

# PAP-001 Valid Exam Camp Pdf, PAP-001 Knowledge Points

What's more, part of that GuideTorrent PAP-001 dumps now are free: <https://drive.google.com/open?id=1Eb7auYdPQ38mXGz7xazoPPskH84668MN>

GuideTorrent provides free new Ping Identity PAP-001 latest exam dumps pdf demo to download for your reference so that you will share risk free shopping. Also we encourage every buyer use PayPal payment which also guarantees your money safety. We are engaging in not only providing the highest quality of PAP-001 Latest Exam Dumps pdf but also the satisfying customer service. If you have any doubt, we will solve for you until you are satisfied.

## Ping Identity PAP-001 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• Policies and Rules: This section of the exam measures the skills of Security Administrators and focuses on how PingAccess evaluates paths for applying policies and resources. It covers the role of different rule types, their configuration, and the implementation of rule sets and rule set groups for consistent policy enforcement.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• General Configuration: This section of the exam measures skills of Security Administrators and introduces the different object types within PingAccess such as applications, virtual hosts, and web sessions. It explains managing application resource properties, creating web sessions, configuring identity mappings, and navigating the administrative console effectively.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• General Maintenance and File System: This section of the exam measures the skills of System Engineers and addresses maintenance tasks such as license management, backups, configuration imports or exports, auditing, and product upgrades. It also includes the purpose of log files and an overview of the PingAccess file system structure with important configuration files.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• Security: This section of the exam measures skills of Security Administrators and highlights how to manage certificates and certificate groups. It covers the association of certificates with virtual hosts or listeners and the use of administrator roles for authentication management.</li> </ul>

Topic 5	<ul style="list-style-type: none"><li>• Integrations: This section of the exam measures skills of System Engineers and explains how PingAccess integrates with token providers, OAuth and OpenID Connect configurations, and site authenticators. It also includes the use of agents and securing web, API, and combined applications through appropriate integration settings.</li></ul>

## Updated Ping Identity PAP-001 Valid Exam Camp Pdf Offer You The Best Knowledge Points | Certified Professional - PingAccess

Desktop Certified Professional - PingAccess (PAP-001) practice exam software also keeps track of the earlier attempted PAP-001 practice test so you can know mistakes and overcome them at each and every step. The Desktop PAP-001 Practice Exam software is created and updated in a timely by a team of experts in this field. If any problem arises, a support team is there to fix the issue.

### Ping Identity Certified Professional - PingAccess Sample Questions (Q21-Q26):

#### NEW QUESTION # 21

Which of the following is a processing rule?

- A. Web Session Attribute
- **B. Cross-Origin Request**
- C. HTTP Request Parameter
- D. HTTP Request Header

**Answer: B**

Explanation:

PingAccess rules are categorized into Access Control Rules and Processing Rules.

\* Processing Rules modify or add to HTTP requests and responses.

\* Cross-Origin Request (CORS) is specifically listed as a Processing Rule, because it modifies response headers to support cross-origin requests.

Exact Extract:

"Processing rules apply to HTTP traffic, such as Cross-Origin Resource Sharing (CORS), header injection, or response modification."

\* Option A (Web Session Attribute) is an access control rule.

\* Option B (Cross-Origin Request) is correct - this is a processing rule.

\* Option C (HTTP Request Parameter) is an access control rule.

\* Option D (HTTP Request Header) is an access control rule.

Reference: PingAccess Administration Guide - Rules Overview

#### NEW QUESTION # 22

An application owner would like customized errors for rule violations within an application. Where is this configured?

- A. Within the Rule definition
- B. When combining Rules into Rule Sets
- C. When assigning a Rule to a Resource
- **D. Within the Root Resource of the Application**

**Answer: D**

Explanation:

PingAccess allows administrators to configure custom error pages or messages at the Root Resource level of an application. This ensures that when rule violations (e.g., authorization failures) occur, the application can display tailored error responses.

Exact Extract:

"Custom error handling for rule violations is configured within the Root Resource of an application."

- \* Option A is incorrect - assigning a rule to a resource does not allow defining custom errors.
- \* Option B is correct - the Root Resource is where administrators define custom error handling for the entire application.
- \* Option C is incorrect - Rule Sets only combine rules; they do not handle error responses.
- \* Option D is incorrect - individual rule definitions do not contain custom error configurations.

### NEW QUESTION # 23

An administrator is setting up a new PingAccess cluster with the following:

- \* Administrative node hostname: pa-admin.company.com
- \* Replica administrative node hostname: pa-admin2.company.com

Which two options in the certificate would be valid for the administrative node key pair? (Choose 2.)

- A. Subject Alternative Names = pa-admin.company.com, pa-admin2.company.com
- B. Subject = \*.company.com
- C. Issuer = pa-admin.company.com
- D. Subject = pa-admin2.company.com
- E. Subject = pa-admin.company.com

**Answer: A,B**

Explanation:

Exact Extract (from PingAccess documentation):

"The key pair that you create for the CONFIG QUERY listener must include both the administrative node and the replica administrative node. To make sure the replica administrative node is included, you can either use a wildcard certificate or define subject alternative names in the key pair that use the replica administrative node's DNS name." Why B and D are correct:

\* B. Subject = \*.company.com - A wildcard certificate for \*.company.com is valid for both pa-admin.

company.com and pa-admin2.company.com, satisfying the documented requirement that the key pair include both hostnames for the CONFIG QUERY listener.

\* D. Subject Alternative Names = pa-admin.company.com, pa-admin2.company.com - Explicitly placing both DNS names in the SAN extension also satisfies the requirement that the certificate cover both the administrative node and the replica administrative node.

Why the other options are incorrect:

\* A. Issuer = pa-admin.company.com - The Issuer field identifies the certificate authority (CA) that signed the certificate, not the service hostname. Setting the issuer to a host value is not how X.509 server certificates are validated and would not meet the hostname#matching requirement.

\* C. Subject = pa-admin.company.com - While this covers the administrative node, it does not include the replica administrative node. Without a wildcard or SAN entries, it fails the requirement that the key pair include both hostnames.

\* E. Subject = pa-admin2.company.com - Similarly, this would only cover the replica administrative node and not the primary administrative node, failing the requirement.

### NEW QUESTION # 24

Which element in the log4j2.xml file must be modified to change the log level in PingAccess?

- A. Logger
- B. RollingFile
- C. AsyncLogger
- D. Appenders

**Answer: A**

Explanation:

In Log4j2, the Logger element controls the log level (INFO, DEBUG, ERROR, etc.) for specific packages or classes.

Exact Extract:

"To modify logging levels, edit the <Logger> element in log4j2.xml and change the level attribute."

\* Option A (AsyncLogger) is a performance optimization, not for changing levels.

\* Option B (RollingFile) defines file rotation, not log levels.

\* Option C (Logger) is correct - this is where log levels are defined.

\* Option D (Appenders) define output destinations, not severity levels.

Reference: PingAccess Administration Guide - Log Configuration

## NEW QUESTION # 25

During a business review of an application, the administrator needs to change the Resource Authentication to anonymous. What are the two effects of making this change to the resource? (Choose 2 answers.)

- A. The resource requires no further authentication, and Processing rules still apply.
- B. The resource requires no further authentication, and no rules will apply.
- C. The resource requires no further authentication, and all Access Control rules still apply.
- D. The resource requires no further authentication, and Identity Mappings still apply.
- E. Requests to this resource are not logged, and Identity Mappings are applied.

Answer: A,D

Explanation:

When a resource is configured as anonymous, PingAccess does not challenge the user for authentication.

However, certain processing and identity propagation still occur.

Exact Extract:

"Anonymous resources do not require authentication. Identity mappings and request/response processing rules still apply."

\* Option A is incorrect because rules such as identity mappings and processing still apply.

\* Option B is correct - Identity Mappings can still forward attributes, even for anonymous access.

\* Option C is correct - Processing rules (e.g., request/response modifications) still apply.

\* Option D is incorrect - requests are logged; anonymous does not disable logging.

\* Option E is incorrect - access control rules (authorization) are not evaluated for anonymous resources.
