Salesforce Certified Experience Cloud Consultant Sample Questions (Q34-Q39):

NEW QUESTION # 34

Northern trail Outfitters has created a microsite digital experience for its Gold-Level VIP customers. The digital experience is not yet active.

The community manager would like to send welcome emails on a specific day, which include a promotion for participating in the community.

In which order should the community manager perform activation steps?

- A. Set the Community to Active, and available profiles and permission sets to the Admin Workspace, enable Contacts as community users, and set welcome emails to Enabled.
- B. Publish the community, which will send out the welcome emails.

- C. Add available profiles and permission sets to the Admin Workspace, enable Contacts as community users, set welcome emails to Enabled, and set the community to Active.
- D. Set the community to Active, and available profiles and permission sets to the Admin Workspace, and create a process to send the welcome emails.

Answer: C

Explanation:

The order in which the community manager should perform activation steps is A. To activate a site in Experience Cloud, you need to complete several steps, such as adding profiles and permission sets, enabling contacts as community users, setting welcome emails, and setting the site to active. The order of these steps is important, because some steps depend on others. For example, you need to add profiles and permission sets before you can enable contacts as community users, and you need to set welcome emails before you can set the site to active.

NEW QUESTION # 35

Cloud Kicks (CK) wants to create a public site to recruit potential volunteers. Volunteering events are stored in a custom VolunteeringEvent object.

How can CK give guest users access to a custom object?

- A. Through guest user roles
- B. Through guest user Sharing Rules
- C. Through guest user organization-wide defaults (OWD)
- D. Through guest user Sharing Sets

Answer: C

Explanation:

To give guest users access to a custom object, CK can use guest user organization-wide defaults (OWD).

OWD are a feature that allows you to set the default level of access that guest users have to records of a custom object. You can use OWD to grant Read Only or Read/Write access to guest users for a custom object.

For example, CK can use OWD to give guest users Read Only access to the VolunteeringEvent object.

NEW QUESTION # 36

Cloud Kicks has packaged its Customer Support Community. The community includes navigation menu items that link to standard and custom objects.

Which two points should the Experience Cloud consultant consider when reviewing the package? Choose 2 answers

- A. Custom list views for custom objects are included as dependencies.
- B. Custom list views for custom objects are not included as dependencies.
- C. Custom list views for standard objects are not included as dependencies.
- D. Custom list views for standard objects are included as dependencies.

Answer: B,C

Explanation:

When you package your Experience Cloud site, some components and settings are included as dependencies, while others are not.

For example:

* Custom list views for custom objects are not included as dependencies. You need to manually add them to your package or recreate them in the target org.

* Custom list views for standard objects are not included as dependencies. You need to manually add them to your package or recreate them in the target org.

NEW QUESTION # 37

Universal Containers (UC) has a B2C customer department that uses person accounts to track and manage all B2C customers. UC has set up a B2C site using Salesforce Experience Cloud. The VP of B2C business wants to enable self-registration on the portal so customers can create their own user accounts.

What should the Experience Cloud consultant at UC recommend so that the new users self-registering on the B2C site are captured as person accounts in Salesforce?

- A. Create a custom self-registration page and Apex handler that creates a person account for each user self-registering on the portal.
- B. Restrict the Account record type access to Person Account record type only for the Site Guest User, so any account created is by default a person account.
- C. Use the standard self-registration configuration under Experience Workspace and leave the default Account field empty.

Answer: A

Explanation:

This option allows UC to customize the self-registration process and create person accounts programmatically using Apex code. The standard self-registration configuration does not support person accounts and requires an existing business account to associate the new users with. Restricting the account record type access for the Site Guest User does not affect the self-registration process and may cause errors.

NEW QUESTION # 38

Which component inform support agents working in the Service Console what actions a customer has taken on an Experience site?

- A. Customer Insights
- B. Einstein Customer
- C. Experience Tracker
- D. Community View

Answer: C

Explanation:

Experience Tracker is a component that informs support agents working in the Service Console what actions a customer has taken on an Experience site. Experience Tracker shows information such as page views, searches, downloads, and case interactions that the customer has performed on the site. This helps agents understand the customer's context and provide better service.

NEW QUESTION # 39

.....

Perhaps the path to successful pass the EX-Con-101 is filled variables, but now there is only one possibility to successfully obtain a EX-Con-101 certification.
