

# 100% Pass Quiz Professional Development-Lifecycle-and-Deployment-Architect - Salesforce Certified Development Lifecycle and Deployment Architect Practice Tests

## Certified Development Lifecycle and Deployment Architect SU22 questions and answers 100% passed 2024

Universal Containers has started building a customer Lightning community that contains a few dozen Aura components. The development team lead has come to the Salesforce architect about questions regarding testing the Lightning components. What two knowledge points can the architect pass to the development team lead? Choose 2 answers

- A. There is a \$T test helper object that can be used to create the instance of the Lightning component, and it is promise enabled.
- B. The testing of the JavaScript part of the Aura component can be tested in the Jest framework and the Apex controllers can be tested using test classes.
- C. Install the Lightning test service AppExchange package to enable the Aura component testing.
- D. The testing can be viewed in the lightning.force.com/c/jasminetests.app URL. The page loads and runs Jasmine test and writes pass/fail information to the screen. CORRECT ANSWER ANSWER: BC - CHECKED

What are three advantages of using the SFDX? Choose 3 answers

- A. Can store code on a local machine, or a version control system.
- B. Can use native Deployment Rollback Tool to quickly revert to prior state.
- C. Can quickly deploy metadata using Execute Anonymous
- D. Can install application metadata from a central repository E. Can create scratch orgs. CORRECT ANSWER ANSWER: ADE

Universal Containers (UC) Customer Community is scheduled to go live in the Europe, Middle East, and Africa (EMEA) region in 3 months. UC follows a typical centralized governance model. Two weeks ago, the project stakeholders informed the project team about the recent changes in mandatory compliance Requirements needed to go live. The project team analyzed the requirements and have estimated

Since the Exam4Docs software tracks your progress, you can know mistakes and overcome them before the Salesforce Development-Lifecycle-and-Deployment-Architect final test.

### **Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q167-Q172):**

#### **NEW QUESTION # 167**

Universal Containers has asked the salesforce architect to establish a governance framework to manage all of those Salesforce initiatives within the company. What is the first step the Architect should take?

- **A. Identify relevant Stakeholders from within Universal Containers to obtain governance goals and objectives**
- B. Establish a global Center of Excellence to define and manage Salesforce development standards across the organization
- C. Implement a project management tool to manage all change requests on the project
- D. Implement a comprehensive DevOps framework for all initiatives within Universal Containers

**Answer: A**

Explanation:

Explanation

The first step in establishing a governance framework is to identify the relevant stakeholders from within the organization to obtain their goals and objectives. This will help to define the scope, roles, responsibilities, and processes for managing the Salesforce initiatives. The other options are possible steps to take later, but not the first one.

#### **NEW QUESTION # 168**

Universal Containers have just acquired Planetary storage. Both companies use salesforce.com to manage their sales activities. The two companies have many customers in common and the company plans to merge the two sales organizations, but the products and sales processes between the two original companies will remain different and distinct. What factor should the company consider in merging the two Salesforce.com orgs into a single org?

- A. Business processes on standard objects can be merged without modifications
- B. Salespersons selling both product lines would need two logins, once for each product line
- C. Transactional sales data could be combined without modification since standard objects are used
- **D. Customer data could be merged with modifications using standardization and de -duplication**

**Answer: D**

Explanation:

The most challenging factor to consider in merging the two Salesforce.com orgs into a single org is the customer data, as it may contain duplicates, inconsistencies, and conflicts. Option D suggests using standardization and de-duplication tools to merge the customer data, which is a reasonable approach. Option A is not true, as transactional sales data may have different formats, fields, and values in the two orgs. Option B is not necessary, as salespersons selling both product lines can use a single login in the merged org. Option C is not true, as business processes on standard objects may have different workflows, validation rules, and triggers in the two orgs.

### NEW QUESTION # 169

Universal Containers (UC) has four different business units (BUS) with different processes that share global customers. They have implemented a multi-org strategy with one org consolidating customer 360-degree view, and four orgs for the different BUS. Each of the BU orgs read and write customer information from/to the customer 360-degree view org in real time. UC is now launching a new BU that will use Salesforce. It does not share customers with the other BUS and needs flexibility in their Business processes. What should an architect recommend as org strategy for this new BU

- A. Use the same Salesforce org of another BU that shares geographical localization with the new BU.
- **B. Use a new stand-alone Salesforce org for the new BU, not integrated with the others.**
- C. Deploy the new BU in customer 360-degree view org, and read and write customer information from it without need of custom integration.
- D. Use a new Salesforce org for the new BU, and customize integration so that it reads and writes customer information from the customer data org

**Answer: B**

Explanation:

Explanation

The best option for the new BU is to use a new stand-alone Salesforce org, not integrated with the others. This will allow the new BU to have flexibility in their business processes, without affecting or being affected by the other BUs. Since the new BU does not share customers with the other BUs, there is no need to integrate with the customer 360-degree view org, which would add complexity and cost. Deploying the new BU in the customer 360-degree view org is not a good idea, as it would create confusion and duplication of data, as well as limit the customization options for the new BU. Using the same Salesforce org of another BU that shares geographical localization with the new BU is also not a good idea, as it would create conflicts and dependencies between the two BUs, as well as reduce the performance and security of the org. Using a new Salesforce org for the new BU, and customizing integration so that it reads and writes customer information from the customer data org is unnecessary and inefficient, as the new BU does not need to access or update the customer data of the other BUs.

### NEW QUESTION # 170

Universal Containers (UC) innovative apps division is releasing an application which can be installed in their trading partners Salesforce environment. The partners can then build on top of the application with process builders and triggers so the container booking process can be integrated with the trading partners own processes. What is the recommended mechanism for releasing the application?

- A. Unmanaged Package.
- **B. Managed Package.**
- C. Change Sets.
- D. Zip file deployable by Force.Com Migration Tool.

**Answer: B**

Explanation:

Explanation

Managed package is the recommended mechanism for releasing an application that can be installed in other Salesforce environments. Managed packages allow for versioning, licensing, and upgradeability of the application. They also protect the intellectual property of the developer by hiding the source code of the Apex classes and Visualforce pages.

### NEW QUESTION # 171

Universal Containers is a Salesforce AppExchange partner and they are planning to launch recommended that they use a partner development org for development. New app. The technical architect What are the three benefits of using a partner development org over an individual development org in this scenario?

Choose 3 answers

- A. Partner development org never expires.
- B. Only partner development org supports managed beta testing.
- **C. Partner development org offers higher API limit.**
- **D. Partner development org has a greater number of licenses available for the team.**
- **E. Partner development org offers more storage.**

Answer: C,D,E

## NEW QUESTION # 172
