効果的ISO-IEC-27001-Lead-Implementer | 素敵なISO-IEC-27001-Lead-Implementer試験解説問題試験 | 試験の準備方法PECB Certified ISO/IEC 27001 Lead Implementer Examオンライン試験

なんで悩んでいるのですか。PECBのISO-IEC-27001-Lead-Implementer認定試験にどうやって合格するかということを心配していますか。確かに、ISO-IEC-27001-Lead-Implementer認定試験に合格することは困難なことです。しかし、あまりにも心配する必要はありません。試験に準備するとき、適当な方法を利用する限り、楽に試験に合格することができないわけではないです。では、どんな方法が効果的な方法なのかわかっていますか。CertJukenのISO-IEC-27001-Lead-Implementer問題集を使用することが最善の方法の一つです。CertJukenは今まで数え切れないIT認定試験の受験者を助けて、皆さんから高い評判をもらいました。この問題集はあなたの試験の一発合格を保証することができますから、安心に利用してください。

この試験では、情報セキュリティ管理に関連するさまざまなトピックがカバーされます。情報セキュリティの原則と概念、リスク管理、ISMSの実装と維持を含みます。また、候補者の情報セキュリティリスクの評価と管理能力、セキュリティコントロールの開発と実装、ISMSの効果の監視と改善能力もテストされます。この試験は、ISO/IEC 27001標準に基づいた効果的なISMSの実装と維持能力を評価するために設計されています。

PECB Certified ISO/IEC 27001 Lead Implementer Exam 認定 ISO-IEC-27001-Lead-Implementer 試験問題 (Q113-Q118):

質問 # 113

Which of the following statements regarding information security risk is NOT correct?

- A. Information security risk can be expressed as the effect of uncertainty on information security objectives
- **B. Information security risk cannot be accepted without being treated or during the process of risk treatment**
- C. Information security risk is associated with the potential that the vulnerabilities of an information asset may be exploited by threats

正解: B

解説:

According to ISO/IEC 27001:2022, information security risk can be accepted as one of the four possible options for risk treatment, along with avoiding, modifying, or sharing the risk¹². Risk acceptance means that the organization decides to tolerate the level of risk without taking any further action to reduce it³. Risk acceptance can be done before, during, or after the risk treatment process, depending on the organization's risk criteria and the residual risk level⁴.

質問 # 114

Scenario 2:

Beauty is a well-established cosmetics company in the beauty industry. The company was founded several decades ago with a passion for creating high-quality skincare, makeup, and personal care products that enhance natural beauty. Over the years, Beauty has built a strong reputation for its innovative product offerings, commitment to customer satisfaction, and dedication to ethical and sustainable business practices.

In response to the rapidly evolving landscape of consumer shopping habits, Beauty transitioned from traditional retail to an e-commerce model. To initiate this strategy, Beauty conducted a comprehensive information security risk assessment, analyzing potential threats and vulnerabilities associated with its new e-commerce venture, aligned with its business strategy and objectives. Concerning the identified risks, the company implemented several information security controls. All employees were required to sign confidentiality agreements to emphasize the importance of protecting sensitive customer data. The company thoroughly reviewed user access rights, ensuring only authorized personnel could access sensitive information. In addition, since the company stores valuable products and unique formulas in the warehouse, it installed alarm systems and surveillance cameras with real-time alerts to prevent any potential act of vandalism.

After a while, the information security team analyzed the audit logs to monitor and track activities across the newly implemented security controls. Upon investigating and analyzing the audit logs, it was discovered that an attacker had accessed the system due to out-of-date anti-malware software, exposing customers' sensitive information, including names and home addresses. Following this, the IT team replaced the anti-malware software with a new one capable of automatically removing malicious code in case of similar incidents. The new software was installed on all workstations and regularly updated with the latest malware definitions, with an automatic update feature enabled. An authentication process requiring user identification and a password was also implemented to access sensitive information.

During the investigation, Maya, the information security manager of Beauty, found that information security responsibilities in job descriptions were not clearly defined, for which the company took immediate action. Recognizing that their e-commerce operations would have a global reach, Beauty diligently researched and complied with the industry's legal, statutory, regulatory, and contractual requirements. It considered international and local regulations, including data privacy laws, consumer protection acts, and global trade agreements.

To meet these requirements, Beauty invested in legal counsel and compliance experts who continuously monitored and ensured the company's compliance with legal standards in every market they operated in. Additionally, Beauty conducted multiple information security awareness sessions for the IT team and other employees with access to confidential information, emphasizing the importance of system and network security.

Under which category does the vulnerability identified by Maya during the incident fall into?

- A. Network
- B. Site
- **C. Organization**

正解: C

質問 # 115

Scenario 6: Skyver offers worldwide shipping of electronic products, including gaming consoles, flat-screen TVs, computers, and printers. In order to ensure information security, the company has decided to implement an information security management system (ISMS) based on the requirements of ISO/IEC 27001.

Colin, the company's best information security expert, decided to hold a training and awareness session for the personnel of the

company regarding the information security challenges and other information security-related controls. The session included topics such as Skyver's information security approaches and techniques for mitigating phishing and malware. One of the participants in the session is Lisa, who works in the HR Department. Although Colin explains the existing Skyver's information security policies and procedures in an honest and fair manner, she finds some of the issues being discussed too technical and does not fully understand the session. Therefore, in a lot of cases, she requests additional help from the trainer and her colleagues. Based on the scenario above, answer the following question:
How should Colin have handled the situation with Lisa?

- A. Deliver training and awareness sessions for employees with the same level of competence needs based on the activities they perform within the company
- B. Promise Lisa that future training and awareness sessions will be easily understandable
- C. Extend the duration of the training and awareness session in order to be able to achieve better results

正解: A

解説:

According to the ISO/IEC 27001:2022 standard, the organization should determine the necessary competence of persons doing work under its control that affects the performance and effectiveness of the ISMS. The organization should also ensure that these persons are aware of the information security policy, their contribution to the effectiveness of the ISMS, the implications of not conforming with the ISMS requirements, and the benefits of improved information security performance. The organization should also provide information security awareness, education, and training to all employees and, where relevant, contractors and third-party users, as relevant for their job function. The awareness, education, and training programs should be planned, implemented, and maintained according to the needs of the organization and the results of the risk assessment and risk treatment. Therefore, Colin should have handled the situation with Lisa by delivering training and awareness sessions for employees with the same level of competence needs based on the activities they perform within the company. This would ensure that the content and the language of the sessions are appropriate and understandable for the target audience, and that the sessions are effective and efficient in achieving the desired learning outcomes. By doing so, Colin would also avoid wasting time and resources on delivering sessions that are too technical or too basic for some employees, and that do not address their specific information security challenges and responsibilities.

質問 # 116

Scenario 6: GreenWave

GreenWave, a manufacturer of sustainable and energy efficient home appliances, specializes in solar-powered devices, EV chargers, and smart thermostats. To ensure the protection of customer data and internal operations against digital threats, the company has implemented an ISO/IEC 27001-based information security management system (ISMS). GreenWave is also exploring innovative IoT solutions to further improve energy efficiency in buildings. GreenWave is committed to maintaining a high standard of information security within its operations. As part of its continuous improvement approach, the company is in the process of determining the competence levels required to manage its ISMS. GreenWave considered various factors when defining these competence requirements, including technological advancements, regulatory requirements, the company's mission, strategic objectives, available resources, as well as the needs and expectations of its customers. Furthermore, the company remained committed to complying with ISO/IEC 27001's communication requirements. It established clear guidelines for internal and external communication related to the ISMS, defining what information to share, when to share it, with whom, and through which channels. However, not all communications were formally documented; instead, the company classified and managed communication based on its needs, ensuring that documentation was maintained only to the extent necessary for the ISMS effectiveness.

GreenWave has been exploring the implementation of AI solutions to help understand customer preferences and provide personalized recommendations for electronic products. The aim was to utilize AI technologies to enhance problem-solving capabilities and provide suggestions to customers. This strategic initiative aligned with GreenWave's commitment to improving the customer experience through data-driven insights.

Additionally, GreenWave looked for a flexible cloud infrastructure that allows the company to host certain services on internal and secure infrastructure and other services on external and scalable platforms that can be accessed from anywhere. This setup would enable various deployment options and enhance information security, crucial for GreenWave's electronic product development. According to GreenWave, implementing additional controls in the ISMS implementation plan has been successfully executed, and the company was ready to transition into operational mode. GreenWave assigned Colin the responsibility of determining the materiality of this change within the company.

Question:

Did GreenWave appropriately determine the competence levels required to support their ISMS?

- A. Yes - because GreenWave considered only the internal factors, which are the most important for its operations
- B. No - because GreenWave did not consider external issues, which are relevant to the ISMS
- C. Yes - because GreenWave considered external issues, internal factors, and needs and expectations of relevant interested

parties

正解: C

解説:

ISO/IEC 27001:2022 Clause 7.2 -Competence states:

"The organization shall determine the necessary competence of persons... considering internal and external issues, and the needs and expectations of interested parties relevant to the ISMS." GreenWave followed this clause by factoring in both internal and external influences, including regulatory and customer requirements. This comprehensive view ensures that assigned personnel are adequately equipped to manage ISMS functions.

質問 # 117

What risk treatment option has Company A implemented if it has required from its employees the change of email passwords at least once every 60 days?

- A. Risk avoidance
- B. Risk retention
- C. Risk modification

正解: C
