## EMC Dell Unity Deploy 2023 Exam Sample Questions (Q384-Q389):

### NEW QUESTION # 384

What does the Dell Unity XT system do after a NAS server starts outbound traffic to an external service?

- **A. Uses Packet Reflect for outbound communication**
- B. Uses the active production interface
- C. Selects interfaces that are based on advance static routes
- D. Creates an active interface buffer cache in DRAM

**Answer: A**

Explanation:

Explanation

Packet Reflect is a feature that enables the Dell Unity XT system to use the same interface for outbound communication that was used for inbound communication. This feature is useful when the Dell Unity XT system needs to initiate outbound traffic to an external service, such as DNS, NTP, LDAP, or SMTP. By using Packet Reflect, the Dell Unity XT system can avoid routing issues, firewall restrictions, or network address translation problems that may occur when using a different interface for outbound communication. When a NAS server starts outbound traffic to an external service, the Dell Unity XT system uses Packet Reflect to send the packets through the same interface that received the packets from the external service. Therefore, the correct answer is D. Uses Packet Reflect for outbound communication. References:
