

preparation ensures that a well-prepared and more confident candidate enters the examination arena. While using this SAP C\_DBADM\_2601 Practice Exam software, you can easily customize your SAP Certified - Database Administrator - SAP HANA mock exam conditions such as exam duration, number of questions, and many more. These SAP C\_DBADM\_2601 dumps bear the closest resemblance to the actual C\_DBADM\_2601 dumps that will be asked of you in the exam.

## SAP Certified - Database Administrator - SAP HANA Sample Questions (Q178-Q183):

### NEW QUESTION # 178

#### CHALLENGE 3 - Modernization Readiness Boundary Control

The rollout coordinator asks for one readiness statement covering the current plant wave and future SAP HANA Cloud analytics migration. The plant systems have backup and monitoring evidence, while the cloud database has provisioning and limited test data only. Which action best supports accurate release planning?

- A. Separate current plant wave readiness from SAP HANA Cloud migration readiness in the package.
- B. Treat cloud provisioning as proof that the migration workstream is ready for reporting transition.
- C. Delay the plant wave until the cloud database carries the same reporting workload.
- D. Combine the evidence into one status so stakeholders can review a single readiness outcome.

**Answer: A**

Explanation:

Feedback:

The package should separate current plant wave readiness from SAP HANA Cloud migration readiness. These evidence sets support different lifecycle decisions and should not be merged into one conclusion.

### NEW QUESTION # 179

#### CHALLENGE 3 - Freight Cloud Readiness Boundary

The modernization lead wants the SAP HANA Cloud database included in the same release readiness status because it is provisioned and has a freight sample dataset. The cloud environment has not completed the startup, monitoring, or recovery evidence package used for active cutover systems. What is the best response?

- A. Keep cloud migration evidence separate until cloud-specific administration validation is completed.
- B. Use the upgraded distribution system's monitoring record as the SAP HANA Cloud readiness record.
- C. Include the cloud database in the same status because provisioning and sample data show progress.
- D. Stop cloud planning until the current cutover release decision is fully completed.

**Answer: A**

Explanation:

Feedback:

Cloud migration evidence should remain separate until cloud-specific administration validation is completed. Provisioning and sample data support planning, but they do not equal active cutover release readiness.

### NEW QUESTION # 180

A financial services operations team notices that one SAP HANA database appears healthy in routine availability checks, yet a scheduled administration task fails each morning for only one administrator group. Database monitoring shows normal runtime status, and no general service interruption is visible. Another team member proposes reactivating the failed task definition because the symptom appears limited to that operation.

The lead administrator is concerned that the issue may sit upstream of the task itself and wants the first corrective action to restore execution without masking the actual dependency failure. The environment supports both cockpit-style checks and detailed administration review.

What is the best first action?

- A. Validate whether the affected administrator group still has the required access scope for the task and correct that dependency before changing the task definition.
- B. Restart the database services used by the task because healthy monitoring does not rule out a short-lived runtime inconsistency.

- C. Recreate the scheduled task because a failed execution usually indicates the task object is no longer valid.
- D. Increase the task retry interval so the operation has more time to complete under the current runtime state.

**Answer: A**

Explanation:

Feedback:

This is the required second-order diagnosis drill. The visible symptom is task failure, but the pattern is narrow: the database is healthy, and only one administrator group is affected. That points upstream to an access-scope dependency rather than a broken task object or platform outage. Validating and correcting the required access scope addresses the real execution blocker.

### NEW QUESTION # 181

A media distribution company recently adjusted a database configuration setting on its on-premises SAP HANA environment to improve background data preparation before replication to SAP HANA Cloud. The next day, overnight processing improved, but administrators notice that morning analyst sessions now experience short response spikes during a narrow usage window. System availability is normal, and memory indicators remain within target range.

A platform engineer recommends increasing CPU allocation because the analyst complaints appear during peak usage. The service owner wants the least disruptive correction that preserves the overnight gain while resolving the new daytime regression.

What is the best first step?

- A. Move the analyst workload completely to SAP HANA Cloud because the mixed landscape already supports that target environment.
- B. Reverse the full tuning change immediately because any daytime slowdown proves the optimization attempt failed overall.
- C. Compare the recent configuration change against the affected workload pattern and adjust only the setting that is shifting performance away from interactive use.
- D. Increase CPU resources first because a short response spike always indicates the current configuration is already correct but undersized.

**Answer: C**

Explanation:

Feedback:

The evidence shows a selective trade-off, not total system degradation: overnight processing improved, but a narrow interactive workload regressed. That points to a configuration-to-workload effect. The best first step is to correlate the recent setting change with the affected workload pattern and make a scoped correction. This preserves the intended gain while fixing the specific daytime impact.

### NEW QUESTION # 182

A retail services company runs SAP HANA for internal planning reports in a mixed environment with an on-premises database and administrative tooling used by the database operations team. After a planned operating window, the administrator starts the database and confirms that the host is reachable. However, SAP HANA cockpit still shows one required database service as inactive, and hdbsql connections for routine administrative checks fail for users who depend on that service path.

The constraint is that the administrator must restore normal database operation without treating host reachability as proof that the SAP HANA database stack is fully available. The operations lead also wants validation evidence before reopening the reporting workload.

Which action best addresses the startup inconsistency?

- A. Reboot the host because network reachability confirms the database problem is outside the SAP HANA service layer.
- B. Confirm the inactive database service status, correct the service startup condition, and validate administrative connectivity after the service is active.
- C. Approve reopening the workload because the host is reachable and SAP HANA cockpit can display the system.
- D. Recreate the hdbsql user credentials because failed command-line checks indicate an authentication-only problem.

**Answer: B**

Explanation:

Feedback:

This acts at the database service layer where the observable inconsistency exists. Restoring the required service and validating administrative connectivity confirms that startup, service availability, and execution access are aligned before workload reopening.

## NEW QUESTION # 183

.....

If you want to get a higher position in your company, you must do an excellent work. Then your ability is the key to stand out. Perhaps our C\_DBADM\_2601 study guide can help you get the desirable position. At present, many office workers are willing to choose our C\_DBADM\_2601 Actual Exam to improve their ability. With the help of our C\_DBADM\_2601 exam questions, not only they have strengthened their work competence and efficiency, but also they gained the certification which is widely accepted by the bigger enterprise.

**C\_DBADM\_2601 Updated Dumps:** [https://www.pass4surecert.com/SAP/C\\_DBADM\\_2601-practice-exam-dumps.html](https://www.pass4surecert.com/SAP/C_DBADM_2601-practice-exam-dumps.html)

SAP C\_DBADM\_2601 Pdf Dumps Especially for those who spend a long time in using their cellphone or tablet PC, learning with paper materials can help them stay away from electronic appliance and cultivate a good learning habit, Our desktop software SAP C\_DBADM\_2601 practice exam software provides a simulated scenario in which you may pick the SAP C\_DBADM\_2601 exam questions and schedule them to replicate an actual SAP exam-like situation, SAP C\_DBADM\_2601 Pdf Dumps Our system will never deduct extra money from your debit cards.

Our C\_DBADM\_2601 pdf vce are the most popular product in the similar field, Adding Contacts to the Contact List, Especially for those who spend a long time in using their cellphone or tablet PC, learning with C\_DBADM\_2601 Paper materials can help them stay away from electronic appliance and cultivate a good learning habit.

## Get High Pass-Rate C\_DBADM\_2601 Pdf Dumps and Pass Exam in First Attempt

Our desktop software SAP C\_DBADM\_2601 practice exam software provides a simulated scenario in which you may pick the SAP C\_DBADM\_2601 exam questions and schedule them to replicate an actual SAP exam-like situation.

Our system will never deduct extra money from C\_DBADM\_2601 Pdf Dumps your debit cards, You can contact our staff anytime and anywhere during the learning process, Please rest assured that our C\_DBADM\_2601 study guide and C\_DBADM\_2601 exam torrent will be the best choice for candidates.
