Splunk Enterprise Certified Admin certification is valid for two years and must be renewed through continuing education and professional development.

Splunk Enterprise Certified Admin Sample Questions (Q92-Q97):

NEW QUESTION # 92

What is the valid option for a [monitor] stanza in inputs.conf?

- A. server_name
- B. datasource
- C. enabled
- D. ignoreOlderThan

Answer: D

Explanation:

Setting: ignoreOlderThan = <time_window> Description: "Causes the input to stop checking files for updates if the file modification time has passed the <time_window> threshold." Default: 0 (disabled) Reference:

<https://docs.splunk.com/Documentation/Splunk/8.0.5/Data/Monitorfilesanddirectorieswithinputs.conf>

NEW QUESTION # 93

What is a role in Splunk? (select all that apply)

- A. A classification that determines what indexes a user can search.
- B. A classification that determines what capabilities a user has.
- C. A classification that determines if a Splunk server can remotely control another Splunk server.
- D. A classification that determines what functions a Splunk server controls.

Answer: A,B

Explanation:

Explanation

A role in Splunk is a classification that determines what capabilities and indexes a user has. A capability is a permission to perform a specific action or access a specific feature on the Splunk platform. An index is a collection of data that Splunk software processes and stores. By assigning roles to users, you can control what they can do and what data they can access on the Splunk platform. Therefore, the correct answers are A and D. A role in Splunk determines what capabilities and indexes a user has. Option B is incorrect because Splunk servers do not use roles to remotely control each other. Option C is incorrect because Splunk servers use instances and components to determine what functions they control.

NEW QUESTION # 94

What event-processing pipelines are used to process data for indexing? (select all that apply)

- A. Indexing pipeline
- B. Typing pipeline
- C. fifo pipeline
- D. Parsing pipeline

Answer: A,D

Explanation:

Explanation

The indexing pipeline and the parsing pipeline are the two pipelines that are responsible for transforming the raw data into events and

preparing them for indexing. The indexing pipeline applies index-time settings, such as timestamp extraction, line breaking, host extraction, and source type recognition. The parsing pipeline applies parsing settings, such as field extraction, event segmentation, and event annotation.

NEW QUESTION # 95

What action is required to enable forwarder management in Splunk Web?

- A. Create a server class and map it to a client in `SPLUNK_HOME/etc/system/local/serverclass.conf`.
- B. Navigate to Settings > Server Settings > General Settings, and set an App server port.
- C. Place an app in the `SPLUNK_HOME/etc/deployment-apps` directory of the deployment server.
- D. Navigate to Settings > Forwarding and receiving, and click on Enable Forwarding.

Answer: A

NEW QUESTION # 96

What is a role in Splunk? (select all that apply)

- A. A classification that determines what indexes a user can search.
- B. A classification that determines what capabilities a user has.
- C. A classification that determines if a Splunk server can remotely control another Splunk server.
- D. A classification that determines what functions a Splunk server controls.

Answer: A,B

Explanation:

A role in Splunk is a classification that determines what capabilities and indexes a user has. A capability is a permission to perform a specific action or access a specific feature on the Splunk platform¹. An index is a collection of data that Splunk software processes and stores². By assigning roles to users, you can control what they can do and what data they can access on the Splunk platform. Therefore, the correct answers are A and D. A role in Splunk determines what capabilities and indexes a user has. Option B is incorrect because Splunk servers do not use roles to remotely control each other. Option C is incorrect because Splunk servers use instances and components to determine what functions they control³.
