Latest SAP C_S4TM_2023 Exam Preparation | C_S4TM_2023 Real Exam

Our C_S4TM_2023 practice engine has collected the frequent-tested knowledge into the content for your reference according to our experts' years of diligent work. So our C_S4TM_2023 exam materials are triumph of their endeavor. By resorting to our C_S4TM_2023 practice materials, we can absolutely reap more than you have imagined before. We have clear data collected from customers who chose our training engine, the passing rate is 98-100 percent. So your chance of getting success will be increased greatly by our C_S4TM_2023 Exam Questions.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management Sample Questions (Q67-Q72):

NEW QUESTION # 67

Which of the following can you use to determine a stage sequence in a forwarding order? Note: There are 2 correct answers to this question.

- A. Shipping type
- B. Stage profile
- C. Stage type
- D. Movement type

Answer: B,D

Explanation:

In SAP S/4HANA Transportation Management for LSPs, the stage sequence in a forwarding order defines the transportation legs (e.g., pre-carriage, main carriage). According to the SAP documentation, the stage sequence can be determined using:

* Stage profile (A): A stage profile defines the sequence of stages for a forwarding order based on predefined rules, ensuring consistency across similar orders.

* Movement type (C): Movement types specify the type of transport (e.g., road, rail) for each stage and are used to determine the stage sequence in forwarding orders.

The other options are incorrect:

* Stage type (B)defines attributes of individual stages but does not determine the sequence.

* Shipping type (D)categorizes the overall transport mode but does not control stage sequencing.

NEW QUESTION # 68

In the logistics integration profile, the Incoterm location stage building is set to "Source location to Incoterm location- type 1". You create a sales order in which you specify an Incoterm and Incoterm location. What will be the result of these settings?

- A. Two stages created: An active stage from the source location to the Incoterm location, and an additional non-planning-relevant stage from the Incoterm location to the destination location
- B. One stage created: An active stage from the source location to the Incoterm location
- C. One stage created: An active stage from the Incoterm location to the destination location
- D. Two stages created: An active stage from the Incoterm location to the destination location, and an additional non-planning-relevant stage from the source location to the Incoterm location

Answer: D

Explanation:

In SAP S/4HANA Transportation Management, the logistics integration profile defines how stages are created based on Incoterms and Incoterm locations specified in a sales order. When the setting is "Source location to Incoterm location - type 1," the system creates stages as follows:

* Anactive stage from the Incoterm location to the destination location, which is planning-relevant and managed in transportation management.

* Anon-planning-relevant stage from the source location to the Incoterm location, which is created for documentation purposes but not actively planned in SAP TM.

According to the SAP documentation, this configuration reflects the Incoterm responsibility split, where the Incoterm location marks the point where responsibility shifts (e.g., from seller to buyer). Thus,two stages are created (B): one active stage for the transport leg after the Incoterm location and one non-planning-relevant stage before it.

The other options are incorrect:

* AandDonly account for one stage, ignoring the additional non-planning-relevant stage.

* Creverses the active and non-planning-relevant stages, which does not align with the "type 1" setting.
