| Topic 4 | <ul style="list-style-type: none">• Group Creation: This domain covers assigning endpoints to appropriate groups for policy application and following best practices for managing host group structures. |
| Topic 5 | <ul style="list-style-type: none">• Rules Configuration: This domain involves creating custom IOA rules, configuring exclusions to resolve false positives, managing IOC settings for threat detection, and configuring CID-wide General Settings. |
| Topic 6 | <ul style="list-style-type: none">• User Management: This domain covers determining appropriate roles for console access, creating and assigning roles with specific permissions, and managing API keys for platform access. |
| Topic 7 | <ul style="list-style-type: none">• Sensor Deployment: This domain focuses on verifying installation prerequisites, applying default policies and best practices, uninstalling sensors, and troubleshooting sensor issues across supported operating systems. |

CrowdStrike CCFA-200b Questions [2026] Effectively Get Ready With Real CCFA-200b Dumps

Selecting shortcut and using technique are to get better success. If you want to get security that you can pass CrowdStrike CCFA-200b certification exam at the first attempt, Braindumpsqa CrowdStrike CCFA-200b exam dumps is your unique and best choice. It is the dumps that you can't help praising it. There are no better dumps at the moment. The dumps can let you better accurate understanding questions point of CCFA-200b Exam so that you can learn purposefully the relevant knowledge. In addition, if you have no time to prepare for your exam, you just remember the questions and the answers in the dumps. The dumps contain all questions that can appear in the real exam, so only in this way, can you pass your exam with no ease.

CrowdStrike Falcon Administrator Sample Questions (Q16-Q21):

NEW QUESTION # 16

What log would you use to investigate unusual activity involved with a script interfacing with the Falcon platform?

- A. RTR session audit
- B. Falcon UI audit
- C. Prevention policy debug
- **D. API audit**

Answer: D

NEW QUESTION # 17

When creating a custom IOA for a specific domain, which syntax would be best for detecting or preventing on all subdomains as well?

- **A. *\.baddomain\.xyz|baddomain\. xyz**
- B. *baddomain\. xyz|baddomain\. xyz *
- C. Custom IOA rules cannot be created for domains
- D. **baddomain\. xyz|baddomain\. xyz**

Answer: A

Explanation:

The syntax that would be best for detecting or preventing on all subdomains as well is

*.baddomain.xyz|baddomain. xyz. This syntax will match any domain that ends with .baddomain.xyz or is exactly baddomain.xyz. The * wildcard will match any characters before the dot, and the | operator will match either side of the expression. This syntax can be used in a Custom IOC or a Custom IOA rule to detect or prevent network connections to malicious domains.

NEW QUESTION # 18

The Falcon Administrator has created a new prevention policy to apply to the "Servers" group; however, when applying the new prevention policy this group is not appearing in the list of available groups. What is the most likely issue?

- A. The "Servers" group must be disabled first
- B. The new prevention policy should be enabled first
- **C. The "Servers" group already has a policy applied to it**
- D. Host type was not defined correctly within the prevention policy

Answer: C

Explanation:

The most likely issue for not being able to apply a new prevention policy to the "Servers" group is that the "Servers" group already has a policy applied to it. A prevention policy is a policy that defines the prevention capabilities and settings for the Falcon sensor on a host. You can create and assign custom prevention policies to different hosts or groups in your environment. However, you can only assign one prevention policy per host or group at a time. If a host or group already has a prevention policy applied to it, you cannot apply another prevention policy to it unless you remove or replace the existing one.

NEW QUESTION # 19

In order to exercise manual control over the sensor upgrade process, as well as prevent unauthorized users from uninstalling or upgrading the sensor, which settings in the Sensor Update Policy would meet this criteria?

- A. Sensor version set to N-1 and Bulk maintenance mode is turned on
- **B. Sensor version fixed and Uninstall and maintenance protection turned on**
- C. Sensor version updates off and Uninstall and maintenance protection turned off
- D. Sensor version set to N-2 and Bulk maintenance mode is turned on

Answer: B

Explanation:

In order to exercise manual control over the sensor upgrade process, as well as prevent unauthorized users from uninstalling or upgrading the sensor, the administrator should set the Sensor version to fixed and turn on the Uninstall and maintenance protection setting in the Sensor Update Policy. This will allow the administrator to specify which sensor version will be used by the hosts using this policy, and also require a maintenance token to uninstall or upgrade the sensor. The other options are either incorrect or not sufficient to meet this criteria.

NEW QUESTION # 20

You need to be aware of which policies are the most used as new hosts are being added to your CID. Where could you easily find a review of the top ten sensor update, prevention, and device control policies?

- A. Sensor Subscription licenses
- **B. Sensor Policy Daily report**
- C. Executive Summary
- D. Managed Assets dashboard

Answer: B

NEW QUESTION # 21

.....

More and more people look forward to getting the CrowdStrike certification by taking an exam. However, the exam is very difficult for a lot of people. Especially if you do not choose the correct study materials and find a suitable way, it will be more difficult for you to pass the CCFA-200b exam and get the related certification.
