Exam Dumps SOA-C02 Demo Exam Latest Release | Updated Amazon Reliable SOA-C02 Test Tips

As we all know, looking at things on a computer for a long time can make your eyes wear out and even lead to the decline of vision. We are always thinking about the purpose for our customers. To help customers solve problems, we support printing of our SOA-C02 exam torrent. We will provide you with three different versions. The PDF version allows you to download our SOA-C02 quiz prep. After you download the PDF version of our learning material, you can print it out. In this way, even if you do not have a computer, you can learn our SOA-C02 Quiz prep. We believe that it will be more convenient for you to take notes. Our website is a very safe and regular platform. You can download our SOA-C02 exam guide with assurance. You can take full advantage of the fragmented time to learn, and eventually pass the authorization of SOA-C02 exam.

Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q738-Q743):

NEW QUESTION # 738
A company has an AWS Cloud Formation template that creates an Amazon S3 bucket. A user authenticates to the corporate AWS account with their Active Directory credentials and attempts to deploy the Cloud Formation template. However, the stack creation fails.
Which factors could cause this failure? (Select TWO.)

- A. The user's IAM policy does not allow the cloudformation:CreateStack action.
- B. The user's IAM policy does not allow the s3:CreateBucket action.
- C. The user's IAM policy explicitly denies the s3:PutObject action
- D. The user's IAM policy explicitly denies the s3:ListBucket action.
- E. The user's IAM policy does not allow the cloudformation:CreateStackSet action.

Answer: A,B

NEW QUESTION # 739
A large company is using AWS Organizations to manage its multi-account AWS environment. According to company policy, all users should have read-level access to a particular Amazon S3 bucket in a central account. The S3 bucket data should not be available outside the organization. A SysOps administrator must set up the permissions and add a bucket policy to the S3 bucket. Which parameters should be specified to accomplish this in the MOST efficient manner?

- A. Specify the organization's management account as the principal.
- B. Specify all account numbers as the principal.
- C. Specify PrincipalOrgId as the principal.
- D. Specify '*' as the principal and PrincipalOrgId as a condition.

Answer: C

NEW QUESTION # 740
A company has an organization in AWS Organizations. The company uses shared VPCs to provide networking resources across accounts A SysOps administrator has been able to successfully launch and manage Amazon EC2 instances in a participant account However the SysOps administrator is now receiving an InstanceLimitExceeded error when the SysOps administrator tries to launch a new EC2 instance What should the SysOps administrator do to resolve this error')

- A. Launch additional EC2 instances by using a different Amazon Machine image (AMI)
- B. Request an instance quota increase from the parte pant account
- C. Request an instance quota increase from the account that owns the VPC
- D. Launch additional EC2 instances in a different AWS Region

Answer: B

Explanation:
When receiving an InstanceLimitExceeded error in a participant account of a shared VPC, you need to request an instance quota increase from the participant account.
Requesting a Quota Increase:
Open the AWS Service Quotas console in the participant account.
In the navigation pane, choose "AWS services" and select "Amazon EC2."
Select the quota you need to increase, such as "Running On-Demand Standard (A, C, D, H, I, M, R, T, Z) instances." Click

"Request quota increase" and specify the desired limit.
Quota Management in AWS Organizations:
While shared VPCs allow resources to be used across accounts, quota limits are still managed per account.
Each participant account must manage its own quotas independently.

Service Quotas
Requesting a Quota Increase

NEW QUESTION # 741
A company has an Amazon CloudFront distribution that uses an Amazon S3 bucket as its origin. During a review of the access logs, the company determines that some requests are going directly to the S3 bucket by using the website hosting endpoint. A SysOps administrator must secure the S3 bucket to allow requests only from CloudFront.
What should the SysOps administrator do to meet this requirement?

- A. Create an origin access identity (OAI) in CloudFront. Associate the OAI with the distribution. Update the S3 bucket policy to allow access only from the OAI. Create a new origin, and specify the S3 bucket as the new origin. Update the distribution behavior to use the new origin. Remove the existing origin.
- B. Create an origin access identity (OAI) in CloudFront. Associate the OAI with the distribution. Update the S3 bucket policy to allow access only from the OAI. Disable website hosting. Create a new origin, and specify the S3 bucket as the new origin. Update the distribution behavior to use the new origin. Remove the existing origin.
- C. Create an origin access identity (OAI) in CloudFront. Associate the OAI with the distribution. Remove access to and from other principals in the S3 bucket policy. Update the S3 bucket policy to allow access only from the OAI.
- D. Update the S3 bucket policy to allow access only from the CloudFront distribution. Remove access to and from other principals in the S3 bucket policy. Disable website hosting. Create a new origin, and specify the S3 bucket as the new origin. Update the distribution behavior to use the new origin. Remove the existing origin.

Answer: C

NEW QUESTION # 742
A SysOps administrator applies the following policy to an AWS CloudFormation stack:

```
{
    "Statement": [
        {
            "Effect": "Deny",
            "Action": "Update:*",
            "Principal": "*",
            "Resource": ["LogicalResourceId/Production*"]
        },
        {
            "Effect": "Allow",
            "Action": "Update:*",
            "Principal": "*",
            "Resource": "*"
        }
    ]
}
```

What is the result of this policy?

- A. Users in an IAM group with a logical ID that begins with "Production" are prevented from running the update-stack command.
- B. Users can update all resources in the stack except for resources that have an attribute that begins with

"Production".
- C. Users can update all resources in the stack except for resources that have a logical ID that begins with "Production".
- D. Users that assume an IAM role with a logical ID that begins with "Production" are prevented from running the update-stack command.

Answer: C

Explanation:
The policy provided includes two statements:
* The first statement explicitly denies the Update:* action on resources with a LogicalResourceId that begins with "Production".
* The second statement allows the Update:* action on all resources.
In AWS IAM policy evaluation logic, explicit denies always take precedence over allows. Therefore, the effect of this policy is that users can update all resources in the stack except for those with a logical ID that begins with "Production".
