NEW QUESTION # 24

FILL in BLANK

Assume endpoints T1 and T2 are registered with the same SC node zone (signaling routing is disabled on the SC). After T1 calls the number of T2 using H.323, T1 and T2 communicate with each other. In this process, a total of _____ TCP connection(s) need to be established between T1 and T2. (Enter an Arabic numeral.)

Answer:

Explanation:

NEW QUESTION # 25

In a SIP multipoint conference, if BFCP Trans Type is set to TCP on the MCU, the BFCP communication protocol must be set to TCP on the endpoint.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

BFCP transport must match between the MCU and endpoints; if the MCU is configured for TCP, endpoints must also use TCP for BFCP.

NEW QUESTION # 26

The new and old MCU architectures differ in bandwidth and codec resource usage during cascading. The new architecture supports multiple working modes, such as MCU, SFU, and IAU. The old architecture does not provide different working modes of the MCU. Which of the following statements is false about MCU cascading?

- A. When MCUs of the old architecture are cascaded, the cascading channel consumes bandwidth and codec resources.
- B. When the MCU of the old architecture is cascaded with the MCU of the new architecture, the cascading channel consumes bandwidth and codec resources.
- C. When the MCU of the old architecture is cascaded with the MCU of the new architecture, the proxy channel consumes bandwidth and codec resources.
- D. When MCUs of the new architecture are cascaded, both the cascading channel and proxy channel consume bandwidth and codec resources.

Answer: B

Explanation:

When cascading an old-architecture MCU with a new-architecture MCU, only the proxy channel on the new side consumes bandwidth and codec resources - the legacy MCU's cascading channel is not used.

NEW QUESTION # 27

The Record-Route header field indicates the route of a request.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

The Record-Route header is inserted by proxies to advertise their desired route for subsequent requests in the dialog.

NEW QUESTION # 28

An endpoint is disconnected from a conference due to a power failure. After the endpoint is powered on again, it is not called to the conference again, and the SMC does not detect that the endpoint is disconnected. The SMC O&M engineer finds that this fault is caused by the "Timeout for hang-up upon no code streams" parameter on the CloudMCU. Which of the following parameter values may cause this fault? (Choose all that apply.)

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A,D

Explanation:

Setting the timeout to 0 or -1 disables the automatic hang-up when no media streams are received, so the MCU never tears down the call and SMC doesn't detect the endpoint has dropped.
