Implementing and Operating Cisco Service Provider Network Core Technologies certification is also recognized by the industry and can help professionals differentiate themselves from their peers.

## Cisco Implementing and Operating Cisco Service Provider Network Core Technologies Sample Questions (Q142-Q147):

### NEW QUESTION # 142

Egress PE NAT is being used via a single centralized router to provide Internet access to L3VPN customers. Which description of the NAT operation is true?

- A. The different L3VPNs using the Internet access must not have IP overlaps internally
- B. Users in different VRFs cannot share the same outside global IP address
- C. The NAT table contains a field to identify the inside VRF of a translation
- D. Multiple address pools are needed for the same L3VPN because each site has a separate NAT

**Answer: C**

Explanation:

Egress PE NAT via a single centralized router allows L3VPN customers to access the internet. The NAT operation maintains a table that includes a field to identify the inside VRF of a translation. This is crucial for distinguishing between different customer VPNs that may use overlapping IP address spaces. By having this field, the NAT process can correctly associate each internal IP with its respective VRF and outside global IP address. References: Centralized egress to internet, Egress PE NAT single centralized router.

### NEW QUESTION # 143

Refer to the exhibit.

Refer to the exhibit. Which part of the diagram will host OpenStack components?

- A. Aggregation
