AWS Certified Cloud Practitioner  
(CLF-C02) (Study Notes)

## AWS Certified Cloud Practitioner (CLF-C02) Study Notes

### Introduction

- Introduction
  - AWS Certified Cloud Practitioner is considered an entry-level certification, and it's going to focus on your understanding of cloud computing concepts
    - Benefits and drawbacks of cloud computing
    - Different types of cloud services
    - Financial and strategic implications of using cloud services
  - This certification is designed for professionals who are new to cloud computing and professionals seeking an understanding of cloud computing and all its related concepts
  - You will find that the first portion of this course is going to be focused on the big picture theory and concepts related to cloud computing
    - Cloud Computing Principles
    - Cloud Design Principles
    - Cloud Migrations
    - Global Infrastructure
    - Cloud Economics and Pricing
    - Connecting to AWS
  - AWS Certified Cloud Practitioner certification exam consists of 4 domains or knowledge areas
    - 24% of Cloud Concepts
    - 30% of Security and Compliance
    - 34% of Cloud Technology and Services
    - 12% of Billing, Pricing, and Support
  - AWS Certified Cloud Practitioner has a maximum 65 questions over the course of 90 minutes
    - Within the 65 questions, there will be 15 that AWS calls "unscored" questions
    - These unscored questions are new questions that Amazon is evaluating to see if they should be used as real questions in the future

## Amazon AWS Certified Cloud Practitioner Sample Questions (Q725-Q730):

### NEW QUESTION # 725

Which capabilities are in the platform perspective of the AWS Cloud Adoption Framework (AWS CAF)? (Select TWO.)

- A. Continuous integration and continuous delivery (CI/CD)
- B. Data engineering
- C. Performance and capacity management
- D. Change and release management
- E. Infrastructure protection

**Answer: A,B**

Explanation:

The platform perspective of the AWS Cloud Adoption Framework (AWS CAF) helps you build an enterprise- grade, scalable, hybrid cloud platform, modernize existing workloads, and implement new cloud-native solutions<sup>1</sup>. It comprises seven capabilities, two of which are data engineering and CI/CD<sup>1</sup>.

\* Data engineering: This capability helps you design and evolve a fit-for-purpose data and analytics architecture that can reduce complexity, cost, and technical debt while enabling you to gain actionable insights from exponentially growing data volumes<sup>1</sup>. It involves selecting key technologies for each of your architectural layers, such as ingestion, storage, catalog, processing, and consumption. It also involves supporting real-time data processing and adopting a Lake House architecture to facilitate data movements between data lakes and purpose-built data stores<sup>1</sup>.

\* CI/CD: This capability helps you automate the delivery of your cloud solutions using a set of practices and tools that enable faster and more reliable deployments<sup>1</sup>. It involves establishing a pipeline that can build, test, and deploy your code across multiple environments. It also involves adopting a DevOps culture that fosters collaboration, feedback, and continuous improvement among your development and operations teams<sup>1</sup>.

### NEW QUESTION # 726

A company wants a time-series database service that makes it easier to store and analyze trillions of events each day. Which AWS service will meet this requirement?

- A. Amazon DocumentDB (with MongoDB compatibility)

- B. Amazon Forecast
- C. Amazon Neptune
- **D. Amazon Timestream**

**Answer: D**

Explanation:

Amazon Timestream is a fast, scalable, and serverless time-series database service for IoT and other operational applications that makes it easy to store and analyze trillions of events per day up to 1,000 times faster and at as little as 1/10th the cost of relational databases<sup>1</sup>. Amazon Timestream saves you time and cost in managing the lifecycle of time series data, and its purpose-built query engine lets you access and analyze recent and historical data together with a single query<sup>1</sup>. Amazon Timestream has built-in time series analytics functions, helping you identify trends and patterns in near real time<sup>1</sup>.

The other options are not suitable for storing and analyzing trillions of events per day. Amazon Neptune is a graph database service that supports highly connected data sets. Amazon Forecast is a machine learning service that generates accurate forecasts based on historical data. Amazon DocumentDB (with MongoDB compatibility) is a document database service that supports MongoDB workloads.

### NEW QUESTION # 727

A company hosts its website on Amazon EC2 instances. The company needs to ensure that the website reaches a global audience and provides minimum latency to users.

Which AWS service should the company use to meet these requirements?

- A. Amazon CloudFront
- **B. Amazon Route 53**
- C. AWS Lambda
- D. Elastic Load Balancing

**Answer: B**

### NEW QUESTION # 728

What does the concept of agility mean in AWS Cloud computing? (Select TWO.)

- **A. The speed at which AWS resources are implemented**
- B. The speed at which AWS creates new AWS Regions
- C. The low cost of entry into cloud computing
- D. The elimination of wasted capacity
- **E. The ability to experiment quickly**

**Answer: A,E**

Explanation:

Explanation

Agility in AWS Cloud computing means the ability to rapidly provision and deprovision AWS resources as needed, and the ability to experiment quickly with new ideas and solutions. Agility helps businesses to respond to changing customer demands, market opportunities, and competitive threats, and to innovate faster and cheaper. Agility also reduces the risk of failure, as businesses can test and validate their assumptions before committing to large-scale deployments. Some of the benefits of agility in AWS Cloud computing are:

The speed at which AWS resources are implemented: AWS provides a variety of services and tools that allow you to create, configure, and launch AWS resources in minutes, using the AWS Management Console, the AWS Command Line Interface (AWS CLI), the AWS Software Development Kits (AWS SDKs), or the AWS CloudFormation templates. You can also use the AWS Cloud Development Kit (AWS CDK) to define your AWS resources as code using familiar programming languages, and synthesize them into AWS CloudFormation templates. You can also use the AWS Service Catalog to create and manage standardized portfolios of AWS resources that meet your organizational policies and best practices. AWS also offers on-demand, pay-as-you-go pricing models, so you only pay for the resources you use, and you can scale them up or down as your needs change<sup>12345</sup> The ability to experiment quickly: AWS enables you to experiment quickly with new ideas and solutions, without having to invest in upfront capital or long-term commitments. You can use AWS to create and test multiple prototypes, hypotheses, and minimum viable products (MVPs) in parallel, and measure their performance and feedback. You can also use AWS to leverage existing

services and solutions, such as AWS Marketplace, AWS Solutions, and AWS Quick Starts, that can help you accelerate your innovation process. AWS also supports a culture of experimentation and learning, by providing tools and resources for continuous integration and delivery (CI/CD), testing, monitoring, and analytics.

### NEW QUESTION # 729

Which AWS service or tool should a company use to forecast AWS spending?

- A. AWS Trusted Advisor
- **B. Cost Explorer**
- C. Amazon DevPay
- D. AWS Organizations

**Answer: B**

Explanation:

Cost Explorer is an AWS service or tool that can be used to forecast AWS spending. It allows users to analyze their AWS costs and usage using interactive graphs and tables. It also provides features such as filtering, grouping, and forecasting to help users plan their future spending. Amazon DevPay is an AWS service that allows developers to sell applications that are built on AWS services. It handles the billing and metering for the customers of the applications and collects payments from them. It is not a tool for forecasting AWS spending. AWS Organizations is an AWS service that allows users to centrally manage and govern their AWS accounts. It provides features such as creating groups of accounts, applying policies, and automating account creation. It is not a tool for forecasting AWS spending. AWS Trusted Advisor is an AWS service that provides best practices and recommendations to optimize the performance, security, and cost of AWS resources. It can help users identify opportunities to reduce their AWS costs, but it is not a tool for forecasting AWS spending.
