Web-Based Practice Test Google ChromeOS-Administrator Exam Questions

If you are not certain whether the ChromeOS-Administrator prep guide from our company is suitable for you or not, so you are hesitate to buy and use our study materials. Do not worry, in order to help you solve your problem and let you have a good understanding of our ChromeOS-Administrator study practice dump, the experts and professors from our company have designed the trial version for all people. You can have a try of using the ChromeOS-Administrator Prep Guide from our company before you purchase it. We believe that the trial version provided by our company will help you know about our study materials well and make the good choice for yourself. More importantly, the trial version of the ChromeOS-Administrator exam questions from our company is free for all people. We believe that the trial version will help you a lot.

Google Professional ChromeOS Administrator Exam Sample Questions (Q92-Q97):

NEW QUESTION # 92

You want to enterprise enroll a device that has existing consumer accounts. What should you do first?

- A. Delete all consumer accounts, and then follow the same steps for enrolling a brand new device
- B. Wipe the device
- C. Contact Google support to convert the device into an enterprise device
- D. follow the same steps for enrolling a brand new device

Answer: A

Explanation:

- * Device State: Before you can enroll a ChromeOS device into an enterprise environment, it's crucial that it's not associated with any personal Google accounts. Existing consumer accounts can interfere with the enrollment process and the application of enterprise policies.
- * Data Backup (Optional): If the existing consumer accounts on the device contain important data, advise the users to back up their information before proceeding.
- * Account Removal: Sign in to the device with each consumer account and remove the account from the device. This ensures a clean slate for the enterprise enrollment process.
- * Powerwash (Optional): While not strictly necessary after removing accounts, performing a powerwash (factory reset) is a recommended step. It further erases any remaining data or configurations linked to the consumer accounts, ensuring a completely fresh start for the device.
- * Enrollment: Once the consumer accounts are removed (and optionally, after powerwashing), follow the standard enterprise enrollment steps for your organization. This typically involves entering enterprise credentials at the login screen, or using a unique enrollment token, depending on your company's setup.

NEW QUESTION # 93

You are asked why ChromeOS devices do not require additional antivirus software. How should you respond?

- A. Every time ChromeOS updates, it automatically updates the antivirus software on the device
- B. The Admin console automatically deploys antivirus software to enrolled ChromeOS devices and is included in the Chrome Enterprise/Education Upgrade
- C. Every ChromeOS device is pre-installed with antivirus software which automatically updates during the life of the device
- **D. As part of a multi-layered security approach ChromeOS uses a read-only operating system which cannot be affected by viruses**

Answer: D

Explanation:

ChromeOS is designed with multiple layers of security to protect against malware and viruses:

- * Read-only file system: Most of the operating system is stored in a read-only partition, making it difficult for malware to modify critical files.
- * Verified boot: Ensures the integrity of the operating system during bootup, preventing tampering by unauthorized software.
- * Sandboxing: Isolates different processes and websites, limiting the potential damage of any malware that manages to get through.
- * Automatic updates: Regularly delivers security patches and updates to address vulnerabilities.

While ChromeOS doesn't come with traditional antivirus software, its built-in security features provide robust protection against most threats.

NEW QUESTION # 94

Your team has members that work remotely. Your CTO would like to verify that your fleet of ChromeOS devices remains managed by corporate policy even after a device wipe. What would you configure to complete this objective?

- A. Set the setting "Powerwash" to "Do not allow powerwash to be triggered"
- **B. Set up the Admin console to force the device to automatically re-enroll after wiping**
- C. Create strict password rules
- D. Edit the setting "Verified Access" to "Require verified mode for boot for verified access"

Answer: B

Explanation:

To ensure that ChromeOS devices remain managed after a wipe, you need to enable forced re-enrollment.

This setting automatically re-enrolls the device into the management domain after it has been wiped (Powerwashed). This feature is crucial for organizations that manage devices remotely, as it prevents unauthorized users from removing management settings.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Device Management Best Practices Guide, which recommends enabling forced re-enrollment to maintain device management continuity.

"To ensure devices remain managed after wiping, enable the 'Forced Re-enrollment' policy in the Admin console. This setting ensures automatic re-enrollment upon startup." Forced re-enrollment prevents the loss of device management, which is essential for

maintaining security and policy compliance, especially in remote or dispersed environments.

Objectives:

- * Enforce device management after Powerwash.
- * Maintain compliance in remote work environments.

NEW QUESTION # 95

Your organization's security protocols require you to ensure that any unattended devices log the user out after 24 hours. You have 1000 ChromeOS devices to manage. How would you implement this with the least amount of admin effort?

- A. You can remotely access each device and sign out of the user account using Chrome Remote Desktop
- B. Force-install a custom app to each device in question that notifies the user that they need to sign out of their device after 24 hours
- C. Enable the 'User and Browser Settings' and update 'Maximum user session length' to any time up to 24 hours
- D. Create a corporate policy stating (he users are to manually sign out after the end of every shift

Answer: C

Explanation:

This is the most efficient method as it applies the setting to all devices within the organizational unit (OU) through a single policy change in the Admin console.

The other options are less efficient:

- * Corporate policy: Relies on user compliance and is difficult to enforce.
- * Chrome Remote Desktop: Requires manual intervention for each device.
- * Custom app: Adds complexity and potential security risks.

NEW QUESTION # 96

Your leadership team would like to verify that all ChromeOS devices are restarted to apply the new update as quickly as possible. You have 2000 devices and your Admin console is configured with automatic updates enabled. What can you do to ensure the restart with the least amount of admin effort?

- A. In the Admin console, in 'Device Settings', under 'AutoUpdate Settings', configure 'Device Updates' to 'Allow updates'
- B. In 'User and Browser Settings', under 'Chrome Updates', configure 'Relaunch Notifications' to 'Force relaunch after a period' and enter a time period in hours
- C. Manually connect to each device using Chrome Remote Desktop and restart the device
- D. Ask Human Resources to create and send out a company memo asking everyone to restart their devices within 24 hours

Answer: B

Explanation:

To ensure that devices are restarted to apply updates efficiently, use the 'Force relaunch after a period' setting within User and Browser Settings under Chrome Updates. This setting will automatically prompt users to restart their devices after the specified period.

Verified Answer from Official Source:

The correct answer is verified from the Google Admin Console Update Management Guide, which recommends configuring relaunch notifications to enforce updates.

"To ensure timely application of updates, set 'Relaunch Notifications' to 'Force relaunch after a period' within User and Browser Settings." This automated method reduces manual effort and guarantees that updates are applied promptly across the fleet.

Objectives:

- * Enforce device updates efficiently.
- * Utilize automated relaunch policies for ChromeOS devices.

NEW QUESTION # 97

.....

Many people want to be the competent people which can excel in the job in some area and be skillful in applying the knowledge to the practical working in some industry. But the thing is not so easy for them they need many efforts to achieve their goals. Passing the test ChromeOS-Administrator certification can make them become that kind of people and if you are one of them buying our ChromeOS-Administrator Study Materials will help you pass the test smoothly with few efforts needed. Our ChromeOS-Administrator exam questions are valuable and useful and if you buy our product will provide first-rate service to you to make you satisfied.
