group to allow accounts and attach it to user groups

Answer: C

Explanation:

Explanation

https://docs.aws.amazon.com/organizations/latest/userguide/orgs_manage_policies_scp.html

Service Control Policy concepts

SCPs offer central access controls for all IAM entities in your accounts. You can use them to enforce the permissions you want everyone in your business to follow. Using SCPs, you can give your developers more freedom to manage their own permissions because you know they can only operate within the boundaries you define.

You create and apply SCPs through AWS Organizations. When you create an organization, AWS Organizations automatically creates a root, which forms the parent container for all the accounts in your organization. Inside the root, you can group accounts in your organization into organizational units (OUs) to simplify management of these accounts. You can create multiple OUs within a single organization, and you can create OUs within other OUs to form a hierarchical structure. You can attach SCPs to the organization root, OUs, and individual accounts. SCPs attached to the root and OUs apply to all OUs and accounts inside of them. SCPs use the AWS Identity and Access Management (IAM) policy language; however, they do not grant permissions. SCPs enable you set permission guardrails by defining the maximum available permissions for IAM entities in an account. If a SCP denies an action for an account, none of the entities in the account can take that action, even if their IAM permissions allow them to do so. The guardrails set in SCPs apply to all IAM entities in the account, which include all users, roles, and the account root user.

NEW QUESTION # 458

Select the correct set of options. These are the initial settings for the default security group:

- A. Allow all inbound traffic, Allow no outbound traffic and Allow instances associated with this security group to talk to each other
- B. Allow no inbound traffic, Allow all outbound traffic and Allow instances associated with this security group to talk to each other
- C. Allow no inbound traffic, Allow all outbound traffic and Does NOT allow instances associated with this security group to talk to each other
- D. Allow all inbound traffic, Allow all outbound traffic and Does NOT allow instances associated with this security group to talk to each other

Answer: B

Explanation:

A default security group is named default, and it has an ID assigned by AWS. The following are the initial settings for each default security group:

Allow inbound traffic only from other instances associated with the default security group Allow all outbound traffic from the instance

The default security group specifies itself as a source security group in its inbound rules. This is what allows instances associated with the default security group to communicate with other instances associated with the default security group.
