Although this may not sound like the hardest job in the world, being a pharmacy technician isn't easy, as the work these people do directly affects the health of others. Therefore, it is vitally important that people hired as pharmacy technicians are qualified for this job. This is why more and more pharmacies and pharmacy chains expect their employees to have a valid PTCB credential.

Medical Tests Pharmacy Technician Certification Exam Sample Questions (Q140-Q145):

NEW QUESTION # 140

According to the Institute for Safe Medication Practices (ISMP), which of the following is a high-alert medication in an acute care

setting?

- A. Transdermal lidocaine
- B. Normal saline solution
- C. **Insulin U-500**
- D. Dextrose 5% solution

Answer: C

Explanation:

The Institute for Safe Medication Practices (ISMP) classifies Insulin U-500 as a high-alert medication in acute care settings because it is five times more concentrated than standard U-100 insulin. Errors in dosing or administration can result in severe hypoglycemia or hyperglycemia, leading to life-threatening consequences.

* A. Normal saline solution# Incorrect; 0.9% sodium chloride (NS) is not a high-alert medication, as it is a commonly used IV fluid with a wide safety margin.

* B. Transdermal lidocaine# Incorrect; although lidocaine is a local anesthetic, its transdermal form is not considered high-alert.

* C. Dextrose 5% solution (D5W)# Incorrect; while used in IV therapy, D5W is not classified as high-alert in acute care settings.

Other Answer Choices Explained: References:

* ISMP List of High-Alert Medications in Acute Care Settings (2023 Update)

* PTCB PTCE Exam Content Outline (Medication Safety & High-Alert Medications)

* USP <800> Handling of High-Alert Medications

NEW QUESTION # 141

A patient weighs 218 Lbs. What is their weight in Kg?

- A. 479Kg
- **B. 99Kg**
- C. 109Kg
- D. 409Kg

Answer: B

NEW QUESTION # 142

Which drug would be used for athletes foot:

- A. Ranitidine
- **B. Fluconazole**
- C. Tamsulosin
- D. Sildenafil

Answer: B

NEW QUESTION # 143

Which of the following is a Schedule II Controlled Substance?

- A. diazepam
- **B. meperidine**
- C. pentazocine
- D. propoxyphene

Answer: B

NEW QUESTION # 144

Oxybutynin is indicated to treat symptoms associated with:

- **A. Overactive bladder**

- B. Pancreatitis
- C. Bronchitis
- D. Hyperlipidemia

Answer: A

Explanation:

* Oxybutynin (Ditropan, Oxytrol) is an anticholinergic/antispasmodic medication that relaxes the bladder muscle to treat overactive bladder (OAB).

* It reduces symptoms such as frequent urination, urgency, and urinary incontinence by blocking muscarinic receptors that control bladder contractions.

Why Other Options Are Incorrect:

* A. Bronchitis?#No, bronchitis is treated with bronchodilators, steroids, or antibiotics.

* B. Hyperlipidemia? No, hyperlipidemia (high cholesterol) is treated with statins (e.g., atorvastatin).

* D. Pancreatitis? No, pancreatitis is managed with IV fluids, pain control, and pancreatic enzyme therapy.
