Oracle 1Z0-1072-25 Exam Syllabus Topics:

Topic	Details
Topic 1	• Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.
Topic 2	• Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPN • FastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.
Topic 3	• Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources

Topic 4	- Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block - File - Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.

Oracle Cloud Infrastructure 2025 Architect Associate Sample Questions (Q45-Q50):

NEW QUESTION # 45
Which statement accurately describes ephemeral principals?

- A. Ephemeral principals are temporary credentials granted to resources.
- B. Ephemeral principals are another term for dynamic groups.
- C. Ephemeral principals are user accounts with limited lifespans.
- D. Ephemeral principals represent long-lived service accounts.

Answer: A

Explanation:
Ephemeral principals in Oracle Cloud Infrastructure (OCI) refer to temporary security credentials granted to resources, such as compute instances, to enable them to interact with OCI services securely. These credentials have a limited lifespan and are typically used in situations where resources need to authenticate temporarily without the need for long-lived credentials.
Use Case: Ephemeral principals are often used for instance principals, allowing compute instances to make API calls without the need to manage long-term keys or credentials.

NEW QUESTION # 46
You can attach resources to a Dynamic Routing Gateway (DRG). Select THREE of these resources.

- A. Virtual Circuits
- B. Local Peering Connection
- C. VNIC
- D. IPSec Tunnel
- E. Remote Peering Connections
- F. Subnet

Answer: A,D,E

Explanation:
A Dynamic Routing Gateway (DRG) in Oracle Cloud Infrastructure (OCI) is a virtual router that provides a path for private traffic between your on-premises network and your VCN, or between your VCN and other VCNs. The resources that can be attached to a DRG include:

A . Virtual Circuits: Used to establish a private connection between your on-premises data center and your VCN via Oracle's FastConnect service.

D . Remote Peering Connections: Enables peering between VCNs located in different regions (Remote VCN Peering).

E . IPSec Tunnel: Facilitates secure VPN connections between your on-premises network and your OCI VCN.

NEW QUESTION # 47

Which OCI feature should be used to ensure that communication between database servers and OCI Object Storage is secure?

- A. Use a VPN Gateway
- B. Use a Local Peering Gateway
- C. Use a Service Gateway
- D. Use a NAT Gateway

Answer: C

Explanation:

To ensure secure communication between database servers and OCI Object Storage, you should use a Service Gateway. A Service Gateway enables instances in your VCN to privately access OCI services like Object Storage without traversing the public internet.

Security: The traffic between your database servers and Object Storage remains within the Oracle network, providing a secure and high-performance connection.

NEW QUESTION # 48

Which TWO statements are true about performing a multipart upload using the Multipart Upload API?

- A. Each part can be as large as 50 GIB.
- B. You do not need to split the object into parts.
- C. You do not have to commit the upload after uploading all parts.
- D. You can keep adding parts as long as the total number is less than 10,000.

Answer: A,D

Explanation:

When performing a multipart upload using the Multipart Upload API in Oracle Cloud Infrastructure (OCI) Object Storage, the following points are true:

C . Each part can be as large as 50 GiB: OCI allows each part of a multipart upload to be up to 50 GiB in size. This enables the efficient uploading of large objects in smaller, manageable parts.

D . You can keep adding parts as long as the total number is less than 10,000: The Multipart Upload API supports up to 10,000 parts for a single object. This allows the upload of very large objects by dividing them into multiple parts.

Incorrect Statements:

A . After uploading all parts, you must commit the upload to finalize the multipart upload and combine all parts into a single object.

B . The object must be split into parts before uploading when using the Multipart Upload API.

NEW QUESTION # 49

You want to protect your VM instance from low-level threats, such as rootkits and bootkits. What should you do?

- A. Use Vulnerability Scanning Service.
- B. Create a shielded instance.
- C. Use in-transit encryption.
- D. Create a burstable instance.

Answer: B

Explanation:

To protect your VM instance from low-level threats, such as rootkits and bootkits, you should create a shielded instance in Oracle Cloud Infrastructure (OCI). Shielded instances are designed to provide enhanced security features, including:

Secure Boot: Ensures that the instance boots only with trusted software.

Measured Boot: Records boot metrics, allowing verification that the instance has not been tampered with.

Trusted Platform Module (TPM): Provides additional security through cryptographic functions.

These features help protect against low-level threats that could compromise the integrity of the instance at boot time.
