CompTIA A+ Certification Exam: Core 1 220-1101 Prüfungsfragen mit Lösungen (Q572-Q577):

572. Frage

Several storms cause mission-critical servers to go offline unexpectedly. A server also goes offline suddenly due to hardware failure. Upon assessment, the company purchases new UPSs to condition power and allow the OSs to shut down gracefully in the event of a power failure. However, the UPSs are delayed due to supply chain issues. Which of the following can balance a cost-effective solution with uptime requirements?

- A. Increasing input voltage
- **B. Installing redundant PSUs**
- C. Activating a hot site
- D. Purchasing backup generators

Antwort: B

Begründung:

* C. Installing redundant PSUs (Power Supply Units):

* Redundant PSUs provide fault tolerance by ensuring that if one power supply fails, another will take over seamlessly.

* This is a cost-effective way to increase uptime while waiting for the UPSs to arrive.

Incorrect Options:

* A. Purchasing backup generators: Generators are costly and are typically used for long-term outages, not as an immediate or cost-effective solution.

* B. Increasing input voltage: This is not a practical solution to hardware failures or power issues.

* D. Activating a hot site: A hot site is an expensive, fully operational backup facility that would not be a cost-effective solution for this scenario.

- **A. Domain Name System**
- B. Gateway
- C. Subnet
- D. IP address

Antwort: A

575. Frage

A customer wants to archive a large number of photos and does not plan to retrieve them often. The customer wants a storage option that is the least expensive per gigabyte. Which of the following should the technician suggest?

- A. 15,000rpm SAS
- B. SCSI RAID
- C. NVMe SSD
- D. 5,400rpm HOD

Antwort: D

Begründung:

The correct answer is D. 5,400rpm HDD.

A 5,400rpm HDD (Hard Disk Drive) is a type of storage device that uses spinning magnetic disks to store data. A 5,400rpm HDD is the least expensive per gigabyte among the options given, as it has a lower rotational speed and performance than other types of HDDs or SSDs (Solid State Drives). A 5,400rpm HDD is suitable for archiving a large number of photos that are not accessed frequently, as it can offer high capacity and reliability at a low cost.

the average cost per gigabyte of a 5,400rpm HDD is around \$0.02 to \$0.0312, while the average cost per gigabyte of the other options are:

NVMe SSD: \$0.10 to \$0.1534

SCSI RAID: \$0.20 to \$0.305

15,000rpm SAS: \$0.30 to \$0.40

Therefore, a 5,400rpm HDD is the cheapest option among the four.
