In today's society, everyone wants to find a good job and gain a higher social status. As we all know, the internationally recognized CPHQ certification means that you have a good grasp of knowledge of certain areas and it can demonstrate your ability. This is a fair principle. But obtaining this CPHQ certificate is not an easy task, especially for those who are busy every day. However, if you use our CPHQ Exam Torrent, we will provide you with a comprehensive service to overcome your difficulties and effectively improve your ability. If you can take the time to learn about our CPHQ quiz prep, I believe you will be interested in our products. Our learning materials are practically tested, choosing our CPHQ exam guide, you will get unexpected surprise.

NAHQ Certified Professional in Healthcare Quality Examination Sample Questions (Q640-Q645):

NEW QUESTION # 640

Which of the following tools is most useful for an organization to complete prior to implementation of a new device for administration of intravenous chemotherapy?

- A. Cause and effect diagram
- **B. Failure mode and effects analysis (FMEA)**
- C. Root cause analysis (RCA)
- D. Common cause analysis

Answer: B

Explanation:

Implementing a new device, especially for high-risk procedures like chemotherapy, requires proactive risk assessment to prevent potential errors.

Option A (Cause and effect diagram): Also known as a fishbone diagram, this identifies causes of existing problems, not potential risks of a new device.

Option B (Failure mode and effects analysis (FMEA)): This is the correct answer. The NAHQ CPHQ study guide states, "FMEA is a proactive tool used to identify potential failure modes, their effects, and mitigation strategies before implementing new processes or devices" (Domain 1). For a chemotherapy device, FMEA assesses risks like dosing errors or device malfunctions.

Option C (Common cause analysis): This analyzes routine variations, not specific risks of new devices.

Option D (Root cause analysis (RCA)): RCA is reactive, used after an incident, not proactively before implementation.

CPHQ Objective Reference: Domain 1: Patient Safety, Objective 1.5, "Use proactive risk assessment tools," emphasizes FMEA for new processes. The NAHQ study guide notes, "FMEA is critical for identifying risks in high-stakes interventions like chemotherapy" (Domain 1).

Rationale: FMEA proactively identifies and mitigates risks for a new chemotherapy device, aligning with CPHQ's patient safety principles.

Reference: NAHQ CPHQ Study Guide, Domain 1: Patient Safety, Objective 1.5.

NEW QUESTION # 641

IHI has designed a model to support its breakthrough collaborative series.

A key component of the collaborative model is the ability of participants to work with other organizations to discuss:

- A. Different problems
- **B. Both B and C**
- C. Barriers to improvement
- D. Lessons learned

Answer: B

NEW QUESTION # 642

By using a set of statistical tools to understand the fluctuation of a process, management can predict the expected outcome of that process. If the outcome is not satisfactory, management can use associated tools to further understand the elements influencing that process. Six sigma includes process steps which are commonly known as _____.

- A. DAMIE
- **B. DAMIC**
- C. PDSA
- D. PDCA

Answer: B

NEW QUESTION # 643

Either an increase or decrease in rate could be a signal of improvement. In other words, there is no clear direction of improvement for these measures. In this case an observed rate either above or below the expected range is an unfavourable outlier.

- A. Negative measures
- B. Structure measures
- C. Neutral measures
- D. Positive measures

Answer: C

NEW QUESTION # 644

The initial step in clinical pathway development is review of

- A. data for targeted population.
- B. continuous quality improvement methods.
- C. provider input.
- D. patient education materials.

Answer: A

Explanation:

The initial step in clinical pathway development is crucial to ensure that the pathway is relevant, evidence-based, and aligned with the needs of the patient population it intends to serve. The first step is to review and analyze data specific to the targeted population (Answer C). This involves collecting and examining clinical, demographic, and epidemiological data about the patient group for whom the pathway is being designed. This data review helps to identify common diagnoses, treatment outcomes, complications, and variations in care, which will inform the development of a pathway that is both relevant and effective.

The other options are important elements in the development and implementation of a clinical pathway, but they occur later in the process:

* Patient education materials (A) are developed after the clinical pathway has been established to ensure that patients understand their care plan.

* Continuous quality improvement methods (B) are applied after the pathway has been implemented to monitor its effectiveness and make necessary adjustments.

* Provider input (D) is crucial throughout the pathway development but comes after the initial data review when creating or refining the clinical pathway based on practical considerations and clinical expertise.
