Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q32-Q37):

NEW QUESTION # 32
What is a requirement when you deploy a FortiGate active-active cluster in Azure?

- A. You must configure all FortiGate VMs with three or more interfaces.
- B. You must configure both load balancers to allow administrative access.
- C. You must use unicast FGCP to synchronize the configurations.
- D. You must assign the public IP address to an Azure load balancer.

Answer: D

Explanation:
In an active-active FortiGate cluster deployment in Azure, you must assign the public IP address to an Azure load balancer. This is required because Azure does not support multiple VMs sharing a single public IP directly. The Azure Load Balancer handles inbound traffic and distributes it to the active FortiGate instances.

NEW QUESTION # 33
What are two characteristics of Azure standard public IP addresses? (Choose two.)

- A. They can be used with load balancers of any SKU
- B. They support the use of availability zones
- C. They require the configuration of NSGs for inbound traffic
- D. They can be dynamic or static

Answer: B,D

Explanation:
They support the use of availability zones - Standard public IP addresses are zone-redundant and support availability zone deployments for high availability.
They can be dynamic or static - Azure standard public IPs can be configured as static or dynamic, offering flexibility based on deployment needs.

- D. Data lifecycle management

Answer: C

NEW QUESTION # 36

What is a key distinction between Azure Firewall and FortiGate VM in terms of their primary functions?

- A. Azure Firewall is a cloud-native network security service, while FortiGate VM is a network virtual appliance (NVA) that provides comprehensive security functions.
- B. Azure Firewall focuses on network traffic inspection, while FortiGate VM is primarily a web application firewall.
- C. Azure Firewall is designed exclusively for application layer filtering, while FortiGate VM is suitable for both on-premises and cloud environments.
- D. Azure Firewall and FortiGate VM have identical primary functions, and no features differentiation.

Answer: A

Explanation:
Azure Firewall is a cloud-native, fully managed network security service designed to control and log network traffic using Azure policies. In contrast, the FortiGate VM is a network virtual appliance (NVA) that delivers comprehensive security features, including firewalling, IPS, antivirus, VPN, and application control, suitable for both on-premises and cloud deployments.
