P.S. Free 2026 Microsoft GH-900 dumps are available on Google Drive shared by VerifiedDumps: <https://drive.google.com/open?id=1VF-weBkYH1aqdU4gJ8RIMwDGz9cUMe1H>

More qualified certification for our future employment has the effect to be reckoned with, only to have enough qualification GH-900 certifications to prove their ability, can we get over rivals in the social competition. Many candidates be defeated by the difficulty of the GH-900 exam, but if you can know about our GH-900 Exam Materials, you will overcome the difficulty easily. If you want to buy our GH-900 exam questions please look at the features and the functions of our product on the web or try the free demo of our GH-900 exam questions.

Microsoft GH-900 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Modern Development: This domain assesses abilities of DevOps Engineers and Continuous Integration Specialists in implementing modern development practices. It emphasizes understanding DevOps principles and leveraging GitHub Actions for automation and CI • CD pipeline implementation. Candidates also learn GitHub’s tools and best practices for conducting and managing code reviews.
Topic 2	<ul style="list-style-type: none"> • Working with GitHub Repositories: This domain targets Repository Administrators and Content Managers, focusing on managing repository settings and permissions. Candidates learn to configure repositories, use templates, and effectively manage files by adding, editing, and deleting. The domain also addresses versioning of files and the use of GitHub Desktop for streamlined file management tasks within repositories.
Topic 3	<ul style="list-style-type: none"> • Project Management: This section is designed for Project Coordinators and Product Managers and focuses on using GitHub Projects for project management. Candidates learn to create and manage GitHub Projects, utilize project boards for organizing tasks, and integrate project workflows with issues and pull requests to maintain project visibility and progress.

GitHub Foundations exam questions & GH-900 torrent pdf & GitHub Foundations actual dumps

GH-900 training dumps are created in the most unique, customized way so it can cover different areas of exam with the Quality and Price of the product which is unmatched by our Competitors. The 100% guarantee pass pass rate of GH-900 training materials that guarantee you to pass your Exam and will not permit any type of failure. You will find every question and answer within GH-900 Training Materials that will ensure you get any high-quality certification you're aiming for.

Microsoft GitHub Foundations Sample Questions (Q109-Q114):

NEW QUESTION # 109

GitHub Actions workflows can be directly triggered by which of the following events?
(Each answer presents a complete solution. Choose three.)

- A. Committing a change to a local git repository
- B. Pushing to a GitHub repository
- C. Creating an Issue
- D. Creating a new repository
- E. Adding a comment to a discussion post
- F. Disabling a GitHub runner

Answer: B,C,E

Explanation:

GitHub Actions are automated workflows that can be triggered by various events on GitHub. Some common events that trigger workflows include pushes to a repository, creation of issues, and comments on discussion posts.

* Triggering GitHub Actions:

* Option D (Pushing to a GitHub repository) is correct because this is one of the most common triggers for CI/CD workflows.

* Option F (Creating an Issue) is correct because issues are commonly used as triggers for workflows, such as automatically assigning a label or notifying a team.

* Option A (Adding a comment to a discussion post) is correct because actions can be triggered by activity on discussion posts, including comments.

* Incorrect Options:

* Option B (Creating a new repository) is incorrect because this action typically does not trigger workflows within a specific repository.

* Option C (Committing a change to a local git repository) is incorrect because GitHub Actions are triggered by events on the GitHub platform, not by local commits.

* Option E (Disabling a GitHub runner) is incorrect because it is related to the environment where actions are executed, not a trigger for workflows.

NEW QUESTION # 110

For which of the following does GitHub provide hosted runners?

- A. Linux, Windows, and macOS
- B. AWS, Azure, and GCP
- C. Docker
- D. Kubernetes

Answer: A

Explanation:

GitHub provides runners that you can use to run your jobs, or you can host your own runners.

Each GitHub-hosted runner is a new virtual machine (VM) hosted by GitHub with the runner application and other tools preinstalled, and is available with Ubuntu Linux, Windows, or macOS operating systems. When you use a GitHub-hosted runner, machine maintenance and upgrades are taken care of for you.

Reference:

<https://docs.github.com/en/actions/concepts/runners/github-hosted-runners>

NEW QUESTION # 111

As a user, which of the following default labels is used to indicate that a maintainer needs assistance on an issue or pull request?

- A. Help wanted
- B. Documentation
- C. Question
- D. Enhancement

Answer: A

Explanation:

In GitHub, labels are used to categorize issues and pull requests, and certain default labels are provided to help manage tasks:

Help Wanted Label:

Option C is correct. The "Help wanted" label is used to indicate that the maintainer of the repository needs assistance on a particular issue or pull request. This label helps in attracting contributors who might be interested in helping with specific tasks.

NEW QUESTION # 112

Your team uses GitHub to track both development progress and issue resolution. You are working on a bug fix and have created a pull request for it. Your tech lead reminds you to link the PR to the corresponding issue so it's automatically closed once the PR is merged. Which TWO valid methods can you use to link a pull request to an issue? (Choose two.)

- A. Mention the issue number in the PR title (e.g., Bug fix for #45)
- B. Tag the issue with a linked label in the issue discussion
- C. Navigate to the "Development" section of the PR and manually link the issue from a dropdown
- D. Use a keyword like fixes #45 or resolves #45 in the PR description or comment

Answer: C,D

Explanation:

To ensure the pull request automatically closes the related issue upon merging, you can use a keyword like "fixes #45" or "resolves #45" in the PR description or comment, or manually link the issue through the "Development" section of the pull request. These methods properly associate the issue with the PR, making tracking and resolution seamless.

Option B is CORRECT because using supported keywords like fixes, closes, or resolves, followed by the issue number in the PR description or comments, will automatically close the issue when the PR is merged.

Option C is CORRECT because GitHub allows you to manually link up to ten issues by going to the pull request's "Development" section and selecting the issues to associate.

NEW QUESTION # 113

What is the difference between an organization member and an outside collaborator?

- A. Outside collaborators do not consume paid licenses.
- B. Organization base permissions do not apply to outside collaborators.
- C. Outside collaborators cannot be given the admin role on a repository.
- D. Two-factor authentication (2FA) is not required for outside collaborators.

Answer: B

Explanation:

In GitHub, an organization member is a user who has been added to an organization and is subject to the organization's base permissions and policies. An outside collaborator is a user who is not a member of the organization but has been granted access to one or more repositories within the organization.

Organization Members:

Members are subject to the organization's base permissions, which apply across all repositories within the organization. These permissions might include read, write, or admin access, depending on what has been set as the default.

Members consume paid licenses if the organization is on a paid plan.

Members are required to have two-factor authentication (2FA) if the organization enforces it.

Outside Collaborators:

Outside collaborators do not have organization-wide permissions. They only have access to specific repositories to which they have been granted permission. This means organization base permissions do not apply to them (making option A correct).

Outside collaborators do not consume paid licenses. They are only counted toward the license if they are made organization members.

Outside collaborators can be granted any level of permission, including the admin role on specific repositories.

Two-factor authentication (2FA) can be enforced for outside collaborators at the repository level, depending on the organization's security settings.

Given this information, option A is the correct answer: "Organization base permissions do not apply to outside collaborators."

NEW QUESTION # 114

.....

The Microsoft GH-900 exam offers a great opportunity for beginner and experienced to validate their expertise in a short time period. To do this they just need to pass the GitHub Foundations GH-900 Certification Exam which is not an easy task. And VerifiedDumps offers latest GH-900 exam practice, exam pattern and practice exam online.
