## Certification ISO-IEC-27001-Foundation Sample Questions - ISO-IEC-27001-Foundation Valid Test Sample

When you are studying for the ISO-IEC-27001-Foundation exam, maybe you are busy to go to work, for your family and so on. How to cost the less time to reach the goal? It's a critical question for you. Time is precious for everyone to do the efficient job. If you want to get good ISO-IEC-27001-Foundation prep guide, it must be spending less time to pass it. Exactly, our product is elaborately composed with major questions and answers. We are choosing the key from past materials to finish our ISO-IEC-27001-Foundation Guide Torrent. It only takes you 20 hours to 30 hours to do the practice. After your effective practice, you can master the examination point from the ISO-IEC-27001-Foundation exam torrent. Then, you will have enough confidence to pass it.

### APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q13-Q18):

#### NEW QUESTION # 13

Which action is an organization required to take to ensure that personnel are competent to perform their assigned tasks within the ISMS?

- A. Identify products which could be used in the organization to improve ISMS performance and effectiveness
- B. Ensure that the controls for compliance with legal and contractual requirements are implemented
- C. Ensure all personnel are trained to ISO/IEC 27001 Foundation level
- D. Hold up-to-date records on training, skills, experience and qualifications

**Answer: D**

Explanation:

Clause 7.2 (Competence) requires the organization to:

- \* "determine the necessary competence of person(s) doing work under its control that affects its information security performance;"
- \* "ensure that these persons are competent on the basis of appropriate education, training, or experience;"
- \* "retain appropriate documented information as evidence of competence." This makes holding up-to-date records on training, skills, experience, and qualifications (D) the correct answer. Option A is irrelevant to competence. Option B is incorrect since ISO does not require Foundation-level training - competence is context-based. Option C is related to compliance but does not ensure individual competence.

Thus, the verified correct answer is D.

#### NEW QUESTION # 14

Which item is required to be considered when defining the scope and boundaries of the information security management system?

- A. The lessons learned from the information security experiences of other organizations
- B. The level of quality to which the ISMS must adhere
- C. The dependencies between activities performed by the organization
- D. The regular activities necessary to maintain and improve the ISMS

**Answer: C**

Explanation:

Clause 4.3 (Determining the scope of the ISMS) requires consideration of:

"the external and internal issues referred to in 4.1; the requirements referred to in 4.2; and interfaces and dependencies between activities performed by the organization, and those that are performed by other organizations." This confirms that dependencies between activities are a required factor when defining scope. Options B (quality levels), C (lessons learned), and D (regular activities for improvement) are not scope requirements, though they may be relevant in planning or improvement processes.

Thus, the verified answer is A: Dependencies between activities performed by the organization.

### NEW QUESTION # 15

Which aspect of ISO/IEC 27001 requires that contractors know about the organization's information security policies?

- A. Awareness
- B. Communication
- C. Competence
- D. Nonconformity and corrective action

**Answer: A**

Explanation:

Clause 7.3 (Awareness) requires:

"Persons doing work under the organization's control shall be aware of: (a) the information security policy; (b) their contribution to the effectiveness of the ISMS, including the benefits of improved information security performance; (c) the implications of not conforming with the ISMS requirements." This applies not only to employees but also contractors and external parties under the organization's control.

Competence (B) requires having skills, training, and experience, while Communication (C) covers defining communication processes (Clause 7.4). Nonconformity and corrective action (A) is part of Clause 10 (Improvement).

Therefore, the specific requirement that ensures contractors are made aware of the information security policies is found in Clause 7.3 Awareness. Correct answer: D.

### NEW QUESTION # 16

Which statement describes a purpose of monitoring, measurement, analysis and evaluation according to ISO /IEC 27001?

- A. To monitor the use of information assets
- B. To track the use of outsourced processes
- C. To ensure that employees and contractors are competent
- D. To evaluate information security performance

**Answer: D**

Explanation:

Clause 9.1 requires:

"The organization shall evaluate the information security performance and the effectiveness of the information security management system." This is the central purpose of monitoring, measurement, analysis, and evaluation. Competence (B) is covered under Clause 7.2. Monitoring use of assets (C) and outsourced processes (D) may be done, but they are not the formal purpose described in the standard. Instead, performance evaluation ensures the ISMS continues to meet intended outcomes and supports continual improvement.

Thus, the verified purpose is A: To evaluate information security performance.

### NEW QUESTION # 17

Which of the following is required to be considered when selecting appropriate information security risk treatment options?

- A. Criteria for accepting identified risks
- B. Criteria for performing risk assessments
- C. Only risk controls in ISO/IEC 27002
- D. Only risk controls in Annex A of ISO/IEC 27001

**Answer: A**

Explanation:

Clause 6.1.3 (c) requires organizations to:

"compare the controls determined in 6.1.3 b) with those in Annex A and verify that no necessary control has been omitted; and prepare a Statement of Applicability." It also requires organizations to select risk treatment options considering "the organization's risk acceptance criteria." This shows that risk acceptance criteria are a fundamental factor when selecting risk treatment options.

Options C and D are incorrect because Annex A and ISO/IEC 27002 are reference sets, not the sole sources of controls - organizations can design their own. Criteria for performing risk assessments (B) are part of 6.1.2 (risk assessment process), not risk treatment.
