

# AAISM New Braindumps | Valid AAISM Test Forum

2025 Latest TestInsides AAISM PDF Dumps and AAISM Exam Engine Free Share: [https://drive.google.com/open?id=1bp2qw1TY\\_GWc8XqSkrpiUIHa9tveruSe](https://drive.google.com/open?id=1bp2qw1TY_GWc8XqSkrpiUIHa9tveruSe)

TestInsides provides a high-quality ISACA Advanced in AI Security Management (AAISM) Exam AAISM practice exam. The best feature of the ISACA AAISM exam dumps is that they are available in PDF and a web-based test format. They both distinguish ISACA from competing products. Visit ISACA and purchase your ISACA AAISM and Supply exam product to start studying for the AAISM exam.

our company made our AAISM practice guide with accountability. Our AAISM training dumps are made by our AAISM exam questions responsible company which means you can gain many other benefits as well. We offer free demos of our for your reference, and send you the new updates if our experts make them freely. What is more, we give some favorable discount on our AAISM Study Materials from time to time, which mean that you can have more preferable price to buy our products.

>> AAISM New Braindumps <<

## Valid AAISM Test Forum & Valid Exam AAISM Registration

Our online resources and events enable you to focus on learning just what you want on your timeframe. You get access to every AAISM exams files and there continuously update our AAISM Study Materials; these exam updates are supplied free of charge to our valued customers. Get the best AAISM exam Training; as you study from our exam-files.

## ISACA Advanced in AI Security Management (AAISM) Exam Sample Questions (Q22-Q27):

### NEW QUESTION # 22

When integrating AI for innovation, which of the following can BEST help an organization manage security risk?

- A. Re-evaluating the risk appetite
- **B. Adopting a phased approach**
- C. Seeking third-party advice
- D. Evaluating compliance requirements

**Answer: B**

Explanation:

AAISM emphasizes that when introducing innovative AI systems, organizations reduce security and compliance risk by following a phased adoption approach. This allows incremental deployment, controlled testing, and gradual scaling while monitoring risks in real time. Re-evaluating risk appetite and evaluating compliance are important governance steps but do not directly mitigate risks during implementation. Seeking third-party advice can add expertise but does not provide the structured control that phased integration offers.

The most effective risk management approach for AI innovation is to adopt a phased rollout strategy.

### NEW QUESTION # 23

Which of the following involves documenting and monitoring the complete journey of data as it flows through an AI system?

- A. Origin
- B. Processing
- C. Transformation
- **D. Lineage**

**Answer: D**

Explanation:

Data lineage records and monitors the end-to-end journey of data-sources, movements, transformations, storage locations, uses, and dependencies-providing traceability, auditability, and accountability across the AI lifecycle. "Origin" is a single point (provenance), "transformation" is one step within the flow, and "processing" is a general activity rather than a governance record of the entire path.

### NEW QUESTION # 24

An organization is implementing an AI-based credit assessment engine using internal and third-party customer data. Which of the following BEST aligns with data management controls for the AI life cycle?

- **A. Documented procedures for data sourcing, lineage tracking, and quality validation**
- B. Use of hashed identifiers to anonymize datasets used for model validation and internal analytics
- C. Limitation of model training to structured data from vetted sources to minimize ingestion risk
- D. Encrypted isolation and dynamic access controls on training data pipelines

**Answer: A**

Explanation:

The strongest alignment with AI life-cycle data management controls is establishing documented procedures for data sourcing, lineage tracking, and quality validation. Governance requires end-to-end data controls- provenance, consent, sourcing approvals, lineage, quality checks, labeling standards, retention, and auditability-so models are trained and validated on trustworthy, compliant data. Hashing alone is pseudo- anonymization and does not deliver full governance. Restricting to structured data is an implementation constraint, not a control set. Encryption and access control protect confidentiality/availability but do not ensure lineage or quality.

Evidence; Quality Gates and Approval Workflows.

#### NEW QUESTION # 25

Which of the following should be done FIRST when developing an acceptable use policy for generative AI?

- **A. Determine the scope and intended use of AI**
- B. Review existing company policies
- C. Consult with risk management and legal
- D. Review AI regulatory requirements

**Answer: A**

Explanation:

According to the AAISM framework, the first step in drafting an acceptable use policy is defining the scope and intended use of the AI system. This ensures that governance, regulatory considerations, risk assessments, and alignment with organizational policies are all tailored to the specific applications and functions the AI will serve. Once scope and intended use are clearly defined, legal, regulatory, and risk considerations can be systematically applied. Without this step, policies risk being generic and misaligned with business objectives.

#### NEW QUESTION # 26

Which of the following security framework elements BEST helps to safeguard the integrity of outputs generated by AI algorithms?

- A. Management is prepared to disclose AI system architecture to stakeholders
- B. Responsibility is defined for legal actions related to AI regulatory requirements
- C. Ethical standards are incorporated into security awareness programs
- **D. Risk exposure due to bias in AI outputs is kept within an acceptable range**

**Answer: D**

Explanation:

According to AAISM technical controls, the element of security frameworks that directly safeguards output integrity is ensuring that bias-related risks are maintained within acceptable ranges. This ensures that AI results remain consistent, fair, and reliable, preserving trust in outputs. Ethical awareness, architectural disclosure, and legal responsibilities are governance practices but do not directly secure output integrity.

Output integrity is primarily protected through bias management and ongoing evaluation of fairness and accuracy.
