

# RVT\_ELEC\_01101 Test Answers | Sound for Autodesk Certified Professional in Revit for Electrical Design

P.S. Free & New RVT\_ELEC\_01101 dumps are available on Google Drive shared by SureTorrent: [https://drive.google.com/open?id=1bUQdpilk8l6sCVWiNCawuyyb\\_t1Ng2E](https://drive.google.com/open?id=1bUQdpilk8l6sCVWiNCawuyyb_t1Ng2E)

If you want to pass your exam just one time, then we will be your best choice. RVT\_ELEC\_01101 questions and answers are edited by professional experts, and they have the professional knowledge in this field, therefore RVT\_ELEC\_01101 exam materials are high-quality. In addition, RVT\_ELEC\_01101 training materials contain most of the knowledge point for the exam, and you can have a good command of the exam dumps as well as improve your professional ability in the process of learning. You can also obtain the download link and password within ten minutes for RVT\_ELEC\_01101 Exam Dumps, so you can start your learning immediately.

The Autodesk RVT\_ELEC\_01101 certification exam offers a great opportunity to advance your career. With the Autodesk Certified Professional in Revit for Electrical Design certification exam beginners and experienced professionals can demonstrate their expertise and knowledge. After passing the Autodesk Certified Professional in Revit for Electrical Design (RVT\_ELEC\_01101) exam you can stand out in a crowded job market. The Autodesk Certified Professional in Revit for Electrical Design (RVT\_ELEC\_01101) certification exam shows that you have taken the time and effort to learn the necessary skills and have met the standards in the market.

## **Valid RVT\_ELEC\_01101 prep4sure vce & Autodesk RVT\_ELEC\_01101 dumps pdf & RVT\_ELEC\_01101 latest dumps**

Our RVT\_ELEC\_01101 Exams preparation software allows you to do self-assessment. If you have prepared for the RVT\_ELEC\_01101 exam, you will be able to assess your preparation with our preparation software. The software provides you the real feel of an exam, and it will ensure 100% success rate as well. You can test your skills in real exam like environment. If you are not getting the desired results, you will get 100% money back guarantee on all of our exam products.

## **Autodesk Certified Professional in Revit for Electrical Design Sample**

## Questions (Q11-Q16):

### NEW QUESTION # 11

An electrical designer needs to check for Interferences between conduit in the host model and beams in a linked structure model in the Interference Check dialog, select the items that the designer must select to perform the interference check. (Select two.)

**Answer:**

Explanation:

### NEW QUESTION # 12

Refer to exhibits.

(The image Is presented in Imperial units: 1 In = 25 mm (Metric units rounded].) An electrical designer creates a lighting fixture family with the following types and then saves the family.

- A. 0
- **B. 1**
- C. 2
- D. 3

**Answer: B**

Explanation:

In Autodesk Revit, each type within a family represents a unique combination of parameters such as size, voltage, photometric properties, and construction configuration. When a family is created in the Family Editor, the designer can define multiple Family Types using the Family Types dialog. This interface allows the user to duplicate, rename, or modify type parameters before loading the family into a project.

In the exhibit, the Type Name dropdown list clearly shows two available lighting fixture types:

1x4 - 120

1x4 - 277

These two types appear to represent different voltage configurations of the same 1x4 light fixture format. Since these are the only types visible in the Family Types selection preview, the correct number of family types saved within the family file is two.

Revit's behavior aligns with standard family management described in documentation, which explains that every defined type is listed in the Family Types browser. When a designer saves a family, all defined types are stored and become available for placement in the project environment. Devices can then be selected based on parameters such as voltage or photometric values, which are often driven by electrical design requirements.

The Revit MEP User's Guide explains how type properties and family types are controlled:

"Selection of named items or elements [such as Family Types] are managed through the Properties and Family Types dialogs, allowing multiple variations to exist within a single family."

### NEW QUESTION # 13

Which Revit command is used to map a Keynote Table file?

- **A. Keynoting Settings**
- B. Keynote Legend
- C. Element Keynote
- D. Keynote Manager

**Answer: A**

Explanation:

The correct command in Revit used to map (assign or browse to) a Keynote Table file is Keynoting Settings.

In Revit, keynotes are driven by an external keynote table, typically a tab-delimited TXT file that must be assigned (mapped) in the project so keynote tags can read values correctly. The official Autodesk Revit MEP documentation clearly identifies that the Keynoting Settings dialog is where this mapping is performed.

From the documentation:

To access the Keynoting Settings dialog, the instructions state:

"click Annotate tab ➤ Tag panel drop-down ➤ (Keynoting Settings)."

Regarding keynote table file location mapping:

"Keynote Table - Full Path displays the entire path of the keynote file... Saved Path displays the file name of the keynote file that is loaded." It goes further to explain file path types:

"Absolute identifies a specific folder... Relative finds the keynote file where the project file... is located... At Library Locations finds the keynote file where the stand-alone installation or network deployment specified." The command is explicitly referenced again when fixing a missing mapping:

"Unable to Load Keynote data. Check keynote table locations in Keynoting Settings."

"To specify the location of the keynote text file... click (Keynoting Settings)." Other listed options do not perform keynote file mapping:

Keynote Manager does not exist as a command in native Revit.

Element Keynote is a tagging method.

Keynote Legend only displays already-mapped keynote information.

## NEW QUESTION # 14

Which condition applies when placing a ceiling-hosted light fixture?

- A. The light must be placed in the same model as the ceiling
- B. The light must be defined in the ceiling layout pattern.
- C. The light must be hosted to the ceiling reference plane.
- D. The light must be snapped to the ceiling using nodes.

**Answer: A**

Explanation:

According to Autodesk's Revit MEP User's Guide (Revit MEP 2011, Chapter 17 "Electrical Systems"), lighting fixtures in Revit are hosted components—this means they rely on another model element (like a wall, ceiling, or floor) to exist. Specifically, ceiling-hosted lighting fixtures must be placed on a ceiling element that is within the same model file in which the light is being placed.

From the document:

"Most lighting fixtures are hosted components that must be placed on a host component (a ceiling or wall). To place a lighting fixture in a view:

In the Project Browser, expand Views (all) > Floor Plans, and double-click the view where you want to place the lighting fixture. Click Home tab > Electrical panel > Lighting Fixture.

In the Type Selector, select a fixture type.

On the ribbon, verify that Tag on Placement is selected to automatically tag the fixture.

Move the cursor over the drawing area.

The lighting fixture is previewed as you move the cursor over a valid host or location in the drawing area.

Click to place the lighting fixture."

- Revit MEP User's Guide, Chapter 17: Electrical Systems, p. 402

Additionally, in the Rendering section of the same guide, Autodesk clearly defines hosting relationships in lighting fixture templates: "The names of all lighting fixture templates include the words Lighting Fixture. Be sure to select the appropriate template for the type of lighting fixture that you want to create. For example, to create a ceiling-based fixture for metric projects, use Metric Lighting Fixture ceiling based.rft.

Revit MEP opens the Family Editor. The template defines reference planes and a light source. For ceiling-based and wall-based fixtures, the template includes a ceiling or wall to host the fixture."

- Revit MEP User's Guide, Chapter 50: Rendering, p. 1148

This indicates that the ceiling host must physically exist within the same model environment. If the ceiling is part of a linked architectural model, the lighting fixture cannot attach to it directly because Revit does not allow cross-model hosting. In such cases, a work plane-based or face-based light family must be used instead.

Therefore, among the given options:

A (snapping using nodes) and B (hosted to a ceiling reference plane) are partial actions within a placement workflow, not hosting conditions.

C (defined in the ceiling layout pattern) is incorrect because pattern layout does not determine hosting.

D (placed in the same model as the ceiling) is correct since Revit requires the ceiling host and the light fixture to exist in the same project file for the hosting relationship to function.

Verified Reference Extracts from Revit for Electrical Design Documentation:

Autodesk Revit MEP User's Guide (2011), Chapter 17: Electrical Systems, p. 402 - "Most lighting fixtures are hosted components that must be placed on a host component (a ceiling or wall)." Autodesk Revit MEP User's Guide (2011), Chapter 50: Rendering, p. 1148 - "For ceiling-based and wall-based fixtures, the template includes a ceiling or wall to host the fixture." Revit MEP Family Templates Description - Metric Lighting Fixture ceiling based.rft defines the ceiling as the hosting reference within the same model environment.

## NEW QUESTION # 15

An electrical designer is creating a panelboard family. The electrical designer wants to create a family parameter to control the visibility of a clearance zone. In the Parameter Properties dialog, select the required Discipline and Type for the parameter.

**Answer:**

Explanation:

## NEW QUESTION # 16

.....

With the advent of the era of big data, data information bringing convenience to our life at the same time, the problem of personal information leakage has become increasingly prominent. For preventing information leakage, our RVT\_ELEC\_01101 test torrent will provide the date protection for all customers. It is not necessary for you to be anxious about your information gained by the third party. At the same time, the versions of our Autodesk Certified Professional in Revit for Electrical Design exam tool also have the ability to help you ward off network intrusion and attacks and protect users' network security. If you choose our RVT\_ELEC\_01101 Study Materials, we can promise that we must enhance the safety guarantee and keep your information from revealing.
