Note: The whole contents list is interactive not just the page number.

This timetable contains a full list of all tests for the March 2026 series. This is the final version of the timetable. Please note there may be some changes from the provisional timetable. You can view the timetable by week or by syllabus.

Any time for candidates to read through question papers and to study maps etc. is already included in the total time shown in the timetable. You must not allow any additional time.

Planning your timetable

Tests must be taken on the date as shown on this timetable. You can decide when in the day your candidates take the test, you do not need to tell us.

If you need to run more than one sitting of a test on the same day, you must apply using preparation - form B found at www.cambridgeinternational.org/forms

You must apply for additional sittings a week before the test. You must keep groups of candidates separate from each other using our Full Centre Supervision regulations until all candidates have taken the test.

If a candidate misses a test, you cannot run the test on a different day. See section 1.2.1 of the Cambridge Handbook.

Communicating timetable arrangements to candidates

You are responsible for making sure candidates know:

- The start and finish time for each test
- Any necessary supervision arrangements
- Any updates to the timetable

Any updates to this timetable will be published on the timetables page of the Cambridge International website (www.cambridgeinternational.org/timetables), and will be shared with you on our monthly Cambridge Exam Officer newsletter. Visit www.cambridgeinternational.org/examofficers to find out more about this important resource.

Visit the Timetables section of Cambridge International Direct (<http://direct.cambridge.org.uk>) to download the exam dates in .csv format or download a timetable which only includes the exams you have made entries for.

Timetable clashes and deviations

Please study the final timetable and identify any potential timetable clashes. You should wait until you have submitted your entries and received your timetable clash report before applying for a timetable deviation. For further details about timetable clashes and applying for a timetable deviation please see section 1 of the Cambridge Handbook.

Look! This document is interactive ...

This timetable has interactive features, just click on text in the contents above to go to the section you want to read. There is also an interactive section at the bottom of each page made. You can use this in the same way, just click and you will be taken to the relevant page.

Interactive features work best in Adobe Reader 9 or Adobe Acrobat. You can download the latest Adobe Reader for free at www.adobe.com/products/reader.html

You must want to receive our 156-590 practice questions at the first time after payment. Don't worry. As long as you finish your payment, our online workers will handle your orders of the 156-590 study materials quickly. The whole payment process lasts a few seconds. And if you haven't received our 156-590 Exam Braindumps in time or there are some trouble in opening or downloading the file, you can contact us right away, and our technicals will help you solve it in the first time.

We provide top quality verified CheckPoint certifications preparation material for all the 156-590 exams. Our 156-590 certified experts have curated questions and answers that will be asked in the real exam, and we provide money back guarantee on PrepPDF CheckPoint preparation material. Moreover, we also offer 156-590 practice software that will help you assess your skills before real 156-590 exams. Here is exclusive CheckPoint bundle deal, you can get all 156-590 exam brain dumps now at discounted price.

156-590 Reliable Exam Testking - Reliable 156-590 Real Exam

If you start to prepare for the 156-590 exam from books, then you will find that the content is too broad for you to cope with the exam questions. So, we just pick out the most important knowledge to learn. Through large numbers of practices, you will soon master the core knowledge of the 156-590 Exam. It is important to review the questions you always choose mistakenly. You should concentrate on finishing all exercises once you are determined to pass the 156-590 exam. And you will pass for sure as long as you study with our 156-590 study guide carefully.

CheckPoint Check Point Certified Threat Prevention Specialist (CTPS) Sample Questions (Q11-Q16):

NEW QUESTION # 11

Which protection setting is generally the LEAST resource intensive?

- A. Inactive
- B. Inspect
- C. Prevent
- D. Detect

Answer: A

Explanation:

The correct answer is D. Inactive . A protection set to Inactive is not enforced for matching traffic, so it does not impose the same inspection and enforcement cost as active protection states. Check Point documentation explains that a Threat Prevention profile determines which protections are activated and which Software Blades are enabled for a rule or policy. The protections a profile activates depend on factors such as performance impact, threat severity, confidence level, and blade-specific settings. Check Point best-practice material also describes that administrators may tune IPS profiles and set protections to prevent , detect , or inactive . The relative resource logic is direct: Prevent is usually the most expensive because the gateway must inspect and enforce a blocking action inline. Inspect and Detect still require traffic analysis and matching logic, even if the final result is logging rather than prevention. Inactive removes the protection from enforcement consideration, making it the lowest resource option. This does not mean administrators should disable protections indiscriminately; Inactive should be used only when justified by risk, false-positive analysis, performance tuning, or compensating controls. Reference topics: IPS profile tuning, activation settings, performance impact, Prevent/Detect/Inactive behavior, Threat Prevention optimization.

NEW QUESTION # 12

What information is provided by "fwaccel stats"?

- A. You can check the percentage of F2F connections along with the reason why those connections could not be accelerated.
- B. This command is to enable acceleration on QoS packets.
- C. The command is used to examine traffic utilization statistics.
- D. You can check the SecureXL status of your Security Gateway.

Answer: A

Explanation:

The correct answer is B. You can check the percentage of F2F connections along with the reason why those connections could not be accelerated . The command fwaccel stats is part of SecureXL performance analysis. It is used to inspect how traffic is distributed across acceleration paths and firewall paths, which is essential when Threat Prevention blades or deep inspection features push traffic away from full acceleration.

Check Point's Performance Tuning documentation shows that fwaccel stats -s provides a summary including accelerated packets, F2Fed packets, F2V packets, CPASXL packets, PSLXL packets, and related totals.

The same documentation explains that F2F packets are packets SecureXL forwarded to the Firewall kernel in the slow path. This makes the command directly useful when diagnosing performance issues caused by non- accelerated inspection, SecureXL violations, or traffic that must be inspected by firewall and Threat Prevention components. Option A is wrong because fwaccel stats does not enable QoS acceleration. Option C is too generic; the command is not merely utilization monitoring. Option D better describes fwaccel stat , which reports SecureXL status, accelerated interfaces, and accelerated features. Reference topics: SecureXL, fwaccel stats, F2F packets, accelerated path, firewall path, performance troubleshooting.

NEW QUESTION # 13

Task: Check the current IPS protection version on the Security Gateway.

Answer:

Explanation:

See the Explanation.Explanation:

1- Open SmartConsole > Gateways & Servers.

- 2- Select the gateway and go to the "Threat Prevention" tab.
- 3- Note the IPS database version and timestamp.
- 4- On CLI: run ips stat to cross-verify.
- 5- Ensure version matches the latest published by Check Point.

NEW QUESTION # 14

What is the action for newly updated protections which is set in Staging Mode?

- A. None
- **B. Detect**
- C. Bypass
- D. Prevent

Answer: B

Explanation:

The correct answer is A. Detect . IPS Staging Mode is designed to introduce newly updated protections safely by observing their effect before enforcing active prevention. Check Point documentation states that when newly updated protections are set to Staging Mode , they remain in staging until the administrator changes their configuration. The default action for protections in staging mode is Detect , and this can be changed manually in the IPS Protections page. The R81.20 guide states the same behavior: newly updated protections in staging mode remain there until changed, and their default action is Detect.

This behavior is important during IPS lifecycle management because new signatures can introduce unexpected matches in production traffic. Detect mode allows the gateway to log and expose what the protection would have matched while avoiding immediate blocking. That gives administrators time to validate logs, tune exceptions, confirm confidence level, and assess business impact before switching to Prevent.

Bypass would skip inspection and is not the staging default. None is not the default action. Prevent may be the final desired enforcement state, but staging intentionally avoids immediate prevention until analysis is complete. Reference topics: IPS Updates Policy, Staging Mode, Newly Updated Protections, Detect action, IPS protection rollout.

NEW QUESTION # 15

What is the purpose of the Profile Cleanup option?

- A. It merges protection settings from multiple profiles into the Optimized Profile.
- B. It eliminates protections automatically which hasn't been used for a predefined amount of time.
- C. It serves as a cleanup policy if none of the protection matches the packets.
- **D. It lets you start over by removing all administrator overrides.**

Answer: D

Explanation:

The correct answer is A. It lets you start over by removing all administrator overrides . Profile Cleanup is a profile-maintenance function used when manual IPS protection changes have accumulated and the administrator wants to return the profile to its intended baseline logic. Check Point's IPS Protections documentation describes the Profile Cleanup window as offering actions such as Remove all user modified and Clear all staging , followed by installing the Threat Prevention Policy.

This makes the feature a reset and hygiene mechanism, not a rulebase cleanup rule. It removes administrator- level overrides that may have been introduced during tuning, temporary mitigation, testing, exception handling, or staged rollout of protections. Option B is incorrect because Profile Cleanup does not merge settings from several profiles into the Optimized Profile. Option C is incorrect because unmatched traffic handling is controlled by policy/rule behavior, not by Profile Cleanup. Option D is incorrect because protections are not automatically removed based on usage age by this option. The administrative value of Profile Cleanup is control: it lets the security architect re-align a profile with its default or intended activation criteria. Reference topics: IPS Protections, Activation Overrides, Profile Cleanup, Staging, Threat Prevention Policy installation.

NEW QUESTION # 16

.....

Some candidates may wonder that if the payment is quite complex and hard, in fact it is quite easy and simple. Once you have selected the 156-590 study materials, please add them to your cart. Then when you finish browsing our web pages, you can directly

come to the shopping cart page and submit your orders of the 156-590 learning quiz. Our payment system will soon start to work. Then certain money will soon be deducted from your credit card to pay for the 156-590 preparation questions. And we will send them to you in 5 to 10 minutes after your purchase.
