Three versions of Portworx-Enterprise-Professional exam guide are available on our test platform, including PDF version, PC version and APP online version. As a consequence, you are able to study the online test engine of Portworx-Enterprise-Professional study materials by your cellphone or computer, and you can even study Portworx-Enterprise-Professional Actual Exam at your home, company or on the subway whether you are a rookie or a veteran, you can make full use of your fragmentation time in a highly-efficient way to study with our Portworx-Enterprise-Professional exam questions and pass the Portworx-Enterprise-Professional exam.

Pure Storage Portworx-Enterprise-Professional Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Operations and Administration: This section of the exam measures the skills of Storage Administrators and Kubernetes Operators and covers managing cluster operations and administering container storage environments using Portworx. Candidates demonstrate the ability to efficiently manage and operate storage clusters in production environments.
Topic 2	<ul style="list-style-type: none">• Observability and Troubleshooting: This section assesses the expertise of Support Engineers and System Administrators in monitoring storage deployments and troubleshooting issues. Candidates learn to use observability tools and techniques to maintain system health and resolve performance problems effectively.
Topic 3	<ul style="list-style-type: none">• Deploy and Install: This domain targets DevOps Engineers and Infrastructure Specialists and focuses on deploying and installing Portworx storage solutions. It includes configuring and setting up storage clusters to support containerized applications reliably and securely.
Topic 4	<ul style="list-style-type: none">• Security: This section focuses on Security Engineers and Compliance Officers responsible for enforcing security measures in container storage environments. Topics include managing encryption, access control, and compliance policies to protect stored data.
Topic 5	<ul style="list-style-type: none">• Business Continuity: This domain measures the skills of Disaster Recovery Planners and IT Continuity Managers in implementing backup, recovery, and failover strategies. It ensures candidates understand how to sustain business operations and data availability using Portworx features.

Pure Storage Portworx-Enterprise-Professional Test Prep & Valid Portworx-Enterprise-Professional Exam Tutorial

The beauty of life may be that we don't know what will happen in the future, but even so, we are willing to pursue a bright future. Happiness for us may be the life we want to live, and our Portworx-Enterprise-Professional Study Materials can provide a good foundation for you to achieve this goal. A good job requires good skills, and the most intuitive way to measure your ability is how many qualifications you have passed and how many qualifications you have.

Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam Sample Questions (Q17-Q22):

NEW QUESTION # 17

An infrastructure admin wants to restrict installing Portworx on two nodes. What label does the node need to have?

- A. px/service=stop
- B. px/enabled=false
- C. px/storage-node=false

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx uses node labeling as a mechanism to control on which Kubernetes nodes Portworx is installed and allowed to operate. To restrict Portworx installation on specific nodes, those nodes should be labeled with px/enabled=false. This label tells the Portworx Operator or installation scripts to exclude these nodes from Portworx deployment, preventing Portworx daemons from running there. This feature is useful for reserving nodes for non-storage workloads or avoiding unsupported hardware. Labels like px/service=stop or px/storage-node=false are not recognized by Portworx as controls for installation exclusion. The official Portworx deployment and node labeling documentation specify px/enabled=false as the standard method for controlling node participation in the storage cluster, offering administrators fine-grained control over cluster topology and resource allocation **【 Pure Storage Portworx Deployment Guide source 】** .

NEW QUESTION # 18

When upgrading Portworx on Kubernetes using the Operator, what step must the administrator take if using the px-versions configmap?

- A. Create a new namespace for the configmap.
- B. Update the version manifest.
- C. Delete the existing configmap.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

During Portworx upgrades via the Kubernetes Operator, if the deployment uses a px-versions ConfigMap to manage available Portworx versions, the administrator must update the version manifest within this ConfigMap to include the new version. This update informs the Operator of the target version for upgrades and ensures that the correct container images are pulled and deployed. Simply creating a new namespace or deleting the ConfigMap is insufficient and can cause upgrade failures or inconsistent version deployments. The Portworx Operator upgrade documentation emphasizes updating the px-versions ConfigMap manifest as a necessary step in orchestrated upgrades, enabling controlled, predictable version management within Kubernetes clusters **【 Pure Storage Portworx Upgrade Guide source 】** .

NEW QUESTION # 19

Which storage type does Portworx primarily rely on for storage provisioning?

- A. Network File System (NFS)
- B. Object Storage
- C. Direct Attached Storage (DAS)

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx primarily relies on Direct Attached Storage (DAS) for its storage provisioning. DAS refers to physical disks or SSDs directly connected to the nodes running Portworx. Using DAS enables high-performance, low-latency access to storage resources, crucial for stateful containerized applications. Portworx aggregates and abstracts these local devices into distributed storage pools, providing features like replication, encryption, and snapshots. While Portworx integrates with Object Storage for cloud snapshots and disaster recovery, and can support NFS for certain use cases, the core storage provisioning and volume management depend on DAS. The Portworx architecture documentation clarifies that leveraging local node storage is essential for delivering performant, resilient, and scalable persistent storage in Kubernetes environments **【Pure Storage Portworx Architecture Guide source】** .

NEW QUESTION # 20

Which flag in the Portworx StorageCluster spec enables telemetry?

- A. `spec.autopilot.enabled`
- B. `spec.csi.enabled`
- C. `spec.telemetry.enabled`

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Telemetry in Portworx refers to the automated collection and reporting of cluster performance and health metrics to Pure1 or other monitoring services. To enable telemetry, the `spec.telemetry.enabled` flag must be set to true in the StorageCluster Custom Resource Definition (CRD). This setting activates the telemetry pod on each node, which collects data such as resource usage, storage capacity, and errors, then securely uploads it to Pure Storage's management platform. Enabling telemetry helps administrators gain insights into cluster performance trends, preemptively identify issues, and optimize resource utilization. The Portworx operator respects this flag during installation and upgrades to ensure telemetry is consistently configured. Neither `spec.autopilot.enabled` (which controls the Autopilot feature) nor `spec.csi.enabled` (which controls CSI driver deployment) affects telemetry settings. Official Portworx documentation highlights this flag as critical for activating health monitoring and analytics features within Portworx clusters **【Pure Storage Portworx Telemetry Guide source】** .

NEW QUESTION # 21

What label can be used to migrate Network Policies with Asynchronous DR?

- A. `skipNetworkPolicyCheck: false`
- B. `skipNetworkPolicyCheck: true`
- C. By default Network policies are migrated

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

When using Portworx Asynchronous Disaster Recovery (DR) to migrate workloads and storage across clusters, network policies can sometimes interfere with seamless failover. The label `skipNetworkPolicyCheck: true` can be used to instruct the DR mechanism to bypass strict network policy checks during migration. This allows applications and volumes to migrate even if network policies differ or are incompatible between source and destination clusters. Without this label, migration might be blocked or fail due to network restrictions. By default, network policies are not always migrated, and strict checks are performed unless explicitly skipped. Portworx DR documentation details this option as a means to increase migration flexibility, reduce operational friction, and enable faster recovery during disaster scenarios while administrators work on aligning network configurations **【Pure Storage Portworx DR Guide source】** .

NEW QUESTION # 22

.....

Many exam candidates feel hampered by the shortage of effective Portworx-Enterprise-Professional practice materials, and the thick books and similar materials causing burden for you. Serving as indispensable choices on your way of achieving success especially during this exam, more than 98 percent of candidates pass the exam with our Portworx-Enterprise-Professional practice materials and all of former candidates made measurable advance and improvement. All Portworx-Enterprise-Professional practice materials

fall within the scope of this exam for your information.
