UiPath UiPath-ADPv1 시험요강:

주제	소개
주제 1	• Design and Development: This section covers designing workflows using sequences, flowcharts, and state machines, building reusable components with libraries, exception handling and debugging techniques, etc.
주제 2	• UiPath Studio Fundamentals: In this section, the focus is given to the understanding of Robotic Process Automation (RPA) concepts; it covers UiPath Studio and its components, Working with the UiPath user interface, project creation, management, and version control.
주제 3	• UiPath Activities: In this section, the discussion is related to various UiPath activities for UI interaction, data manipulation, control flow, and more.
주제 4	• Debugging and Testing: This section is about utilizing logging and debugging tools and adopting unit testing and test automation strategies.

UiPath-ADPv1 최신버전 dumps: UiPath (ADPv1) Automation Developer Professional & UiPath-ADPv1 덤프데모

UiPath인증 UiPath-ADPv1시험을 통과하여 자격증을 취득하여 IT 업계에서의 자신의 자리를 지키려면 많은 노력이 필요합니다. 회사일도 바쁜데 시험공부까지 스트레스가 장난아니게 싸이고 몸도 많이 상하겠죠. ITDumpsKR는 여러분을 위해 최신UiPath인증 UiPath-ADPv1시험에 대비한UiPath인증 UiPath-ADPv1덤프를 발췌하였습니다. UiPath인증 UiPath-ADPv1덤프는UiPath인증 UiPath-ADPv1시험의 기출문제와 예상문제가 묶어져 있어 시험적중율이 굉장히 높습니다. 쉽게 시험을 통과하려면ITDumpsKR의 UiPath인증 UiPath-ADPv1덤프를 추천합니다.

최신 UiPath Certified Professional - Developer Track UiPath-ADPv1 무료샘플문제 (Q179-Q184):

질문 # 179
Given the following variables assignments:
What will the output of the following conditional be: outputX = If(CInt(doubleX+Cdbl(intX)
+CDbl(stringX))> 38.30, 1, 0)

- A. 0
- B. 1
- C. Error during runtime
- D. Compilation error

정답：C

설명：
The conditional statement attempts to convert all variables to Double and then adds them up to compare against 38.30. However, the string "9.1" cannot be directly converted to a Double with CDbl because it is not in a correct format that can be recognized as a number (it might be due to the fact that it's a string with a comma instead of a period for a decimal point, depending on the culture settings of the system). This will cause a runtime error during the execution of the conditional statement.References:

질문 # 180
An error occurs during the Initialization state within the #'FrameworkMnitAIISettings.xaml" file for a process using REFramework which is executed on Orchestrator. The project contains default values for the settings specified in "Config.xlsx".
What is the current state of the job in Orchestrator?

- A. Faulted
- B. Successful
- C. Stopped
- D. Suspended

정답：A

설명：
The current state of the job in Orchestrator is Faulted, because an error occurred during the Initialization state of the process using REFramework. The REFramework is a template for creating robust and scalable automation projects that uses the State Machine workflow type1. The Initialization state is the first state in the REFramework, which is responsible for initializing the application, reading the configuration file, and setting the log level2. If an error occurs during the Initialization state, the process will go to the End Process state, which will perform the final actions and close the application2. The End Process state will also mark the job as Faulted in Orchestrator, if the value of the ShouldMarkJobAsFaulted argument is True2. The default value of this argument in the REFramework is True, unless it is changed in the Config.xlsx file or in the Orchestrator assets3.
Option A is incorrect, because the job is not Successful, as an error occurred during the Initialization state.
Option C is incorrect, because the job is not Suspended, as the process did not pause or wait for any user input. Option D is incorrect, because the job is not Stopped, as the process did not encounter any user intervention or manual termination.

질문 # 181
What actions must be manually selected in the App/Web Recorder before recording a step?

- A. Select or clear a check box.
  Send keyboard shortcuts using your keyboard.
  Select an item from a drop-down.
- B. Copy text using the Get Text activity.
  Hover over an element using the Hover activity.
  Highlight an element using the Highlight activity.
- C. Copy text using the Get Text activity.
  Hover over an element using the Hover activity.
  Click on buttons, links, and other clickable elements such as icons or images.
  Type text in a text area such as a text box.
  Select or clear a check box.
- D. Click on buttons, links, and other clickable elements such as icons or images.
  Type text in a text area such as a text box.
  Select or clear a check box.
  Send keyboard shortcuts using your keyboard.
  Select an item from a drop-down.

정답：D

설명：
In UiPath's App/Web Recorder, certain actions need to be selected or indicated before they can be recorded.
These include:
*Clicking on buttons, links, and other interactive elements.
*Typing text into input fields.
*Selecting or clearing checkboxes.
*Sending keyboard shortcuts.
*Selecting items from drop-down menus.
Based on these common actions that are typically used in UiPath recording, the answer that best fits is:
A: Click on buttons, links, and other clickable elements such as icons or images. Type text in a text area such as a text box. Select or clear a check box. Send keyboard shortcuts using your keyboard. Select an item from a drop-down.
These are the actions that you would manually select or perform during the recording process to automate interactions with a UI.

질문 # 182
What are the four job types present in the Job Type field according to the place of execution and robot impersonation?

- A. Service unattended. Personal remote, Attended. Development.
- B. Foreground unattended, Background unattended. Attended, Development.
- C. Orchestrator unattended, Personal remote, User attended, Studio.
- D. Service unattended, User remote. Attended, Debugging.

정답：B

설명：
In UiPath, the four job types according to the place of execution and robot impersonation are Foreground unattended, Background unattended, Attended, and Development. These job types differentiate the automation tasks based on whether they require user interaction (Attended), can run in the background without user intervention (Background unattended), are designed for development and testing purposes (Development), or are unattended tasks that require a virtual environment (Foreground unattended).References: UiPath Orchestrator Guide: Job Types

질문 # 183
A user is working on their computer while an automation is running in PiP mode. What can the user do while the process runs?

- A. Access files and modify documents without interrupting the automation.
- B. Open a second PiP window to run a different automation.
- C. Suspend the PiP session and resume it later without affecting the automation.
- D. Directly interact with the automation running in PiP mode.

정답：A

설명：
Picture-in-Picture (PiP)mode allows the automation to run in anisolated desktop session, enabling theuser to continue working in their main desktop session. While the PiP session runs the automation, the user can access files and modify documentsin their own sessionwithout interference, making it ideal for attended automations.
