Whether the qualities and functions or the service of our OGBA-101 Exam Questions, are leading and we boost the most professional expert team domestically.

The Open Group TOGAF Business Architecture Foundation Exam Sample Questions (Q99-Q104):

NEW QUESTION # 99

Which of the following is the element of a value stream stage that describes the end state condition denoting the completion of the value stream stage?

- A. End point
- B. Target state
- C. Exit criteria
- D. Completion stage

Answer: C

Explanation:

In TOGAF's Business Architecture, a value stream stage is a high-level representation of a sequence of activities that create value for an organization. The end state condition denoting the completion of a value stream stage is known as the "Exit Criteria." This term is used to specify the conditions that must be met for the stage to be considered complete, ensuring that the output meets the required quality and performance standards before progressing to the next stage. The concept of "Exit Criteria" is essential to ensure that each stage of the value stream adds the expected value and aligns with the overall business objectives.

NEW QUESTION # 100

Which of the following is guidance for creating value streams?

- A. Include operational levels of detail.
- B. Start with customer-based value streams.
- C. Create an initial set of value streams that map one-to-one to existing capabilities.
- D. Identify the top-level value streams from components of capabilities.

Answer: B

Explanation:

When creating value streams, it is recommended to start with customer-based value streams. Here's a detailed explanation:

Value Streams:

Definition: Value streams represent the end-to-end activities that create value for customers or stakeholders. They provide a high-level view of how value is delivered within the organization.

Starting with Customer-Based Value Streams:

Customer Focus: Starting with customer-based value streams ensures that the architecture is aligned with the needs and expectations of the customers. This approach helps in identifying the most critical value-creating activities and aligning them with business goals.

Value Delivery: Customer-based value streams provide a clear understanding of how value is delivered from the customer's perspective. This helps in designing processes and capabilities that enhance customer satisfaction and business performance.

TOGAF Reference:

Phase B: Business Architecture: In this phase, value streams are identified and modeled to ensure that the architecture supports the delivery of value to customers. Starting with customer-based value streams is a key activity in this phase.

Capability-Based Planning: TOGAF emphasizes the importance of aligning business capabilities with value streams to ensure that the architecture supports value creation and delivery.

Benefits:

Customer-Centric Design: Starting with customer-based value streams ensures that the architecture is designed with a focus on

customer needs and value delivery.

Strategic Alignment: Aligning value streams with customer needs helps in ensuring that the architecture supports the strategic goals of the organization and enhances customer satisfaction.

In summary, when creating value streams, starting with customer-based value streams ensures a customer-centric design, aligning the architecture with the needs and expectations of the customers and supporting strategic goals.

NEW QUESTION # 101

Which ADM phase focuses on defining the problem to be solved, identifying the stakeholders, their concerns, and requirements?

- A. Phase B
- **B. Phase A**
- C. Phase C
- D. Preliminary Phase

Answer: B

Explanation:

Phase A of the TOGAF ADM (Architecture Development Method), also known as the Architecture Vision phase, focuses on defining the problem to be solved, identifying stakeholders, their concerns, and requirements. Here's a detailed explanation:

Phase A: Architecture Vision:

Objective: The primary objective of Phase A is to establish a high-level vision of the architecture project, including defining the scope and identifying key stakeholders and their concerns.

Problem Definition: This phase involves clearly defining the business problem or opportunity that the architecture project seeks to address. This sets the stage for all subsequent architecture work.

Stakeholder Identification:

Identification and Analysis: Stakeholders are identified and their concerns and requirements are gathered.

This includes business leaders, IT leaders, end-users, and other relevant parties.

Understanding Needs: Understanding the needs and expectations of stakeholders is crucial for ensuring that the architecture aligns with business objectives and addresses key concerns.

Requirements Gathering:

High-Level Requirements: In Phase A, high-level requirements are identified and documented. These requirements guide the development of the architecture vision and provide a basis for more detailed requirements in later phases.

Requirements Management: A requirements management process is established to ensure that stakeholder needs are continuously captured, analyzed, and addressed throughout the architecture development process.

TOGAF References:

Deliverables: Key deliverables of Phase A include the Architecture Vision document, stakeholder map, and high-level requirements.

ADM Guidelines: TOGAF provides guidelines and techniques for conducting Phase A, including methods for stakeholder analysis, problem definition, and developing the architecture vision.

In summary, Phase A of the TOGAF ADM focuses on defining the problem to be solved, identifying stakeholders, understanding their concerns and requirements, and developing a high-level architecture vision that aligns with business objectives.

NEW QUESTION # 102

Which of the following supports the need to govern Enterprise Architecture?

- **A. Best practice governance enables the organization to control value realization.**
- B. The TOGAF standard cannot be used without executive governance.
- C. The stakeholder preferences may go beyond the architecture project scope and needs control.
- D. The Architecture Project mandates the governance of the target architecture.

Answer: A

Explanation:

One of the reasons that supports the need to govern Enterprise Architecture is that best practice governance enables the organization to control value realization⁶. Value realization is the process of ensuring that the expected benefits from implementing an Enterprise Architecture are achieved and sustained over time⁶. Best practice governance provides a framework and mechanisms for monitoring and evaluating the performance and outcomes of Enterprise Architecture initiatives, as well as ensuring alignment with strategic objectives and stakeholder expectations.

NEW QUESTION # 103

What can be introduced to formalize a joint agreement between development partners and sponsors on the deliverables, quality, and fitness-for-purpose of an architecture?

- A. Non-disclosure Agreement
- B. The Statement of Architecture Work
- C. Architecture Contracts
- D. Service Level Agreements

Answer: A

NEW QUESTION # 104
