New Plat-Arch-201 Exam Review & Plat-Arch-201 Test Cram Review

You many attend many certificate exams but you unfortunately always fail in or the certificates you get can't play the rules you wants and help you a lot. So what certificate exam should you attend and what method should you use to let the certificate play its due rule? You should choose the test Plat-Arch-201 certification and buys our Plat-Arch-201 study materials to solve the problem.

Passing the test Plat-Arch-201 certification can help you increase your wage and be promoted easily and buying our Plat-Arch-201 study materials can help you pass the test smoothly.

Salesforce Certified Platform Data Architect Sample Questions (Q89-Q94):

NEW QUESTION # 89

Universal Containers (UC) is transitioning from Classic to Lightning Experience. What does UC need to do to ensure users have access to its notices and attachments in Lightning Experience?

- A. Manually upload Notes in Lightning Experience.
- B. Manually upload Attachments in Lightning Experience.
- C. Migrate Notes and Attachment to Enhanced Notes and Files a migration tool
- D. Add Notes and Attachments Related List to page Layout in Lightning Experience.

Answer: C

Explanation:

The correct answer is C, migrate Notes and Attachment to Enhanced Notes and Files using a migration tool. Enhanced Notes and Files are the new features in Lightning Experience that replace the classic Notes and Attachments. They offer more functionality and security than the classic version. To access them in Lightning Experience, you need to migrate your existing Notes and Attachments using a migration tool provided by Salesforce. Adding Notes and Attachments Related List, manually uploading Notes or Attachments, or doing nothing are not valid solutions, as they will not enable you to use the enhanced features in Lightning Experience.

NEW QUESTION # 90

UC needs to load a large volume of leads into salesforce on a weekly basis. During this process the validation rules are disabled. What should a data architect recommend to ensure data quality is maintained in salesforce.

- A. Allow validation rules to be activated during the load of leads into salesforce.
- B. Activate validation rules once the leads are loaded into salesforce to maintain quality.
- C. Develop custom APEX batch process to improve quality once the load is completed.
- D. Ensure the lead data is preprocessed for quality before loading into salesforce.

Answer: D

Explanation:

Ensuring the lead data is preprocessed for quality before loading into Salesforce is the best way to maintain data quality. Activating validation rules after the load or developing a custom Apex batch process may not catch all the errors or may require additional time and resources. Allowing validation rules to be activated during the load may cause failures or delays.

NEW QUESTION # 91

Northern Trail Outfitters (NTO) has implemented Salesforce for its sales users. The opportunity management in Salesforce is implemented as follows:

1. Sales users enter their opportunities in Salesforce for forecasting and reporting purposes.
2. NTO has a product pricing system (PPS) that is used to update the Opportunity Amount field on opportunities on a daily basis.
3. PPS is the trusted source within NTO for Opportunity Amount.
4. NTO uses Opportunity Forecast for its sales planning and management.

Sales users have noticed that their updates to the Opportunity Amount field are overwritten when PPS updates their opportunities. How should a data architect address this overwriting issue?

- A. Create a custom field for Opportunity amount that sales users update separating the field that PPS updates.
- B. Create a custom field for Opportunity amount that PSS updates separating the field sales user updates.
- C. Change Opportunity Amount field access to Read Only for sales users field-level security.
- D. Change PSS integration to update only Opportunity Amount field when the value is null.

Answer: C

Explanation:

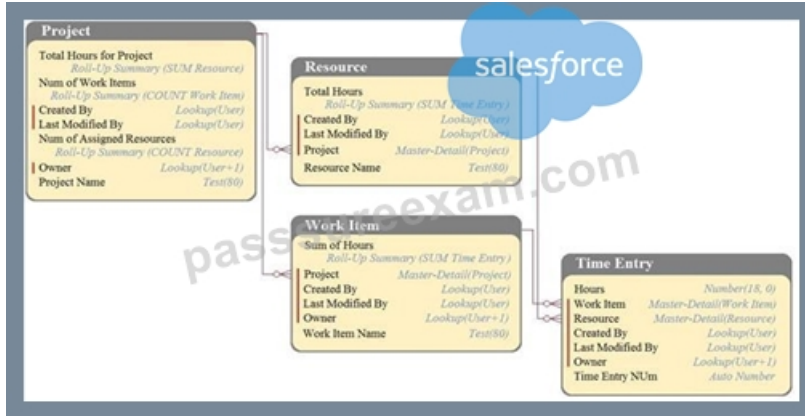

Changing Opportunity Amount field access to Read Only for sales users field-level security (option C) is the best way to address the

overwriting issue, as it prevents sales users from updating the field that is controlled by PPS, and ensures data consistency and accuracy.

NEW QUESTION # 92

DreamHouse Realty has a data model as shown in the image. The Project object has a private sharing model, and it has Roll-Up summary fields to calculate the number of resources assigned to the project, total hours for the project, and the number of work items associated to the project.

There will be a large amount of time entry records to be loaded regularly from an external system into Salesforce.

What should the Architect consider in this situation?

- A. Calculate summary values instead of Roll-Up by using triggers.
- B. Calculate summary values instead of Roll-Up by using workflow.
- C. Load all data using external IDs to link to parent records.
- **D. Load all data after deferring sharing calculations.**

Answer: D

Explanation:

According to the exam guide, one of the objectives is to "describe the use cases and considerations for deferring sharing calculations". This implies that option A is the correct way to load large amounts of data into Salesforce without affecting performance and data integrity.

Deferring sharing calculations allows the data to be loaded first and then the sharing rules to be applied later.

NEW QUESTION # 93

North Trail Outfitters (NTO) operates a majority of its business from a central Salesforce org, NTO also owns several secondary orgs that the service, finance, and marketing teams work out of, At the moment, there is no integration between central and secondary orgs, leading to data- visibility issues.

Moving forward, NTO has identified that a hub-and-spoke model is the proper architect to manage its data, where the central org is the hub and the secondary orgs are the spokes.

Which tool should a data architect use to orchestrate data between the hub org and spoke orgs?

- A. Develop custom APIs to poll the hub org for change data and push into the spoke orgs.
- B. Develop custom APIs to poll the spoke for change data and push into the org.
- **C. A middleware solution that extracts and distributes data across both the hub and spokes.**
- D. A backup and archive solution that extracts and restores data across orgs.

Answer: C

Explanation:

According to the Salesforce documentation, a hub-and-spoke model is an integration architecture pattern that allows connecting multiple Salesforce orgs using a central org (hub) and one or more secondary orgs (spokes). The hub org acts as the master data source and orchestrates the data flow between the spoke orgs. The spoke orgs act as the consumers or producers of the data and communicate with the hub org.

To orchestrate data between the hub org and spoke orgs, a data architect should use:

A middleware solution that extracts and distributes data across both the hub and spokes (option A). This means using an external service or tool that can connect to multiple Salesforce orgs using APIs or connectors, and perform data extraction, transformation,

and distribution operations between the hub and spoke orgs. This can provide a scalable, flexible, and reliable way to orchestrate data across multiple orgs.

NEW QUESTION # 94

.....

If you buy the Salesforce Plat-Arch-201 practice materials within one year you can enjoy free updates. Being the most competitive and advantageous company in the market, our Salesforce Certified Platform Data Architect Plat-Arch-201 exam questions have helped tens of millions of exam candidates, realized their dreams all these years. What you can harvest is not only certificate but of successful future from now on just like our former clients.
