## Category-7A-General-and-Household-Pest-Control Reliable Test Question, Practice Category-7A-General-and-Household-Pest-Control Exams Free

In this social-cultural environment, the Category-7A-General-and-Household-Pest-Control certificates mean a lot especially for exam candidates like you. To some extent, these Category-7A-General-and-Household-Pest-Control certificates may determine your future. With respect to your worries about the practice exam, we recommend our Category-7A-General-and-Household-Pest-Control Preparation materials which have a strong bearing on the outcomes dramatically. For a better understanding of their features, please follow our website and try on them.

## OCPE Pesticide Applicator Category 7A General and Household Pest Control Exam Sample Questions (Q19-Q24):

NEW QUESTION # 19

To apply pesticides within a school building for roaches or flies requires a \_\_\_\_ license.

- A. 3B or 7B
- B. 7B
- **C. 7A and 13**
- D. 3A and 3B

**Answer: C**

Explanation:

Applying pesticides for roaches or flies inside a school building falls under Category 7A (General and Household Pest Control), which covers the management of pests like roaches, flies, and other household insects in structures, including schools. Additionally, because the application is in a school, Category 13 (School IPM) certification is required in New Jersey to comply with the School Integrated Pest Management Act (N.J.A.C. 7:30-13). Category 13 ensures applicators follow specific IPM protocols and notification requirements in educational settings. Option A (3B or 7B) is incorrect because 3B is for turf pest control, and 7B is for termites/wood-destroying insects, neither of which apply to roaches or flies.

Option B (3A and 3B) involves ornamental and turf pest control, which is irrelevant here. Option D (7B) is also incorrect as it does not cover general pests like roaches or flies.

#### **NEW QUESTION # 20**

Power sprayers:

- A. Need an annual calibration
- **B. Need to have their calibration checked to ensure the proper amount of pesticide is being delivered**
- C. Are pre-calibrated at the factory and further calibration is not necessary

**Answer: B**

Explanation:

Power sprayers must be calibrated to ensure the correct amount of pesticide is applied, as application rates can vary due to wear, nozzle changes, or pressure adjustments. The General Pest Management:

Guide for Commercial Applicators - Category 7A (Chapter 5: Pesticide Application) stresses that applicators should check calibration regularly to ensure accuracy, especially for Category 7A applications. Option A is incorrect because factory calibration does not account for field conditions or equipment changes. Option C (annual calibration) is a good practice but not a strict requirement; the need for calibration depends on usage and equipment condition.

#### **NEW QUESTION # 21**

Cockroaches develop through:

- A. Total metamorphosis (egg, adult)
- **B. Gradual metamorphosis (egg, nymph, adult)**
- C. Complete metamorphosis (egg, larva, pupa, adult)

**Answer: B**

Explanation:

Cockroaches undergo gradual metamorphosis, which includes three stages: egg, nymph, and adult.

Nymphs hatch from eggs and resemble smaller, wingless adults, molting several times before reaching maturity. The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 7:

Cockroaches) confirms this life cycle for common species like the German cockroach. Option B (complete metamorphosis) applies to insects like flies or beetles. Option C (total metamorphosis) is not a recognized term and is incorrect.

#### **NEW QUESTION # 22**

The IPM style of pest control includes:

- A. One-time reactive pesticide applications
- B. Pre-established pesticide applications according to a schedule
- **C. A reduction of pesticide use**

**Answer: C**

Explanation:

Integrated Pest Management (IPM) focuses on sustainable pest control by minimizing pesticide use and integrating multiple control methods (e.g., cultural, mechanical, biological). The General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 4: IPM) highlights that IPM aims for a reduction of pesticide use through prevention and non-chemical methods. Option A (pre-established applications) contradicts IPM's reactive, need-based approach. Option B (one-time reactive applications) may be part of IPM but does not capture its broader goal of reducing pesticide reliance.

#### NEW QUESTION # 23

The "recipe" used to mix the pesticide includes the:

- A. Percentage of water used
- B. Rate per given area
- **C. Total amount of pesticide concentrate and diluent**

**Answer: C**

Explanation:

The "recipe" for mixing a pesticide refers to the specific instructions for preparing the pesticide solution, which includes the total amount of pesticide concentrate (active ingredient) and diluent (e.g., water or another carrier) to achieve the correct concentration for application. This is detailed on the pesticide label and in the General Pest Management: Guide for Commercial Applicators - Category 7A (Chapter 5: Pesticide Application). Option B (percentage of water) is incorrect because the label specifies amounts, not percentages. Option C (rate per given area) refers to the application rate, not the mixing recipe.

#### NEW QUESTION # 24

.....

Different person has different goals, but our Test4Engine aims to help you successfully pass Category-7A-General-and-Household-Pest-Control exam. Maybe to pass Category-7A-General-and-Household-Pest-Control exam is the first step for you to have a better career in IT industry, but for our Test4Engine, it is the entire meaning for us to develop Category-7A-General-and-Household-Pest-Control exam software. So we try our best to extend our dumps, and our Test4Engine elite comprehensively analyze the dumps so that you are easy to use it. Besides, we provide one-year free update service to guarantee that the Category-7A-General-and-Household-Pest-Control Exam Materials you are using are the latest.
