For more information related to IAPP certification track [IAPP-certification-path](#)

IAPP Certified Information Privacy Technologist (CIPT) Sample Questions (Q109-Q114):

NEW QUESTION # 109

All of the following topics should be included in a workplace surveillance policy EXCEPT?

- A. Who can access surveillance data.
- B. What areas can be placed under surveillance.
- C. Who can be tracked and when.
- D. Who benefits from collecting surveillance data.

Answer: D

Explanation:

A workplace surveillance policy should outline critical aspects such as who can be tracked and when, who can access the surveillance data, and what areas can be placed under surveillance. However, detailing who benefits from collecting the surveillance data is not typically included as it may not directly relate to privacy and security policies but rather to internal policy discussions.

NEW QUESTION # 110

SCENARIO

WebTracker Limited is a cloud-based online marketing service located in London. Last year, WebTracker migrated its IT infrastructure to the cloud provider Azure, which provides SQL Databases and Artificial Intelligence services to WebTracker. The roles and responsibilities between the two companies have been formalized in a standard contract, which includes allocating the role of data controller to WebTracker.

The CEO of WebTracker, Mr. Bond, would like to assess the effectiveness of Azure's privacy controls, and he recently decided to hire you as an independent auditor. The scope of the engagement is limited only to the marketing services provided by WebTracker, you will not be evaluating any internal data processing activity, such as HR or Payroll.

This ad-hoc audit was triggered due to a future partnership between WebTracker and SmartHome - a partnership that will not require any data sharing. SmartHome is based in the USA, and most recently has dedicated substantial resources to developing smart refrigerators that can suggest the recommended daily calorie intake based on DNA information. This and other personal data is collected by WebTracker.

To get an idea of the scope of work involved, you have decided to start reviewing the company's documentation and interviewing key staff to understand potential privacy risks.

The results of this initial work include the following notes:

- * There are several typos in the current privacy notice of WebTracker, and you were not able to find the privacy notice for SmartHome.
- * You were unable to identify all the sub-processors working for SmartHome. No subcontractor is indicated in the cloud agreement with Azure, which is responsible for the support and maintenance of the cloud infrastructure.
- * There are data flows representing personal data being collected from the internal employees of WebTracker, including an interface from the HR system.
- * Part of the DNA data collected by WebTracker was from employees, as this was a prototype approved by the CEO of WebTracker.
- * All the WebTracker and SmartHome customers are based in USA and Canada.

Which of the following issues is most likely to require an investigation by the Chief Privacy Officer (CPO) of WebTracker?

- A. Azure sends newsletter to WebTracker customers, as approved by the Marketing Manager.
- B. Employees' personal data are being stored in a cloud HR system, as approved by the HR Manager.
- C. File Integrity Monitoring is being deployed in SQL servers, as indicated by the IT Architect Manager.
- D. Data flows use encryption for data at rest, as defined by the IT manager.

Answer: A

NEW QUESTION # 111

SCENARIO

You have just been hired by Ancillary.com, a seller of accessories for everything under the sun, including waterproof stickers for pool floats and decorative bands and cases for sunglasses. The company sells cell phone cases, e-cigarette cases, wine spouts, hanging air fresheners for homes and automobiles, book ends, kitchen implements, visors and shields for computer screens, passport holders, gardening tools and lawn ornaments, and catalogs full of health and beauty products. The list seems endless. As the CEO likes to say, Ancillary offers, without doubt, the widest assortment of low-price consumer products from a single company anywhere.

Ancillary's operations are similarly diverse. The company originated with a team of sales consultants selling home and beauty products at small parties in the homes of customers, and this base business is still thriving.

However, the company now sells online through retail sites designated for industries and demographics, sites such as "My Cool Ride" for automobile-related products or "Zoomer" for gear aimed toward young adults.

The company organization includes a plethora of divisions, units and outrigger operations, as Ancillary has been built along a decentered model rewarding individual initiative and flexibility, while also acquiring key assets. The retail sites seem to all function differently, and you wonder about their compliance with regulations and industry standards. Providing tech support to these sites is also a challenge, partly due to a variety of logins and authentication protocols.

You have been asked to lead three important new projects at Ancillary:

The first is the personal data management and security component of a multi-faceted initiative to unify the company's culture. For this project, you are considering using a series of third-party servers to provide company data and approved applications to employees. The second project involves providing point of sale technology for the home sales force, allowing them to move beyond paper checks and manual credit card imprinting.

Finally, you are charged with developing privacy protections for a single web store housing all the company's product lines as well as products from affiliates. This new omnibus site will be known, aptly, as "Under the Sun." The Director of Marketing wants the site not only to sell Ancillary's products, but to link to additional products from other retailers through paid advertisements. You need to brief the executive team of security concerns posed by this approach.

Which should be used to allow the home sales force to accept payments using smartphones?

- A. Field transfer protocol.
- B. Cross-current translation.
- C. Radio Frequency Identification
- **D. Near-field communication**

Answer: D

NEW QUESTION # 112

A credit card with the last few numbers visible is an example of what?

- A. Synthetic data
- **B. Masking data**
- C. Partial encryption
- D. Sighting controls.

Answer: B

Explanation:

Masking data involves obscuring certain parts of data to protect sensitive information while allowing some level of visibility. In the case of a credit card, masking typically involves showing only the last few digits while hiding the rest, which is a common practice to protect the full card number from unauthorized access.

This method helps in balancing the need for data utility with the requirement for data protection.

NEW QUESTION # 113

Which Organization for Economic Co-operation and Development (OECD) privacy protection principle encourages an organization to obtain an individual's consent before transferring personal information?

- A. Purpose specification.
- B. Individual participation.
- **C. Collection limitation.**
- D. Accountability.

Answer: C

NEW QUESTION # 114

.....
