Which of the following searches show a valid use of a macro? (Choose all that apply.)

- A. `index=main source=mySource oldField=* |'makeMyField(oldField)'| table _time newField`
- B. `index=main source=mySource oldField=* | "newField('makeMyField(oldField)')"' | table _time newField`

The searches A and C show a valid use of a macro. A macro is a reusable piece of SPL code that can be called by using single quotes ('). A macro can take arguments, which are passed inside parentheses after the macro name. For example, 'makeMyField(oldField)' calls a macro named makeMyField with an argument oldField.
