CompTIA Cloud+ (2025) Sample Questions (Q20-Q25):

NEW QUESTION # 20

Which of the following types of storage provides the greatest performance advantage for a traditional relational database?

- A. Block
- B. File
- C. Object
- D. Ephemeral

Answer: A

Explanation:

Block storage provides the greatest performance advantage for traditional relational databases due to its high performance and low-latency characteristics. Block storage allows databases to rapidly manage data in fixed- sized blocks, which is ideal for databases that require frequent read/write operations.

Understanding different storage types and their use cases, including block storage for databases, is part of the cloud computing knowledge base covered in CompTIA Cloud+.

NEW QUESTION # 21

Which of the following provides secure, private communication between cloud environments without provisioning additional hardware or appliances?

- A. VPN
- B. BGP
- C. Transit gateway
- D. VPC peering

Answer: D

Explanation:

VPC peering provides secure, private communication between cloud environments without the need for provisioning additional hardware or appliances. It allows direct network connectivity between two Virtual Private Clouds (VPCs), enabling resources in either VPC to communicate with each other using private IP addresses.

NEW QUESTION # 22

The performance of an e-commerce website decreases dramatically during random periods. The IT team is evaluating available resources to mitigate the situation. Which of the following is the best approach to effectively manage this scenario?

- A. Migrating to a dedicated host
- B. Configuring automatic elasticity
- C. Scheduling resource allocation
- D. Purchasing additional servers

Answer: B

Explanation:

Configuring automatic elasticity is the best approach to manage an e-commerce website that experiences random performance drops due to variable traffic. Automatic elasticity enables the cloud resources to scale up or down automatically based on the current load, ensuring consistent performance even during unexpected traffic surges.

NEW QUESTION # 23

A developer is sending requests to a SaaS application. The developer becomes unable to send more requests after sending a number of them, but other developers can still send requests. Which of the following is most likely causing the issue?

- A. Rate limiting
- B. Partial outage
- C. Service quota
- D. API throttling

Answer: A

Explanation:

- * A. Partial outage: Would affect multiple developers, not just one.
- * B. API throttling: Temporarily limits requests but doesn't block them entirely.
- * C. Rate limiting: Prevents excessive requests from a single user or system, explaining why the developer was blocked after reaching a certain threshold.
- * D. Service quota: Typically applies to overall service usage rather than individual user requests.

Reference: CompTIA Cloud+ CV0-004 Study Guide, Objective 2.6: Optimize resource usage and application access controls.

NEW QUESTION # 24

Which of the following is part of software change control?

- A. Validation checks
- B. Requirements definition
- C. Maintenance windows
- D. **Rollback plans**

Answer: D

Explanation:

A key element of change control is having a rollback plan, which allows recovery to a previous stable state if the change causes instability. This is part of operational support to maintain service availability and minimize downtime during updates.
