The Professional Scrum Product Owner II prep torrent has a variety of self-learning and self-assessment functions to test learning outcome, which will help you increase confidence to pass exam.

Scrum Professional Scrum Product Owner II Sample Questions (Q26-Q31):

NEW QUESTION # 26

Which option can improve the "Time-to-market" (choose the best answer).

- A. Remove impediments to faster delivery.
- B. All of the above.
- C. Remove low performing team members.
- D. Work extra time.
- E. Add more people.

Answer: A

NEW QUESTION # 27

Which of the following are advantages of a Product Goal that is well-understood by the Scrum Team?
(choose the best three answers)

- A. It provides overall direction so Sprints will feel less like isolated pieces of work.
- B. It makes it easier to inspect incremental progress at the Sprint Review.
- C. It helps the Scrum Team keep focus and they can check any decision against it.
- D. It helps the Scrum Team to forecast when the entire Product Backlog will be delivered.
- E. A Product Goal is not mandatory in Scrum.

Answer: A,B,C

Explanation:

B: It helps the Scrum Team keep focus and they can check any decision against it: A well-understood Product Goal acts as a powerful magnet that propels Scrum teams towards value delivery³⁴. It guides efforts, prioritizes activities, fosters collaboration, and ensures focus on delivering value to customers³⁴.

C: It provides overall direction so Sprints will feel less like isolated pieces of work: The Product Goal provides context to the Product Backlog². It can be thought of as the 'why' we are doing all of this work². It can be used as the elevator pitch to 'what is the Scrum Team working on?'².

D: It makes it easier to inspect incremental progress at the Sprint Review: As each Increment is produced, the Product incrementally moves toward the Product Goal². How that value is incrementally determined is very context-specific².

NEW QUESTION # 28

The Developers inform the Product Owner during the Sprint that they are not likely to complete everything they forecasted. What would you expect a Product Owner to do?
(choose the best answer)

- A. End the Sprint, since the goal cannot be achieved.
- B. Inform management that more resources are needed.
- C. Reduce the scope of the Sprint, if possible, to still meet the Sprint Goal.
- D. Skip Product Backlog refinement activities.
- E. Change the Sprint Goal to match what the Developers can deliver.

Answer: C

Explanation:

According to the Professional Scrum Product Owner™ II certification guide¹, the Product Owner is accountable for maximizing the value of the product resulting from the work of the Scrum Team. This means that the Product Owner should collaborate with the Developers and the Scrum Master to find the best way to deliver value in the current Sprint, even if the initial forecast is not met. The Product Owner should not change or abandon the Sprint Goal, as it is a commitment made by the Scrum Team during Sprint Planning. The Product Owner should also not skip Product Backlog refinement activities, as they are essential for preparing the Product Backlog for future Sprints. The Product Owner should not end the Sprint prematurely, as it may cause more disruption and waste than delivering a potentially releasable Increment. The Product Owner should not inform management that more resources are needed, as it may imply that the Scrum Team is not self-organizing and cross-functional. The Product Owner should respect the Developers' autonomy and professionalism and support them in finding the best solution to the problem. Therefore, the best answer is to reduce the scope of the Sprint, if possible, to still meet the Sprint Goal. This means that the Product Owner and the Developers should negotiate the scope of the Sprint Backlog within the Sprint, removing or adding Product Backlog items that are aligned with the Sprint Goal and the value delivery. NEW QUESTION # 29

As a Product Owner you become aware that the quality assurance criteria, defined in the Definition of Done, were not met for the latest Increment. Which of the following statements are true?
(choose the best four answers)

- A. The next Sprint may be interrupted when quality issues are encountered.
- B. The indication of progress on the Product Backlog is not transparent.
- C. The Scrum Team should not release the Increment.
- D. The project manager cannot effectively update the plan.
- E. The incomplete Sprint Backlog items should be returned to the Product Backlog.

Answer: A,B,C,E

Explanation:

According to the Professional Scrum Product Owner™ II certification guide¹, the Definition of Done is a formal description of the state of the Increment when it meets the quality measures required for the product. The Definition of Done creates transparency by providing everyone a shared understanding of what work was completed and what standards were met as part of the Increment. If the Definition of Done is not met, the Increment is not Done and cannot be released. Therefore, the following statements are true:

A) The next Sprint may be interrupted when quality issues are encountered. This is true because the Scrum Team may have to spend time fixing the quality issues in the previous Increment before working on the new Sprint Backlog items. This may affect the Sprint Goal and the delivery of value.

C) The indication of progress on the Product Backlog is not transparent. This is true because the Product Backlog items that were supposedly Done in the previous Sprint are actually not Done according to the Definition of Done. This means that the Product Owner cannot accurately forecast the release plan and the stakeholders cannot trust the progress reports.

D) The Scrum Team should not release the Increment. This is true because releasing an Increment that does not meet the Definition of Done may compromise the quality, usability, and value of the product. It may also damage the reputation and trust of the Scrum Team and the organization.

E) The incomplete Sprint Backlog items should be returned to the Product Backlog. This is true because the Sprint Backlog items that were not Done according to the Definition of Done are still part of the Product Backlog. The Product Owner should re-order them based on their value and priority and decide when to include them in the next Sprint.

The following statement is false:

B) The project manager cannot effectively update the plan. This is false because there is no project manager role in Scrum. The Product Owner is responsible for managing the Product Backlog and the value delivery, while the Scrum Master is responsible for facilitating the Scrum process and removing impediments. The Developers are responsible for managing the Sprint Backlog and the quality of the Increment.

NEW QUESTION # 30

What type of indicator does value become if it is measured infrequently? (choose the best answer)

- A. A Leading indicator
- B. A Lagging indicator

Answer: B

NEW QUESTION # 31

.....
