6V0-22.25 Reliable Test Online & Instant 6V0-22.25 Discount

Since VMware 6V0-22.25 Certification is so popular and our ValidDumps can not only do our best to help you pass the exam, but also will provide you with one year free update service, so to choose ValidDumps to help you achieve your dream. For tomorrow's success, is right to choose ValidDumps. Selecting ValidDumps, you will be an IT talent.

VMware Avi Load Balancer 30.x Administrator Sample Questions (Q24-Q29):

NEW QUESTION # 24

An administrator is configuring a Virtual Service for a web application that serves a large amount of static content (e.g., images, CSS files). To improve page load times and reduce the load on the web servers, the administrator wants the Avi Service Engines to store and serve this static content directly. Which two features in the Application Profile are required to configure this? (Choose 2.)

- A. A WAF Policy
- B. Connection Multiplexing
- C. A specific Cache-Control header value in the HTTP Response Policy.
- D. The Cacheable Mime Types list.
- E. Caching

Answer: D,E

NEW QUESTION # 25

An organization has enabled Avi's real-time analytics for all their production Virtual Services. To reduce storage consumption and improve query performance, they want to automatically discard logs for routine, successful (HTTP 200) health monitor checks, while keeping all logs for failed checks and actual user traffic. Which combination of settings is required to achieve this? (Select all that apply.)

- A. For the Health Monitor, disable the 'Log Successful Checks' option.
- B. For the Health Monitor, set the 'Health Monitor Type' to 'UDP'.
- C. In the Analytics Profile for the Virtual Service, disable logging for 'Non-Significant' traffic.
- D. In the Analytics Profile for the Virtual Service, enable 'Log all requests'.
- E. For the Health Monitor, ensure 'Is Federated' is unchecked.
- F. In the Analytics Profile for the Virtual Service, configure 'Non-Significant Log Throttling'.

Answer: A,F

NEW QUESTION # 26

A vSphere Administrator has configured a vCenter cloud in Avi, but the cloud status is red and shows the error "No valid templates found for Service Engine creation". The administrator has confirmed that the Avi Controller's service account has sufficient permissions in vCenter. What are the most likely reasons for this error? (Choose 2.)

- A. The Avi Controller has not been rebooted after the cloud configuration.
- B. The administrator did not upload the Service Engine OVA file to the vCenter Content Library.
- C. The vCenter cloud is configured in 'Read Access' mode.
- D. The administrator has not yet created a Service Engine Group.
- E. The administrator did not use the Avi UI to upload the Service Engine OVA to the Controller so it could be pushed to vCenter.

Answer: B,E

NEW QUESTION # 27

Which of the following events would generate a "Significant Log" by default in Avi Vantage?

Scenario Events:

1. A client successfully connects and receives an HTTP 200 OK response.
2. A backend server fails its health check and is marked DOWN.
3. A client request is blocked by a WAF SQL Injection rule.
4. A client connection times out due to a slow backend server response.

- A. All of the above
- B. Event 1 only
- C. Events 2, 3, and 4

- D. Events 3 and 4 only

Answer: C

NEW QUESTION # 28

An operator needs to configure a second Virtual Service that reuses an existing Virtual Service IP on a separate service port. How is this handled in the Create Virtual Service configuration?

- A. In the Advanced Setup Wizard, create the second Virtual Service without Auto Allocate, and then type in the existing VS IP
- B. In the Basic Setup Wizard, create the second Virtual Service without Auto Allocate, and then type in the existing VS IP
- **C. In the Advanced Setup Wizard, create the second Virtual Service and select an existing VS VIP**
- D. In the Advanced Setup Wizard, create the second Virtual Service as a Child Virtual Service

Answer: C

Explanation:

Avi Load Balancer supports sharing a single VIP across multiple Virtual Services when each Virtual Service uses a different service port. This is useful when multiple applications or protocols must use the same IP address but separate listener ports, profiles, pools, and policies. Broadcom documentation for sharing a single VIP across multiple Virtual Services describes selecting an existing VS VIP while creating another Virtual Service. This avoids manually typing the same IP address as a separate allocation, which could create duplicate or inconsistent VIP configuration. Creating a child Virtual Service is used for other use cases, such as SNI or parent-child designs, not simply reusing the same VIP on a different port. Therefore, the correct method is to use Advanced Setup and select the existing VS VIP.

NEW QUESTION # 29

.....

Now in this time so precious society, I suggest you to choose ValidDumps which will provide you with a short-term effective training, and then you can spend a small amount of time and money to pass your first time attend VMware Certification 6V0-22.25 Exam.
