## New Adobe AD0-E725 Exam Pattern | AD0-E725 Exam Discount Voucher

Our AD0-E725 prep torrent boosts the highest standards of technical accuracy and only use certificated subject matter and experts. We provide the latest and accurate AD0-E725 exam torrent to the client and the questions and the answers we provide are based on the real exam. We can promise to you the passing rate is high and about 98%-100%. Our AD0-E725 Test Braindumps also boosts high hit rate and can stimulate the exam to let you have a good preparation for the AD0-E725 exam. Your success is bound with our AD0-E725 exam questions.

### Adobe Commerce Developer Expert Sample Questions (Q32-Q37):

#### NEW QUESTION # 32

A customer wants their Adobe Commerce Cloud platform to be upgraded to the latest available official version. They would like to assess the compatibility of their current version compared to the upgraded version.

How should the Developer gather this information and compile an upgrade plan for the customer?

- A. Run the Site-Wide Analysis Tool (SWAT) which provides detailed information on the system.
- B. Familiarize themselves with the minimum system requirements of Adobe Commerce.
- C. Run the command `bin/magento upgrade:compatibility:report` to export the needed information.

**Answer: C**

Explanation:

Adobe Commerce provides a built-in Upgrade Compatibility Tool (UCT) that allows developers to check for potential code incompatibilities before performing a version upgrade.

The UCT:

\* Analyzes the current codebase against the target upgrade version.

\* Reports on deprecated classes, methods, and APIs that could break during the upgrade.

\* Produces a compatibility report (HTML/CSV/JSON) that can be shared with customers as part of the upgrade plan.

This tool is specifically designed to help developers assess upgrade risks and is the official Adobe Commerce-recommended method for preparing upgrade assessments.

\* Option A (SWAT): The Site-Wide Analysis Tool provides performance, configuration, and health insights, but it does not analyze code compatibility for upgrades.

\* Option B (minimum system requirements): This ensures the environment is technically capable of running the new version but does not provide insights into custom code and extension compatibility.

Official Documentation Extracts:

\* "The Upgrade Compatibility Tool helps you identify potential issues in your custom code when upgrading to a new Adobe Commerce release. It scans your codebase and produces a report highlighting possible code changes that may be required."- Adobe Commerce DevDocs: Upgrade Compatibility Tool

\* "Run `bin/magento upgrade:compatibility:report` to generate the upgrade compatibility report. The report provides details about deprecated and removed code, APIs, and incompatibilities."- Adobe Commerce CLI Reference

#### NEW QUESTION # 33

In an Adobe Commerce store, there is a product attribute called `external_service_id`. A Developer must ensure the attribute is only available for specific users via the API.

How should the Developer achieve the required permissions?

- A. Setup a custom permission control at the attribute level because it is not supported out of the box.
- B. Configure the access control list (ACL) resource for the `external_service_id` attribute via etc

/extension\_attributes.xml.

- C. Implement an afterGet plugin and exclude the attribute for non-authorized users.

**Answer: A**

#### NEW QUESTION # 34

A Developer is working on an Adobe Commerce store, and the security team has flagged certain inline scripts in the store as vulnerable to potential attacks. The Developer decides to implement Content Security Policies (CSP) to secure the store's environment.

What will the Developer achieve by taking this action?

- A. Restrict which resources (scripts, styles, images) are allowed to load on the website.
- B. Prevent users from accessing certain areas of the website based on their IP address.
- C. Ensure that all user input is sanitized before being processed by the application.

**Answer: A**

#### NEW QUESTION # 35

An Adobe Commerce Developer is tasked with adding a custom tax calculation to the checkout process. In addition to core tax calculations, a legacy code extending core tax calculation classes is also found. The Developer wants to utilize Magento's dependency injection system effectively to meet requirements, ensuring the solution works without modifying the existing core and legacy classes.

What should the Developer implement to achieve this?

- A. Virtual types
- B. Preferences
- C. Constructor arguments

**Answer: A**

#### NEW QUESTION # 36

A recent client-reported bug is fixed by the Adobe Commerce community. The Adobe engineering team has not yet released the patch or committed the bug fix to GitHub. A Developer acquires the custom patch and releases it to their Adobe Commerce environments.

What are the recommended steps the Developer should follow to implement the custom patch for the bug fix?

- A. Install the cweagans/composer-patches module and edit the composer.json file to apply the custom patch.
- B. Update the quality-patches module and list the required patch in the magento-ce-patch.yaml file.
- C. Install only official patches supplied by them to maintain upgradability.

**Answer: A**

Explanation:

If a bug fix patch has not yet been officially released by Adobe (via Quality Patches Tool (QPT)), developers can apply custom patches using the cweagans/composer-patches package.

Option A is best practice in general, but in urgent scenarios, custom patches are allowed.

Option B applies only for official Adobe patches distributed via QPT, not for community-supplied or custom fixes.

Option C is correct: cweagans/composer-patches allows applying custom patches via composer.json until an official fix is available.
