Fortinet EMEA Advanced Support Exam Sample Questions (Q27-Q32):

NEW QUESTION # 27

Which of the following is a benefit of using FortiGate's Security Fabric?

- A. It enables centralized management of multiple Fortinet devices
- B. It increases the speed of IPsec VPN tunnels
- C. It automatically configures VLANs on FortiSwitches
- D. It reduces the need for firewall policies

Answer: A

Explanation:

The Fortinet Security Fabric provides a centralized management platform for multiple Fortinet devices (e.g., FortiGate, FortiSwitch, FortiAP), enabling coordinated security policies, telemetry sharing, and simplified administration. It does not directly speed up VPNs (B), reduce firewall policies (C), or auto-configure VLANs (D). Exact extract: "The Fortinet Security Fabric enables centralized management and visibility across Fortinet devices, allowing coordinated security policies and telemetry sharing for enhanced protection."

NEW QUESTION # 28

In a FortiGate high availability (HA) cluster, what happens if the primary unit fails?

- A. Traffic is rerouted through an external gateway
- B. The cluster switches to active-passive mode
- C. The cluster is disabled, and traffic stops
- **D. A secondary unit takes over as the primary unit**

Answer: D

Explanation:

In a FortiGate HA cluster (active-active or active-passive), if the primary unit fails, a secondary unit automatically takes over as the primary, ensuring continuity of traffic with minimal disruption. Option A is incorrect as traffic continues, C is incorrect as the mode doesn't change post-failure, and D is unrelated. Exact extract: "In a FortiGate HA cluster, if the primary unit fails, a secondary unit is elected as the new primary, taking over all roles to maintain traffic flow and session continuity."

NEW QUESTION # 29

Which protocol is used by FortiGate to synchronize session tables in an HA cluster?

- A. OSPF
- B. BGP
- **C. FGCP**
- D. VRRP

Answer: C

Explanation:

The FortiGate Cluster Protocol (FGCP) is used to synchronize session tables, configuration, and state information between HA cluster members to ensure seamless failover. VRRP (B) is for router redundancy, OSPF (C) and BGP (D) are routing protocols, not used for HA synchronization. Exact extract: "FGCP synchronizes session tables, configurations, and state information between FortiGate HA cluster members to ensure continuity during failover."

NEW QUESTION # 30

In VMware vSphere, the term VMotion refers to

- **A. A zero downtime live migration of workloads from one server to another**
- B. The streaming of high definition video on a virtual machine
- C. The process used to describe the movement of hard drive platters on a virtual machine
- D. The patented technology available to migrate a server from Hyper-V to VMware

Answer: A

Explanation:

VMotion in VMware vSphere enables live migration of running virtual machines from one physical server to another with zero downtime, ensuring continuous operation. Fortinet's FortiGate-VM supports such environments. Options A, C, and D are incorrect as they do not describe VMotion; C refers to a different migration scenario, and D is unrelated to virtualization. Exact extract: "VMotion allows the live migration of a running virtual machine from one physical server to another with no downtime... This ensures workloads continue running during server maintenance or load balancing."

NEW QUESTION # 31

Which term refers to the OSPF router that connects area 0 to a nonbackbone area?

- A. backbone router
- B. autonomous system boundary router
- C. area boundary router
- **D. area border router**

Answer: D

Explanation:

The standard term in OSPF for a router connecting the backbone area (Area 0) to a non-backbone area is "area border router" (ABR). It maintains separate LSDBs for each area and performs summarization. "Area boundary router" is similar but not the standard term; ASBR connects to external AS; backbone router is in Area 0. Exact extract: Go to Network > OSPF. Set Router ID to 10.11.101.1. In the Areas table, click Create New and set the following: Area ID. 0.0. Click OK. In the Networks ... A router connected to more than one area is an area border router (ABR). An autonomous system boundary router (ASBR) is located between an OSPF autonomous ... This article describes the basic steps to configure FortiGates in an OSPF scenario where the FortiGates will be ABR and ASBR OSPF routers across 3 areas. OSPF areas are groupings of OSPF routers or logical parts of a network. An area's routing information can be sent as a summary to other areas. This article describes that routes learned from the other OSPF areas will be removed on the ABR router when it has multiple areas and has no backbone ...
