## GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q51-Q56):

### NEW QUESTION # 51

A keyed lock on a facility's back door is an example of which type of control?

- A. Corrective
- B. Avoidant
- C. Responsive
- **D. Delaying**

**Answer: D**

Explanation:

A keyed lock is a delaying control (D) because it physically slows down or impedes unauthorized access to a facility, giving security personnel more time to respond.

Avoidant controls (A) prevent risk by eliminating it.

Responsive controls (B) act after an incident occurs.

Corrective controls (C) fix or restore systems after an incident.

GICSP emphasizes physical delaying controls as part of defense-in-depth strategies.

#### NEW QUESTION # 52

What is the purpose of conducting a risk assessment when developing an ICS security program?

Response:

- A. To determine network speeds
- B. To simplify software updates
- C. To increase data storage capacity
- **D. To identify and prioritize potential threats**

**Answer: D**

#### NEW QUESTION # 53

How are general purpose Programmable Logic Controllers (PLC) different than smart field devices?

- A. Programmable Logic Controllers are usually microcontroller-based
- **B. Programmable Logic Controllers have a more limited purpose and function**
- C. Smart field devices cannot be controlled centrally from a management server
- D. Smart field devices contain their own control logic that cannot be changed

**Answer: B**

Explanation:

General-purpose PLCs are designed to perform a wide range of control tasks, programmed to execute complex control logic and interact with multiple I/O points, making them versatile controllers in industrial automation.

In contrast, smart field devices (like smart transmitters or actuators) are typically dedicated to specific measurement or control functions and may have embedded intelligence for self-calibration, diagnostics, or simple control, but with a more limited purpose and function (C).

(A) is incorrect because smart field devices often can be managed remotely.

(B) is true but not a differentiating functional characteristic.

(D) is incorrect; smart field devices often have configurable logic or settings.

GICSP training differentiates these device classes to tailor cybersecurity controls effectively.

#### NEW QUESTION # 54

In an ICS environment, what is the Recovery Time Objective (RTO) used to define?

Response:

- A. The time needed to detect an incident
- **B. The maximum acceptable amount of time to restore a system after an incident**
- C. The amount of data loss that is acceptable after an incident
- D. The average time between system maintenance

**Answer: B**

#### NEW QUESTION # 55

What type of attack targets Level 0 and Level 1 devices to disrupt physical processes in ICS environments?

Response:

- A. Replay attacks
- B. Phishing attacks
- C. Denial-of-service (DoS) attacks
- D. Man-in-the-middle (MitM) attacks

Answer: A
