Reasonable ITIL-4-Practitioner-Deployment-Management Exam Price, ITIL-4-Practitioner-Deployment-Management Real Exam

In this age of anxiety, everyone seems to have great pressure. If you are better, you will have a more relaxed life. ITIL-4-Practitioner-Deployment-Management guide materials allow you to increase the efficiency of your work. You can spend more time doing other things. Our ITIL-4-Practitioner-Deployment-Management study questions allow you to pass the exam in the shortest possible time. Just study with our ITIL-4-Practitioner-Deployment-Management exam braindumps 20 to 30 hours, and you will be able to pass the exam.

Our ITIL-4-Practitioner-Deployment-Management study guide has PDF, Software/PC, and App/Online three modes. You can use scattered time to learn whether you are at home, in the company, or on the road. At the same time, the contents of ITIL-4-Practitioner-Deployment-Management learning test are carefully compiled by the experts according to the content of the examination syllabus of the calendar year. With our ITIL-4-Practitioner-Deployment-Management Study Materials, you only need to spend 20 to 30 hours to practice before you take the ITIL-4-Practitioner-Deployment-Management test, and have a high pass rate of 98% to 100%.

>> Reasonable ITIL-4-Practitioner-Deployment-Management Exam Price <<

Free PDF High-quality Peoplecert - ITIL-4-Practitioner-Deployment-Management - Reasonable ITIL 4 Practitioner: Deployment Management Exam Price

The ITIL-4-Practitioner-Deployment-Management software supports the MS operating system and can simulate the real test environment. In addition, the ITIL-4-Practitioner-Deployment-Management software has a variety of self-learning and self-assessment functions to test learning outcome, which will help you increase confidence to pass exam. The contents of the three versions are the same. Each of them neither limits the number of devices used or the number of users at the same time. You can choose according to your needs. ITIL-4-Practitioner-Deployment-Management Study Materials provide 365 days of free updates, you do not have to worry about what you missed.

Peoplecert ITIL-4-Practitioner-Deployment-Management Exam Syllabus Topics:

Topic	Details
Topic 1	• Roles and competencies: This section of the exam measures the skills of a Change Implementation Lead and focuses on identifying essential roles within Deployment Management and the competencies needed to perform them effectively. It explores how to position deployment responsibilities within an organization and what skill sets are necessary to ensure deployment tasks are carried out successfully.
Topic 2	• Partners and suppliers: This section of the exam measures the skills of a Change Implementation Lead and examines the influence of partners and suppliers in the deployment process. It highlights the importance of effective collaboration and communication with external stakeholders to ensure that deployments are delivered according to expectations and with minimal risks.
Topic 3	• The ITIL Capability model: This section of the exam measures the skills of a Service Transition Manager and introduces how capability criteria contribute to developing and maturing Deployment Management practices. It focuses on aligning organizational capabilities with ITIL best practices to maintain consistency, quality, and effectiveness in service transitions.
Topic 4	• Practice processes: This section of the exam measures the skills of a Service Transition Manager and delves into the key processes that shape Deployment Management. It outlines how these processes and activities can be aligned with the organization's value stream to ensure that deployments are well-planned, coordinated, and delivered without disrupting existing services.
Topic 5	• Key concepts: This section of the exam measures the skills of a Service Transition Manager and covers the fundamental purpose of Deployment Management. It highlights why the structured management of service deployment is crucial for delivering new or modified services into the live environment efficiently while minimizing disruption and ensuring continuity in business operations.
Topic 6	• Practice success factors: This section of the exam measures the skills of a Change Implementation Lead and focuses on understanding practice success factors and the core metrics used to evaluate deployment effectiveness. It emphasizes the importance of tracking efficiency and success in service deployment and how these metrics help improve the overall stability and agility of the service transition process.
Topic 7	• Practice success: This section of the exam measures the skills of a Change Implementation Lead and explains how to achieve success with Deployment Management through the application of ITIL guiding principles. It focuses on strategies that help establish a robust and value-driven deployment approach that aligns with business objectives and delivers measurable outcomes.

Peoplecert ITIL 4 Practitioner: Deployment Management Sample Questions (Q19-Q24):

NEW QUESTION # 19
[Use Tools and Techniques for Deployment]
An organization is facing errors and delays when deploying software. An investigation has shown that these are often caused by the need for unplanned manual configuration of the target environments. What is the BEST recommendation for the organization to improve the success rate of deployments?

- A. Automate the CI/CD pipeline
- B. Integrate build, test, and deployment activities
- C. Use incremental deployments
- D. Leverage Infrastructure as Code

Answer: D

Explanation:
The issue of errors and delays due to unplanned manual configuration of target environments points to inconsistent or poorly managed environments. ITIL 4 recommends leveraging Infrastructure as Code (IaC) (Option A) to address this, as IaC automates and standardizes environment provisioning, ensuring consistency and reducing manual errors.
Option A (Leverage Infrastructure as Code): Correct, as IaC (e.g., using tools like Terraform or Ansible) defines environments in

code, enabling repeatable, error-free setups and directly addressing the problem of manual configuration errors.
Option B (Use incremental deployments): Incorrect, as incremental deployments focus on releasing smaller changes but do not address the root cause of environment configuration issues.
Option C (Integrate build, test, and deployment activities): Incorrect, as while integration improves pipeline flow, it does not specifically resolve manual configuration errors in target environments.
Option D (Automate the CI/CD pipeline): Incorrect, as automating the pipeline is a broader solution that may include IaC, but it is not specific enough to address the environment configuration issue directly.

NEW QUESTION # 20
[Integrate Deployment Management with Other Practices]
An organization's end users have complained that major software updates happen during work hours, with insufficient notice, and sometimes disrupt users' work for an unacceptably long time. The deployment manager already has close alignment with the release manager and release processes, and has implemented CI/CD. What is the BEST action for the organization to take to ensure new software features are relevant to the end-users?

- A. Use infrastructure as code to support the software deployment
- B. Embed validation and testing within the deployment models
- C. Align with the change enablement manager to improve the change planning procedures
- D. Integrate deployment management and configuration management activities to improve version control

Answer: C

Explanation:
The issue involves poor timing, lack of notice, and disruptions from deployments, which points to deficiencies in change planning and communication. ITIL 4 emphasizes aligning deployment with change enablement to ensure changes are scheduled and communicated effectively, addressing user concerns. Option C, aligning with the change enablement manager to improve change planning procedures, directly tackles these issues by ensuring deployments are timed appropriately, users are informed, and disruptions are minimized, while also ensuring feature relevance through better planning.
Option A (Use infrastructure as code to support the software deployment): Incorrect, as IaC improves environment consistency but does not address scheduling, notice, or user relevance issues.
Option B (Embed validation and testing within the deployment models): Incorrect, as while testing improves quality, it does not resolve timing or communication problems affecting users.
Option C (Align with the change enablement manager to improve the change planning procedures): Correct, as change enablement ensures deployments are planned with user needs in mind, including timing, communication, and relevance of features.
Option D (Integrate deployment management and configuration management activities to improve version control): Incorrect, as version control enhances deployment accuracy but does not address user complaints about timing or disruption.

NEW QUESTION # 21
[Apply Deployment Management Processes]
What key output of the 'deployment model development and improvement' process can be used to trigger implementation of a newly updated deployment model?

- A. Updated knowledge management articles
- B. Deployment review reports
- C. Change request
- D. Lessons learned

Answer: C

Explanation:
In ITIL 4, the deployment model development and improvement process involves creating or refining models to enhance deployment effectiveness. Implementing a newly updated deployment model typically requires formal authorization and coordination, which is achieved through a change request (Option B). A change request initiates the process to assess, approve, and execute the model update in a controlled manner, ensuring alignment with organizational governance and other practices like change enablement.
Option A (Lessons learned): Incorrect, as lessons learned are an output for improving future processes, not a trigger for implementing a new model.
Option B (Change request): Correct, as a change request is the formal mechanism to propose and implement a new or updated deployment model, per ITIL 4's integration with change enablement.
Option C (Updated knowledge management articles): Incorrect, as knowledge articles support documentation and training but do

not trigger implementation.
Option D (Deployment review reports): Incorrect, as review reports provide insights or feedback, not the authorization needed to implement a model.

NEW QUESTION # 22
[Understand the Key Concepts of Deployment Management]
Which is a key feature of continuous deployment which is not found in other CI/CD stages?

- A. It enables users to benefit immediately from changes
- B. It allows individual decisions about software releases
- C. It automatically tests software code
- D. It predominantly uses staging environments

Answer: A

Explanation:
Continuous deployment (CD) in ITIL 4 is the most advanced stage of the CI/CD pipeline, where every validated change is automatically deployed to production without manual intervention. The key feature unique to continuous deployment, not found in continuous integration or continuous delivery, is that it enables users to benefit immediately from changes (Option B), as changes reach production instantly after passing automated tests.
Option A (It automatically tests software code): Incorrect, as automated testing is a feature of continuous integration and continuous delivery, not unique to continuous deployment.
Option B (It enables users to benefit immediately from changes): Correct, as continuous deployment automatically pushes validated changes to production, delivering value to users without delay, unlike other CI/CD stages.
Option C (It predominantly uses staging environments): Incorrect, as continuous deployment minimizes reliance on staging environments, deploying directly to production.
Option D (It allows individual decisions about software releases): Incorrect, as continuous deployment eliminates manual release decisions, relying on automation for consistency.

NEW QUESTION # 23
[Understand the Key Concepts of Deployment Management]
Which of the following BEST describes the scope of deployment management practice?

- A. The practice includes deploying network hubs but not additional software licenses to the live environment
- B. The practice includes removing configuration documentation but not physical servers from the live environment
- C. The practice includes deploying network hubs to and removing applications from staging environments
- D. The practice includes updating service documentation and transferring it to the live environment

Answer: C

Explanation:
ITIL 4's deployment management practice encompasses moving hardware, software, and associated components into or out of environments (e.g., staging, testing, or production) to support service delivery. Option A, which includes deploying network hubs (hardware) and removing applications from staging environments (software), accurately reflects this broad scope across the service lifecycle.
Option A (The practice includes deploying network hubs to and removing applications from staging environments): Correct, as it covers both hardware and software movements across environments, aligning with ITIL 4's definition of deployment management.
Option B (The practice includes updating service documentation and transferring it to the live environment): Incorrect, as updating and transferring documentation is part of knowledge management, not deployment management.
Option C (The practice includes removing configuration documentation but not physical servers from the live environment): Incorrect, as deployment management includes moving physical servers, and configuration documentation is managed elsewhere.
Option D (The practice includes deploying network hubs but not additional software licenses to the live environment): Incorrect, as software licenses may be part of deployment if required, and the option arbitrarily limits the scope.

NEW QUESTION # 24
......

Our ITIL-4-Practitioner-Deployment-Management study materials are written by experienced experts in the industry, so we can guarantee its quality and efficiency. The content of our ITIL-4-Practitioner-Deployment-Management learning guide is consistent with the proposition law all the time. We can't say it's the best reference, but we're sure it won't disappoint you. This can be borne out by the large number of buyers on our website every day. And our pass rate of our ITIL-4-Practitioner-Deployment-Management Exam Braindumps is high as 98% to 100%.
