Reliable C-SEC-2405 Test Questions | Excellect C-SEC-2405 Pass Rate

The prime objective of our SAP C-SEC-2405 PDF is to improve your knowledge and skills to the level that you get attain success easily without facing any difficulty. For this purpose, Actual4dump hired the services of the best industry experts for developing exam dumps and hence you have preparatory content that is unique in style and filled with information. Each Actual4dump brain dump, included in the C-SEC-2405 Brain Dumps PDF is significant and may also is the part of the actual exam paper.

SAP Certified Associate - Security Administrator Sample Questions (Q66-Q71):

NEW QUESTION # 66
When performing a comparison from the imparting role, what happens to organizational level field values in the derived role? Note: There are 2 correct answers to this question.

- A. Data for organizational levels is always transferred when authorization data for the derived role is modified.
- B. Data for organizational levels is transferred only when authorization data for the derived role is first modified.
- C. Data for organizational levels that have already been maintained in the derived role is overwritten.
- D. Data for organizational levels that have already been maintained in the derived role is NOT overwritten.

Answer: B,D

Explanation:

In SAP S/4HANA, when performing a comparison from an imparting (parent) role to a derived role, organizational level field values are handled with specific rules to maintain consistency and flexibility. Data for organizational levels that have already been maintained in the derived role is not overwritten, preserving any custom configurations made specifically for the derived role. This ensures that existing organizational assignments, such as company codes or plants, remain intact unless explicitly changed. Additionally, data for organizational levels is transferred from the imparting role to the derived role only when the authorization data for the derived role is first modified. This conditional transfer prevents unnecessary updates to organizational values until changes are initiated, allowing administrators to control when inherited values are applied. These mechanisms support efficient role maintenance while protecting customized settings in derived roles, ensuring alignment with business requirements and security policies.

NEW QUESTION # 67

Which entities share data with Business Partners in the S/4HANA Business User Concept? Note: There are 2 correct answers to this question.

- A. Employer
- B. Employee
- C. Administrator
- D. User

Answer: B,D

Explanation:
In the SAP S/4HANA Business User Concept, the entities that share data with Business Partners are User and Employee. The User entity represents the technical user account in the system, defined in user master records, and is linked to Business Partners to associate system access with business roles and authorizations. The Employee entity represents the human resource data of an individual, such as their organizational assignment or job role, and is synchronized with Business Partners to ensure that user access aligns with their employment details. This integration ensures that Business Partners, which serve as a central entity for managing business relationships, have consistent data for access control and business processes. The Employer entity is not directly linked to Business Partners, as it represents the organization, not an individual.
Similarly, Administrator is a role or user type, not an entity sharing data with Business Partners. This data- sharing mechanism supports seamless identity and access management, enhancing security and operational alignment in SAP S/4HANA systems.

NEW QUESTION # 68

In the SAP BTP Cockpit, at which level is Trust Configuration available? Note: There are 2 correct answers to this question.

- A. Organization
- B. Directory
- C. Global Account
- D. Subaccount

Answer: C,D

Explanation:
In the SAP Business Technology Platform (BTP) Cockpit, Trust Configuration is available at both the Global Account and Subaccount levels. At the Global Account level, trust configurations define the identity provider (IdP) settings that apply across all subaccounts within the account, enabling centralized management of authentication for the entire BTP environment. This allows administrators to establish a default IdP or configure custom IdPs for consistent user authentication. At the Subaccount level, trust configurations provide flexibility to override or customize the IdP settings specific to individual subaccounts, accommodating unique requirements for different applications or services. This dual-level approach ensures that organizations can balance global standardization with localized control. The Directory and Organization levels are not used for trust configurations in SAP BTP, as these are not part of the platform's security configuration hierarchy, making options C and D incorrect.

NEW QUESTION # 69

What happens to data within SAP Enterprise Threat Detection during the aggregation process? Note: There are 3 correct answers to this question.

- A. It is normalized.
- B. It is prioritized.

- C. It is pseudonymized.
- D. It is enriched.
- E. It is categorized.

Answer: A,C,D

Explanation:
During the aggregation process in SAP Enterprise Threat Detection, data undergoes several transformations to ensure it can be effectively analyzed for threats while maintaining privacy and enhancing usability.
* Pseudonymization (B):Sensitive data is pseudonymized to protect privacy. This ensures that personally identifiable information (PII) is masked while still being analyzable for patterns and anomalies.
* Normalization (D):Data from various sources is normalized into a consistent format. This is critical for correlating and analyzing logs from diverse systems.
* Enrichment (E):Additional context is added to the data to enhance its value. For example, IP addresses might be enriched with geolocation data, or event logs might be augmented with user attributes.

NEW QUESTION # 70
What must you do before you can use transaction PFCG? Note: There are 2 correct answers to this question.

- A. Set the system profile parameter auth/no_check_in_some_cases to N.
- B. Fill tables USOBT and USOBX with the SAP-delivered authorization default values.
- C. Fill tables USOBT_C and USOBX_C with the SAP-delivered authorization default values.
- D. Set the system profile parameter auth/no_check_in_some_cases to Y.

Answer: B,D

Explanation:
Before using transaction PFCG (Role Maintenance) in SAP systems, two prerequisites must be met. First, tables USOBT (Authorization Object Defaults) and USOBX (Check Indicators) must be filled with SAP- delivered authorization default values, which provide the standard authorization objects and check indicators for transactions. These tables, maintained via transaction SU25, ensure that PFCG can propose appropriate authorizations when building roles. Second, the system profile parameter auth/no_check_in_some_cases must be set to Y, enabling the system to bypass authorization checks for certain transactions, which is necessary for PFCG to function correctly during role creation and maintenance. Setting this parameter to N would enforce stricter checks, potentially restricting PFCG functionality. Tables USOBT_C and USOBX_C are customer- specific and not required for initial PFCG setup, as they store customized values rather than SAP defaults.
These steps ensure that PFCG operates effectively, supporting secure and efficient role management in SAP environments.

NEW QUESTION # 71
......

Preparing authentic SAP C-SEC-2405 questions in the form of a PDF file is significant because it is the only choice that guarantees your success in the C-SEC-2405 exam. SAP C-SEC-2405 PDF questions are accessible without any installation. You will need a few days to prepare successfully for the C-SEC-2405 Exam if you have Actual4dump's SAP Exam PDF Questions. This PDF file of SAP C-SEC-2405 questions is supported by any device like laptops, tablets, and smartphones.

SAP Reliable C-SEC-2405 Test Questions can provide you first-class products and service, Every staff and expert not only provides the candidates with the best qualified C-SEC-2405 study engine but also protects candidates from any fake transactions and frauds, Which different Actual4dump Reliable C-SEC-2405 Test Questions products are available, SAP Latest C-SEC-2405 Test Materials How to solve this problem is your new trouble.

Just who are they and why are they able to topple large and C-SEC-2405 established businesses, Other folders may include Drafts, Sent Items, Deleted Items, Junk E-mail, and Outbox.
